ACKNOWLEDGEMENT

This magazine reflects the collective journey of the Batch of 2022–2026, bringing together our experiences, achievements, challenges, and memorable moments that shaped our time in the Electrical and Electronics Engineering Department. It stands as a testament to our growth, learning, and the bonds we built along the way.

We extend our sincere gratitude to the Head of the Department, Dr. C. S. Subash Kumar, for his continuous guidance, encouragement, and support throughout our academic journey. His leadership and motivation have been instrumental in the successful completion of this magazine.

We are also deeply thankful to Dr. Vasu, Dean and former HoD, for his constant mentorship, valuable insights, and inspiring presence that guided us both academically and personally.
Our heartfelt thanks to all the faculty members and staff of the department for their unwavering support, dedication, and commitment to nurturing our knowledge and skills. Their contribution has played a key role in shaping this publication.

We would like to appreciate our batchmates from the Batch of 2022–2026, whose enthusiasm, teamwork, and creative inputs have made this magazine possible. Every effort has contributed to making this a meaningful and memorable work.

Finally, to our juniors, this magazine is created keeping you in mind. We hope it serves as a source of inspiration, guidance, and encouragement as you begin and continue your journey.

THE HOD'S INSIGHT

Head Of Department

It gives me immense pleasure to present the **EEE chronicles magazine** for the batch **2022-26**. This magazine is a reflection of their dedication, placement experience and achievements of our students.

This magazine is not just a collection of articles and memories—it is a testament to the journey of learning, growth, and collaboration. Each page captures the enthusiasm, talent, and spirit that define this batch. I am proud to see how our students have balanced academic excellence with co-curricular and extracurricular accomplishments.

In today's rapidly evolving world, technical knowledge alone is not sufficient. Skills such as innovation, teamwork, leadership, and adaptability are equally important. I am confident that this batch has developed these qualities and is well-prepared to face future challenges with confidence and integrity.

I congratulate the editorial team and all contributors for their sincere efforts in bringing out this wonderful magazine. Your work will remain a cherished memory for years to come.

I extend my best wishes to all students for a bright and successful future. May you continue to strive for excellence and make meaningful contributions to society.

Dr.C. S. Subash Kumar

Associate Professor

& HOD (i/c)

Echoes from the Tutor

Dr. Suresh B

It's my great honor to step into the EEE magazine of the batch 2022-2026.

As you complete your course and prepare to leave the campus, I extend my heartfelt congratulations to all of you on reaching this significant milestone.

Though you are leaving the campus, the memories in the department, friendships, especially industrial visits (IV's), Association activities and the experiences you have built here will always remain a part of your life.

Your journey here has been one of the learnings, which develop your growth and determination. You have not only gained academic knowledge but also the technical skills, leadership quality in all matters, time commitment and values that will guide you in your future. As you step out into the world, face every challenge with confidence and continue to struggle for excellence in all that you do. Stay connected and keep doing all your work that makes you and us proud.

Wishing you success, happiness and a bright future ahead.

*****எல்லாம் நன்மைக்கே...*****

Echoes from the Tutor

Dr.C.V.Pavithra

To my wonderful students, college life is another chapter in your book of life. I hope you have ended this chapter with everlasting memories, friendships, and valuable lessons from this institution. While engineering institution is meant for academics and placements, true success is not only reaching top grades in academics and getting placed in company with higher LPA. It's always about being better than you were yesterday.

We believe you students have immense potential, and what is needed is to step out of your comfort zone. As tutors, we know, this class as any other conventional batch has students of all categories like software enthusiast, entrepreneurs, youtubers, creative thinkers, artists, dancers, singers, future government servants, sportsperson, literary writers, and so on. Unfortunately, many have not showcased your talent in the right platform. Your incredible talents remained as hidden gems. But, still you have miles to go. Go beyond your comfort boundaries and make us proud.

You students are basically compassionate individuals; all are kind enough to join hands with faculty in organising events, donate blood to the needy, and serve others with empathy. Personally, I enjoyed handling course for your class and the comfort your class gave during industrial visit. Also, I could not avoid mentioning this; your class has steered these four years with minimal physical attendance, creative excuses with letters downloaded from Chatgpt and maximum last-minute panic always. Actually, the greatest adventures are yet to come. Embrace it with open arms. No matter where life takes you, remember that your teachers believe in you.

My heartfelt greetings to the editorial team and all those who contributed in bringing out this wonderful magazine. We always feel pride in the milestones you achieved and waiting to cherish many more laurels.

With heartfelt blessings,
C V Pavithra

Echoes from the Tutor

Dr Mohamed Iqbal M

Dear Students,

As a mentor of the class, I feel proud to write this message with immense happiness as you complete an important chapter of your life and step into a new journey. Over the past four years, I had an opportunity to interact with you all as a mentor, course instructor, and project coordinator. Watching your growth from curious first-year students into confident young professionals has truly been a rewarding experience for me.

College life is much more than classrooms, laboratories, assignments, and examinations. It is a journey of learning, self-discovery, friendship, teamwork, and personal growth. During these years, each one of you would have faced many challenges, worked through difficulties, learned from mistakes, and achieved milestones that once seemed impossible.

As you move forward into higher studies, careers, research, entrepreneurship, or other paths, always remember that success is not measured only by position, salary, or achievements. True success lies in maintaining integrity, humility, discipline, and compassion while pursuing your goals. Technical knowledge may help you build a career, but values and character will help you build a meaningful life.

I also encourage you to remain connected with your friends, teachers, and the institution that has been part of your journey. The memories you created here, the friendships you built, and the lessons you learnt will stay with you forever.

I sincerely thank all of you for your respect, cooperation, enthusiasm, and contributions throughout your academic journey.

May your future be filled with success, happiness, good health, and endless opportunities. May you continue to achieve great heights and make your family, institution, and society proud.

Wishing you all the very best for a bright and successful future.

With warm regards,
Dr Mohamed Iqbal M

BEML LIMITED

BANGALORE

aishu30th@gmail.com

9361238787

About the company

BEML Limited is a Government of India Public Sector Undertaking under the Ministry of Defence. BEML is known for manufacturing heavy equipment including defence vehicles, metro coaches, railway wagons. It operates through three major business verticals. Defence and Aerospace, Mining , Rail and Metro serving both domestic and international markets.

I secured an opportunity as a Graduate Trainee Engineer at BEML Limited through an off-campus process after completing my internship there. I showed interest in understanding real-time industrial processes and stayed actively involved in the tasks assigned to me. This experience improved my practical knowledge and confidence, which eventually helped me secure this role.

The universe often aligns opportunities with the effort and focus we invest. Being clear about our goals, staying consistent, and embracing challenges along the way helps us move closer to what we truly aim for.

AKASH KUMAR K

TCS

ak05akashkumar.k@gmail.com

9385487196

I have a strong interest in cybersecurity and enjoy exploring different areas within it. With that interest, I participated in the TCS HackQuest hiring process.

ROUND 1: Online CTF challenge

- Date: December 13, 2025 (10.00 am to 4 pm)
- Duration: 6 hours
- Total Questions: 12 + 2 additional questions added at the last minute

Solved 7 questions and submitted a detailed walkthrough for each within 1 hour.

ROUND 2: Proctored CTF challenge

- Date: January 17, 2026
- Duration: 3 hours
- Total Questions: 8

Solved 3 questions and demonstrated approach for 3 more (without final flags).

ROUND 3: Interview

- Shortlisted on: February 19, 2026
- Mode: Physical interview at TCS office

The interview was conducted with both technical and HR panels virtually and lasted around 30+ minutes. It started with my introduction, followed by technical discussions.

Technical Questions

1. Explain the open redirect vulnerability you found (NASA/Grafana case)
2. What is CVE?
3. What is a firewall?
4. Scenario: If an attacker exploits SQL Injection in a website, what will you do?
5. Is validation and sanitization enough to prevent SQLi?
6. What is a honeypot?
7. Do you have experience in SAST and DAST?
8. What is a null session?

HR Questions

1. Why do you want to work in TCS?
2. Who is the CEO of TCS?
3. Who is the CEO of Google and Microsoft?
4. If you get offers from Microsoft and TCS, which one will you choose?

Final Outcome

Received the offer on March 10 and got selected as Assistant System Engineer – Trainee in the Cyber Security Practice (CSP) unit.

Every train reaches its own destination.

AKSHAYA D

Throughout my academic journey, I have always believed in continuous learning, growth, and self-improvement. With a strong interest in higher studies and research, I constantly tried to expand my knowledge beyond academics and build a strong foundation for my future career.

I actively participated in various internships that helped me gain practical exposure and industrial experience in core technical domains. Along with academics, I was also a part of the Student Union, NCC, and the Velocitor Racing Club, where I developed leadership, teamwork, discipline, and communication skills through different activities and responsibilities.

I also worked on multiple core-based projects that strengthened my technical knowledge and problem-solving abilities. Every experience, challenge, and opportunity throughout these years has helped me grow both personally and professionally, making this journey truly memorable and meaningful.

BELIEVE IN YOURSELF

AKSHAYAKANNAA S

HYUNDAI MOTORS

CHENNAI

akshayakannaa2005@gmail.com 7418727799

ROUND 1 - Online test

The first round was an online assessment conducted on the AON platform, designed to evaluate both aptitude and behavioral traits in a gamified format. The total duration was 75 minutes, covering multiple sections (5 Sections).
The test included Hyundai Campus Assessment 2025 (situational judgment), Deductive Reasoning (logical problem-solving), and Inductive Reasoning (data and pattern analysis). It also featured a gamified Complex Planning (Motion Challenge) to assess planning skills, along with ADEPT-15, a personality assessment evaluating behavioral traits and company fit.

ROUND 2 - Group Discussion

The Group Discussion was conducted in mixed batches (Different department students are in same batch) with a duration of 15 minutes (including preparation time). The topic was “Will AI Replace Human Jobs?”
I initiated the discussion, contributed a few key points, and concluded by summarizing the overall discussion. I emphasized that while AI may replace repetitive tasks, human roles involving creativity and decision-making will continue to be important.
This round mainly evaluated communication skills, confidence, teamwork, and clarity of thought. It is also a mass elimination round, so strong participation is essential.

ROUND 3 - Strategic Pitch Presentation

Around 35 students were shortlisted from the Group Discussion for this round. We were given an on-spot topic “How you will get motivated for repetitive tasks?” and asked to prepare a 3-slide presentation in 15 minutes, then present it to the panel within 5 minutes.

I created a simple presentation with an introduction, main points, and a conclusion. I used visuals to make it clear and engaging and explained my ideas step-by-step in a structured manner.
This round mainly tested presentation skills, creativity, time management, and clarity of thought. At the end, around 15 students were shortlisted for the next round.

ROUND 4 - Technical + HR Interview

Around 15 students were shortlisted for this round. It was a 40-minute interview with a panel of 3 members (1 HR and 2 technical interviewers). I was assigned to the EEE panel, where 5 students (including me) were interviewed.
The interview began with HR questions and then moved to technical questions focused on Electric Vehicles and core electrical concepts.

Sample Questions:
HR: (Basic HR and situational questions)

- Can you introduce yourself?
- Can you explain your family background?
- Can you describe a situation where you were asked to do something unethical?
- Can you share a mistake you made and how you handled it?
- What motivates you to join Hyundai?

Technical: (Fundamental and core technical knowledge)

- What is your opinion on the future of Electric Vehicles?
- What types of motors are used in electric vehicles?
- Can you explain the working of PMSM?
- How does a BLDC motor work and is it AC or DC?
- Can you draw and explain the block diagram of an electric vehicle?
- What is a Battery Management System (BMS) and what is its role?
- What are SOC and SOH in batteries?
- What is cell balancing and what is the difference between active and passive balancing?
- What types of batteries are available and which is commonly used in EVs?
- Why are lithium-ion batteries preferred over lead-acid batteries?
- What is the difference between a rectifier and an inverter?
- What are the formulas for DC power, single-phase, and three-phase AC power?
- What is power factor and why is it important?

ROUND 5 - HR Interview

The final round was a short HR interview (around 10 minutes) and was slightly stress-based. This round was conducted by a different HR interviewer compared to the previous round.
The interviewer asked questions about my family background, my experience in the interview process, and how I would respond if I was not selected. I was also given a numerical aptitude question to solve on the spot. Some questions were repeated in a different tone to check my consistency and confidence.
Overall, this round was about my behavior, confidence, and how well I handle stressful situations.

By 9:15 PM on the same day, the final results were announced and offer letters were given to 4 selected students (1 Mechanical, 2 EEE, 1 Civil), including me. The other three selected students were from PSG Tech.

AMALAN JOSEPH J

HIGHER STUDIES

amalanblogger@gmail.com

8760272140

Academic Profile

I would like to share a brief overview of my academic journey, with a focus on maintaining consistency over time.

I secured an 85 percentile in CAT and achieved an All India Rank of 8899 in GATE. I was also selected for the NPTEL Pre-doctoral Fellowship at IIT Madras, which strengthened my inclination towards research and higher studies.

Alongside this, I have been actively involved in research, with a total of 8 conference publications. Among these, 3 papers are indexed in IEEE Xplore (Scopus indexed), and 2 are indexed in Springer series.

To build strong conceptual foundations, I completed 11 NPTEL courses, including 7 courses of 12-week duration and 4 courses of 8-week duration. I was awarded 3 Silver Medals and received the “NPTEL Believer” and “NPTEL Enthusiast” recognitions for consistent academic performance.

My GATE preparation began in the 6th semester, where I focused on core subjects such as Electrical Machines, Power Systems, Control Systems, Network Theory, and Signals and Systems. Instead of covering topics superficially, I concentrated on conceptual clarity and structured problem-solving.

Engineering Mathematics and Aptitude served as scoring areas, where consistent practice and strong fundamentals helped improve overall performance.
Maintaining consistency across CGPA, research work, and competitive exam preparation played a key role in building a balanced academic profile.

Interview Experience

As part of the NPTEL Pre-doctoral Fellowship selection process, the interview focused on evaluating core technical understanding rather than theoretical recall. The discussion centered on DC–DC buck converters, particularly in the context of isolated high-frequency DC–DC conversion. I was asked to explain the operating principles, analyze waveforms at the switching node and across the output load, and discuss the design and role of filters in DC–DC converters.

A key aspect of the interview was the ability to visualize circuit behavior—understanding how switching affects voltage and current waveforms, and how filters smooth these variations to achieve desired output characteristics.

This experience highlighted that interviews for research-oriented roles require more than subject coverage. They demand clarity in fundamentals, the ability to interpret waveforms, and the capacity to justify design choices.

Key Takeaways:

- Focus on understanding how circuits behave, not just how they are derived.
- Practice waveform analysis and relate it directly to switching actions.
- Study each component in a circuit in terms of its functional role—how it influences overall system performance rather than viewing it in isolation.
- Analyze how variations in components (inductance, capacitance, switching frequency, load) affect ripple, efficiency, and dynamic response.
- Be prepared to explain concepts clearly, including cause–effect relationships in circuit operation.
- Strengthen fundamentals in high-weightage and application-oriented topics.

The transition from studying concepts to explaining and applying them is critical for success in technical interviews.

AMITA ANAND

ACIES GLOBAL

CHENNAI

amita26anand@gmail.com 8300734200

ACIES GLOBAL

ROUND 1

The first round was the online assessment. It was written on 27th October 2025. It was an aptitude and behavioral round. The aptitude had psychometric, numerical ability and data interpretation questions. It had seven different sections consisting of questions from basic to advanced level. Each section was timed. After completion of the seven sections, the test navigates to the behavioral questions. Behavioral questions were not timed. It is an eliminatory round.

ROUND 2

I got shortlisted and received mail on 30th October 2025. The second round was group discussion. It took place on 31st October 2025. It is an eliminatory round. The group discussion was in virtual mode. As it was a pool placement, students from PSG Tech, Christ university, SRM university and Jain university were mixed in each panel. In my panel there were 8 students and 2 company officials. The GD topic was “Do we think less when technology thinks of us”. The discussion took place for 30 minutes. Communication skills, listening to others, handling other’s opinion and expression of ideas are mainly evaluated in this round.

ROUND 3

On 1st November 2025 I got shortlisted for the coding assessment and received the mail shortly on the very same day. The coding assessment had 3 sections comprising 16 MCQs each. A total of 48 questions which were timed. It was based on SQL queries, python implementations, operating systems and database management systems. This was a non-eliminatory round.

ROUND 4

I got a call from the company and was shortlisted to attend the upcoming rounds on 4th November 2025. Both the leadership and the technical interview were scheduled for 5th November 2025, leaving one hour gap between the two interviews. Both Interviews were eliminatory rounds. Technical interview started with self-introduction. There were two interviewers in the panel. I was asked to explain two projects and lead on questions were asked from them. I was asked several questions from my AOI (Machine learning and DBMS). I was asked to code a custom problem given by the interviewer. I was also asked to answer certain code outputs. Basic questions from SQL and python were given importance.

ROUND 5

On the same day of the technical interview on 5th November 2025 I had my leadership and HR interview. There were two interviewers in the panel. The questions mainly circulated in situation and scenario-based questions. My roles in projects were asked to be described. I was asked to describe my time management between Major Degree, Minor Degree and extracurricular activities. Communication was evaluated. Questions regarding family members and their occupations were asked. The job location was also discussed during this interview. On 6th November 2025 I got a mail from the company stating that I was shortlisted based on my performance and should wait for last round of the selection process and its final confirmation.

ROUND 6

On 13th November 2025 I was asked to take a short video regarding the Job role fit and uniqueness of me for the specific role with a brief introduction. A four-day deadline was given for this submission. On 21st November 2025 I got the official mail from the company that I have been shortlisted as a part of the recruitment process and the offer letter along with the job location will be shared within the end of the upcoming week. I was asked to submit a google form with all documentations before 23rd November 2025. On 29th November 2025 I received the Offer letter from the company.

“Where you are right now is a part of where you are meant to be”

ASHAF M

AMD

BENGALURU

ashaf2801@gmail.com

9043486267

ROUND 1 - Online Technical Test

The first round was conducted in our campus. There was no aptitude section. The focus was completely on technical knowledge and coding.

Pattern: *(15 MCQs and 2 Coding Questions)*

MCQs were mainly from:

- Operating Systems
- Computer Networks
- C and C++ basics

General programming concepts

Coding Round:

- Two problems of LeetCode Medium level
- Both were based on string manipulation
- Coding was allowed in C and C++

I was able to solve one problem completely. For the second problem, my solution passed 3 out of 5 test cases. Later, during the interview, I asked that how I got shortlisted even though I didn't clear all test cases. They told me that resume quality and technical background were also considered, not just coding results.

Tip: Maintain a clean one-page resume. I recommend using Overleaf to create a professional resume.

ROUND 2 - Technical (DSA Round)

This round was conducted at Amrita campus. Around 30 students were shortlisted: 7 from PSG (2 from Tech, 5 from iTech) 23 from Amrita .

Topics covered:

- Linked List
- Doubly Linked List
- Circular Linked List
- Backtracking
- Dynamic Programming

They asked around 10–12 problems, mostly easy to medium level. I preferred coding language in Java, and that was completely fine. They also asked about my C/C++ knowledge, and I told them that while I know C/C++, but Java is my comfort language.

ROUND 3 - Technical Interview (Virtual)

Only 14 candidates were selected for this round.
The interview was taken by a technical person who later became my manager.
Discussion topics:

- My projects
- Where and how I trained the ML model for my project
- CUDA basics
- Sorting algorithms (asked to write on paper and to explain)
- Operating Systems basic
- Bootloader
- Computer Networks basic
- Linux command
- They asked what I know about cloud computing based on my resume.

Some candidates had one more DSA round, but around 8–9 students were directly moved to HR.

ROUND 4 - HR Interview

This was a simple and friendly discussion.
They asked about:

- Self Intro
- My Family background
- Willingness to work in different locations (Delhi / Hyderabad)
- Higher studies plane

I mentioned that whatever I've learned so far is through self-learning, and I prefer gaining industry experience rather than going back to college. The HR appreciated this answer. Although other locations were discussed, I was finally allocated Bangalore.
Out of all candidates: 7 students were selected (5 from PSG and 2 from Amrita)

All the best jr, Trust the process

BALAJI V

EMR TAP CHANGERS

CHENNAI

balaji.v2862004@gmail.com

8248017180

Recruitment Type: Off-Campus

ROUND 1

Technical Interview (Telephonic) – Duration 15min

The first round was a technical interview conducted through a telephonic call. The interviewer began with a brief self-introduction, followed by questions based on Electrical Machines, Power Systems Analysis and Power Transformers.

➢ Overall Difficulty: Easy to Moderate
➢ Focus Area: Fundamentals + Project understanding

- Hands-on Project based Question which was mentioned in Resume
- What is Servo Motor?
- What are the motors similar to servo motor?
- Difference between Induction and Servo Motor
- Does Induction Motor with Encoder work similar to servo motor?
- Which motor is best Induction Motor with Encoder or Servo Motor?
- Difference between AC and DC Motor?
- What is a Power Transformer?
- Why Voltage is stepped up/down for Long Distance Transmission?
- What are the Power losses due to current and voltage in a Transformer?

ROUND 2

Round 2: Technical + HR Interview (Video Call) - Duration 15min

The second round was conducted through a video call and included both Technical and HR questions. The interview focused mainly on project work and power system fundamentals.

- Hands-on Project based Question which was mentioned in Resume
- What is Power Factor?
- Difference between Active and Reactive Power
- How is reactive power compensated?
- What is a capacitor and how it is used in Reactive power generation?
- How is Capacitor bank used for reactive power compensation in Power System?
- What is the Purpose of Capacitor in Capacitor start and Capacitor run motor used in household fan?
- If a battery of 4V is connected to the primary side of transformer then what will happen in the secondary side?
- Why DC Source can't used in Transformer?
- Difference between AC and DC Current

Final Outcome

The results were announced on the same day, and the offer letter was issued immediately.

You are not behind in life; you are preparing little longer than others.

BHARATH RAJ G

VOLTAS LIMITED

Coimbatore

rajb35624@gmail.com

8778631794

ROUND 1

The first round was an online assessment consisting of 60 questions to be completed within 60 minutes. The test was divided into four sections: Aptitude, Logical Reasoning, Verbal Reasoning, and Technical Core Concepts. The aptitude section mainly included quantitative topics such as percentages, ratio and proportion, profit and loss, simple and compound interest, averages, time and work, and speed, time, and distance. The logical reasoning section was very basic. The technical core section mostly included questions related to electrical machines. Overall, the difficulty level of the test was moderate, and time management played an important role. Candidates with clear basics and regular practice were able to complete the test efficiently.

ROUND 2

Technical Interview
Venue: Voltas Limited, Trichy Road
Date: 07.02.2026
The technical interview primarily focused on fundamental electrical engineering concepts. The session began with basic questions such as “What is an LED?”. Initially, I felt nervous; however, the interviewer helped me feel comfortable. The discussion then moved to topics like speed control methods of induction motors and basics of synchronous motors. I was also asked about changing the direction of rotation in motors. A numerical problem related to slip, frequency, and poles was also asked. I explained my Battery Management System project, including its objective, working, and applications. Although some of my answers were not completely correct, my communication was clear and confident throughout the interview.

ROUND 3

The HR interview mainly focused on communication skills, confidence, and personality.
The interviewer asked questions such as “Tell me about yourself,” “Where do you see yourself in the next five years?”, and “Are you willing to relocate?”.
I was also asked about my interest in the job role and my willingness to adapt to the company environment. The interviewer evaluated my clarity, attitude, and honesty in answering. Overall, the HR round focused more on personality and communication rather than technical knowledge.
They asked me about my family background and my willingness to travel to different locations for work.

RESULT

- The results were announced on 10.03.2026, and thankfully, I was selected. I was overwhelmed with happiness.

BRINDHA SHREE C C

HITACHI ENERGY

CHENNAI

brindhashreecc@gmail.com

9498425945

ROUND 1 - ONLINE TEST

The first round was held at PSG iTech Civil CAD Lab @11.30 am after the pre-placement talk through online mode(Via Microsoft teams).The round had only technical questions.It consisted of 60 Multiple choice questions to be completed within an hour. The questions were from core electrical concepts from the subjects like Transmission and distribution, Power systems, Electrical machines ,Protection and Switchgear (Both analytical and theoretical questions). Having a strong knowledge of core electrical concepts is important.

ROUND 2-TECHNICAL INTERVIEW

The technical interview was in physical mode and it happened at Amrita University Vidyapeetham,Coimbatore. There were many panels and my interview was conducted around 40-45 minutes. It was a pool placement drive.

The interviewer asked the following:

- The interviewer asked me how was I feeling and asked me not to stress about the interview process.
- Introduce yourself including your family background and hobbies (I mentioned my hobbies are playing sports and watching movies).Tell the components present in the substation. Which Equipment is present first in a substation(answer is lightning arrester)
- What is the voltage range of the substation?
- Normal Power Factor range that we use in real life
- How wave trap works, what happens if it is not present
- Ferranti effect and how it can be reduced
- Questions related to transformer losses, Reactive power
- What is breather and where it is present
- Functional Difference between IGBT and MOSFET
- Difference between diode and thyristor, capacitor and inductor.Protection schemes,CT,VT
- From my courses that I mentioned they asked about Etap and Matlab,Plans of marriage
- Working at a remote place

Then they asked me whether I had any questions and I asked them two questions about the company.(Tip: Always ask interesting questions to the interviewer to showcase your eagerness towards the company)

ROUND 3-HR INTERVIEW

The HR Interview was conducted in physical mode on the same day and everyone who attended HR interview said the questions were managerial,behavioral and general. But for me, a few technical questions were also asked, so be prepared for any type of questions in the interview.
There were two interviewers and the questions asked were:

- Introduce yourself along with family background
- What type of DC motor is used in trains and why?(Answer: DC Series due to high torque)
- Can DC motor be converted into DC generator(yes, by reversing the supply)
- What happens if the DC series motor runs on no load?(motor runs at dangerously high speed, current and flux decreases)
- What is your strength and weakness? How have you been working on your weakness?
- You have good CGPA,why don't you go for higher studies?
- If things don't go according to your plan, then what will be your response?

Then I asked the interviewers two questions and It was informed that the results will be declared later.

RESULTS

The results were announced on 6th November 2025, and Thankfully I was selected as a student intern for a period of 6 months, with a potential full-time role offered based on performance.

DEAR JUNIORS, I would like to tell you that even if you start late don't worry but make sure that you don't give up soon. For any doubts don't hesitate to get in touch with me. All the best for your placements.

"What is yours will always find you"

COKESHKANNA S T

TCS

CHENNAI

stcokeshkanna2004@gmail.com 9843270065

ROUND 1

Date : 13-11-2025
Duration : 3 hrs
Venue : iON Digital Zone iDZ Kovilambakkam , chennai.
First round consists of two sections Aptitude and Coding.

- Aptitude - This section covers importatnt topics like speed, Time, Distance, Directions , Trains, Boats & Streams Problems.
- Coding - It consists of questions from arrays , strings , matrices, pattern problems

There are totally three roles (Ninja, Prime and Digital)

- For Prime & Digital → Coding is deciding factor
- For Ninja → Can be selected only through the aptitude section

ROUND 2 - Technical + HR

Date : 21-01-2026
Venue : PSGCT
Duration : 30 minutes

After clearing the test, I was shortlisted for the interview round. The interview was conducted virtually and lasted around 25–30 minutes.
The interview started with a brief introduction. I was asked to explain my academic background and my projects. I explained my project including the objective, methodology, and the technologies used. Though your project is based on core , be clear and confident in your explanation.

The interviewer then asked basic questions from C programming such as:

- Difference between call by value and call by reference
- Concepts of pointers
- Simple Programs such as palindrome, armstrong number

I was also asked a few questions from DBMS and basic computer science concepts.

In the HR part, I was asked questions like:

- Why TCS?
- Are you willing to relocate?
- What are your strengths and weaknesses?

The interview was mostly focused on checking my fundamentals and communication skills. The interviewer was friendly and gave me enough time to think and answer.

Overall, the experience was smooth and positive. I realized that having strong basics and explaining concepts clearly is more important than knowing advanced topics.

Key Takeaways

- Focus on fundamentals (C, DBMS basics)
- Be confident while explaining your project
- Stay calm and think before answering

Result

Finally, the results came out on February 2, 2026, and I got selected for the Ninja role. I also received the offer letter the following day.

“Motivation fades. Consistency compounds.”

DHAKSHATHA S B

HITACHI ENERGY

CHENNAI

dhakshathaprasanna@gmail.com 6379097023

ROUND 1

The first round was conducted in Civil CAD lab, PSG Itech preceded by a pre-placement talk conducted by the company. The test was conducted for 60 minutes. There were 60 MCQ questions covering subjects such as

- Protection and Switchgear
- Power System Analysis
- Transmission and Distribution
- Electric Machines

Difficulty of the questions: Easy-Medium. (A few numerical question were present) The shortlist was announced on 13th October, 2025. Fortunately, I was shortlisted for the second round.

ROUND 2

The Second round was conducted in Amrita Visva Vidyapettam, Coimbatore. It was a pool placement. The second round was a technical interview. My interview was conducted over 30-40 minutes. Two people conducted my interview. They were very experienced and friendly. They asked me to introduce myself and briefly talk about the projects I did in college.

These were the following questions asked in the interview:

1. What are the types of circuit breakers?
2. What is a MCCB circuit breaker? (I mentioned this circuit breaker in my answer)
3. What is a relay?

a. They asked me to draw the relay circuit as a follow up question.

4. What are the types of electrical machines?
5. They asked me if I've visited any substation and asked questions based on that. (I visited Arasur Substation)

a. Ratings of the sub station?

b. Asked whether the substation is an Air insulated or Gas insulated substation? (It is a Air insulated Substation)

c. Components present in the substation?
d. What is a surge arrestor?
e. What is the difference between a surge arrestor and isolator?
f. What is a transformer?
6. What is the difference between a motor and generator?
7. Why is the voltage being stepped up in the primary transmission?
8. Types of power generation?
9. They asked me to draw the transmission and distribution diagram of power transmission.
a. They asked me to explain it.
10. They asked me to explain the working of a BLDC motor and explain it with a drawing
They asked questions from my soft skills. As I've included time management as my soft skill. They asked me how I manage my time while doing many tasks at once.
I was selected for the HR Round.

ROUND 3

The HR Round took place in the afternoon session. The interviewer was friendly and asked me to introduce myself, explain my projects, and my family background. The interview took around 10-15 minutes. These were the following questions asked in the HR round:
1. Why did you pursue EEE degree?
2. Will you pursue a Masters?
3. Where do you see yourself in five years?
Later I asked him three questions regarding the company products and their aim towards sustainability. The results were declared on 6th November, 2025. Fortunately, I was selected as a student intern with a potential conversion after 6 months.

Things to note while preparing for placements:
1. Have a basic fundamental knowledge both in core and coding.
2. Practice aptitude earlier. Sites such as Free feel to learn, Indiabix would help.
3. During interview rounds, try to answer questions for at least 45-60 seconds.
4. Be confident while answering questions.
5. Have an in-depth understanding of your projects.
6. Be mindful of the contents you are adding in your resume and be confident with your resume
7. Have a basic understanding in all the subjects, as in some companies, the questions they ask may cover all the subjects.

"Somewhere, something incredible is waiting to be known."

DHANESH GHANTHAN C

dhaneshghanthanpdm@gmail.com 7418938872

Looking back at my college journey, I realize it has been more about understanding myself than simply following a fixed path. While many focused on placements and achievements, I chose to explore my interests and build my knowledge at my own pace. This helped me gain clarity about my strengths and what I truly enjoy learning.

I spent time strengthening my fundamentals in my core subjects and worked on a few projects that helped me apply concepts practically. This approach made my learning more meaningful and gave me confidence in my abilities.

Apart from academics, I was actively involved in club activities, which gave me opportunities to interact with different people and learn new skills. Being part of these activities helped me step out of my comfort zone and understand the value of teamwork.

One of the most memorable parts of my journey has been the time spent with friends. I learned a lot from them—not just academically, but also about life, perspectives, and handling situations. These experiences have shaped me into a more confident and self-aware individual.

ROUND 1 -ONLINE TEST

Round 1 was an online MCQ-based test conducted on 9th September 2025 at PSG College of Technology via the DoSelect platform from 5:00 PM to 6:00 PM. The test consisted of 60 questions divided into verbal ability, logical reasoning & quantitative aptitude, and technical sections. The verbal section (15 questions) focused on basic English skills like reading comprehension, synonyms, and antonyms with an easy to moderate difficulty level. The aptitude section included topics such as profit and loss, compound interest, number series, and LCM/HCF, with mostly concept-based questions that were manageable with good time management. The technical section (30 questions) mainly covered power systems, especially bus systems and transmission and distribution, along with a few questions from IoT, electrical machines, and power factor. Overall, the test emphasized fundamental concepts rather than complex calculations. The evaluation was based MCQ scores, and the results were announced on 10th September 2025 at around 5:00 PM.

ROUND 2-TECHNICAL INTERVIEW 1

Duration: Approximately 1 hour and 20 minutes

The technical interview was conducted with a strong focus on my core areas of interest mentioned in my resume—power electronics, electrical machines, and programmable logic controllers (PLCs). Most of the questions were concentrated on electrical machines and power electronics. The interviewer, who was the head of the manufacturing department (electrical), evaluated not only my answers but also my depth of understanding through continuous follow-up and counterquestions. He frequently asked whether I was confident in my responses, thereby assessing my clarity of concepts and confidence level throughout the interview.

1. Explain the working principle of an induction motor and how a rotating magnetic field (RMF) is produced in it.
2. How is the resultant magnetic field obtained in an induction motor, and what is synchronous speed? Also write its formula.
3. Differentiate between a permanent magnet synchronous motor (PMSM) and an induction motor.

4. Draw a sinusoidal waveform and explain peak, mean, and RMS values along with related numerical problems.
5. Explain star and delta connections and the importance of √3 in line and phase voltages and currents, including related numerical problems.
6. What is power factor, why is it important, and what is its effect on power systems?
7. Draw a parallel RLC circuit, explain its operation, and describe how its impedance is calculated.
8. Draw and explain phasor diagrams for various loads and state the conditions under which current leads or lags voltage.
9. Explain the working principle of a buck converter, including the role of the inductor and capacitor.
10. Explain the current flow during ON and OFF states of the switch in a buck converter and mention which converter was used in your project with justification.
11. Draw a MOSFET and explain it, including its use as an amplifier circuit.
12.Draw a BJT biasing circuit and explain the purpose of biasing.
13. Which role do you prefer: research & development (R&D) or manufacturing, and why are you interested in manufacturing?
14. What is the reason for not opting for higher studies?
Overall it was purely technical questions based on my areas of interest. The follow-up questions mostly depend on what you say so be clear and confident with what you say

ROUND 3-TECHNICAL INTERVIEW 2

I was shortlisted for Round 3, which was conducted at around 3:30 PM and lasted approximately 30 minutes. The interview focused on technical knowledge, analytical and real-world reasoning, communication skills, and overall personality and attitude. The interviewer began by reviewing my Round 1 performance report and asked me to introduce myself without mentioning my name. I was then given three analytical questions with one minute of thinking time for each and was instructed to answer continuously without interruption. The questions included identifying possible reasons for pressure cooker failures in the market, suggesting five alternatives if a vehicle breaks down at 1:00 PM with a deadline to reach the destination by 7:00 PM, and explaining common causes of induction motor failures. Additionally, a technical question was asked about the type of insulation material used in an induction motor. The interview also included HR-related questions about ongoing courses or certifications, the reason for not pursuing higher studies despite good academic performance, my family background, and whether I had any questions. At the end, I asked about areas for improvement in my professional and technical skills, which the interviewer appreciated, as it demonstrated self-awareness and a positive learning attitude.

ROUND 4-HR ROUND

I was shortlisted for the HR round, with results announced at around 5:30 PM, and my interview was scheduled at 6:30 PM the same day. The 45-minute interview was conducted by a panel of three members from Mechanical and EEE departments. The interaction was friendly and focused on my background, career goals, and alignment with the organization, with an emphasis on honest and genuine responses.

1. Please introduce yourself and explain why you chose Electrical and Electronics Engineering (EEE) over coding/software roles or Mechanical Engineering.
2. Differentiate between an induction motor and a BLDC motor, and mention which electrical machine you like the most.
3. Do you know about a Variable Frequency Drive (VFD)? Explain its basic working principle.
4. Which is your best project, what challenges did you face, and what improvements have you made?
5. What is your final year project, have you finalized the title, and why did you choose it?
6. Why do you want to join our company, what do you know about our products, and which role in manufacturing are you interested in?
7. What are your role preferences, what challenges do you expect, and where do you see yourself in five and ten years?
8. Which other companies have you attended interviews with, why didn't you opt for higher studies, and would you pursue it if sponsored?
9. Tell us about your family background, your hostel life experience, and whether you would miss home if placed here.

During the final minute, the panel conducted a brief stress interview to assess my response under pressure. The interview concluded on a positive note, and I was asked to wait for the results. The final results were announced the next day, 12th September 2025, at around 4:30 PM, and I was selected.

Trust yourself—your confidence speaks louder than words. Be patient and wait for the right moment; when the perfect opportunity comes, it will find you. What is meant for you will never pass you by, so stay prepared and keep believing. Best of luck to all!

"I don't chase, I attract. What belongs to me will simply find me."

DHARSHINI S

TVS MOTOR

HOSUR

dharshinisaravanan20@gmail.com 8610472933

ROUND 1 - Online test

Date: 23rd Jan, 2025
Venue: Any location
Scheduled time: 7:00 PM-8:00 PM (60 min)
The test link was shared to our personal/official mail IDs (registered IDs). The online test consisted of both technical and aptitude questions in MCQ format. Within the one hour, there were multiple sections, and each section had a specific time limit. Once the time for a particular section was over, we were not allowed to go back to the previous section. For the technical part, the questions were mainly based on the basics of core electrical subjects, so having a clear understanding of fundamental concepts was important.
Before taking the test,

- Ensure a stable internet connection
- Dress professionally
- Take the test in a calm and quiet environment.

Based on this test, the result came on 4th Feb, 2025. 12 students from EEE and 10 from ECE were shortlisted for the next round.

ROUND 2 - Gaming round

The second stage of the selection process was a gamified online assessment conducted on the Nautics platform. It focused on evaluating presence of mind, logical thinking, and quick decision-making rather than technical skills. The assessment was held on 4th February 2025 from 7:00 PM to 10:00 PM, with a duration of 90 minutes and could be taken from any location. The objective was to answer as many questions correctly as possible within the time limit. Results were announced on 13th February 2025, where 5 students were shortlisted and 4 were waitlisted for the physical interview.

FINAL ROUND— Interview

Date: 25th Feb, 2025
Venue: PSG iTech placement cell
Technical Interview:
First, I was asked to introduce myself. After that, the interviewer asked me to explain my two projects mentioned in my resume.
I explained both my projects in detail, and then he asked a few questions, such as the following:

- What are the real-life applications of your project?
- What is new or innovative in your work?
- What challenges did you face, and how did you solve them?

Almost half of my interview was based on my projects, which helped me feel more confident. Then the interviewer shifted to technical questions related to electric vehicles (EVs). Some of the questions asked were:

- What type of motor is used in EVs?
- Explain the working of a BLDC motor.
- Comparison between a normal motor and an EV motor.
- What is a Battery Management System (BMS)?
- What is cell balancing?
- Types of cell balancing.
- What is a PCB, and explain it in detail.

After completing all the technical questions, the interviewer asked, “Do you have any questions?”
I took this opportunity and asked,
"Once we get selected for the internship, what kind of work and learning opportunities can we expect?”
The interviewer appreciated my question and briefly explained that interns would get exposure to real industrial projects and practical learning in their respective departments.

HR Interview:
After the technical round, I had my HR interview. The questions were mainly about:

- My family background
- Whether I was comfortable travelling from my hometown to different locations
- Whether I had plans for higher studies in the future

The HR interview was friendly and conversational, which made me feel comfortable.
Finally, on 28th Feb, they announced the result, and I got selected for a 2-month internship.

Internship Experience:

Location: Hosur
Duration: 2months (14th July-12th September)
Department: Quality assurance department

During my 2-month internship journey, I was deployed in the electrical lab (IC engine) of the QAD department. During this, I visited various labs and the vehicle testing plant to gain practical exposure to electrical system testing procedures. My project title was "Vehicle level testing automation", So as a part of it

- I proposed a unified vehicle-level testing rig concept to integrate multiple instruments into a single microcontroller-based system with a PC-based GUI. (just an idea)
- I designed and implemented a PicoScope-based automation system, enabling full automation of signal measurement and analysis of various vehicle-level testing. (Completed as a project)

The conversion from internship to a full-time role (PPO) was purely based on performance during the internship.

Based on my experience, I would suggest:

- Maintain regular attendance and punctuality.
- Show interest in learning new things and take initiative.
- complete the work assigned by manager on time
- Be bold, open, and have good communication with all instead of being silent so that you can learn more.
- Overall good performance, professionalism, and a positive attitude can increase your chances of getting a PPO.

I am glad to say that I received a pre-placement offer (PPO) from TVS Motor Company based on my internship performance.

Wishing you all the very best for your journey ahead — believe in yourself and keep moving forward.

"Dream big, prepare well, and never stop trying."

GOKUL M

EMR TAP CHANGER

CHENNAI

gokulmohanrajgkl@gmail.com 8248817032

ROUND 1 - Technical Interview (Telephonic)

The first round was a technical interview conducted through a telephonic call. The interviewer began with a brief self-introduction, followed by questions based on Electrical Machines, Power Systems, and project.

- Real power and Reactive power
- How the transformer working
- Losses in transformer
- How to reduce losses in transformer
- Which material is used for laminations in transformer and why?
- Transmission overview
- Why 11kV, 33kV, 66kV
- How the reactive power is controlled, and why should it to be controlled?
- Induction motor working and types
- TRIAC working and differentiate from SCR
- And Project related real time questions

➢ Overall Difficulty: Easy to Moderate
➢ Focus Area: Fundamentals + practical understanding

ROUND 2 - Technical + HR Interview (Video Call)

The second round was conducted through a video call and included both Technical and HR questions. The interview focused mainly on project work, transformer design, and power system fundamentals.

- Why we choose high current Transformer for our project?
- Explain the transformer specifications (Input/Output voltage and current).
- From my answer he asked to redesign the transformer rating, like
  - For the Same output current, what is the cross-sectional area of copper instead of aluminum
  - For double the output current, what is the cross-sectional area of aluminum conductor

- What is current density, Aluminum and copper current density, and how to prove it is correct
- Current density in Air cooling and oil cooling transformer
- Why current density is important
- Why insulation required in transformer.

• What is the circuit configuration in home, and why it is used?
• Why parallel circuit is used? In series connection what will happen
• What is Efficiency in parallel and series connection
• In two circuits bulbs are connected with one circuit in series, another one is parallel, what about the voltage, current, power, and efficiency.

Final Outcome

The results were announced on the next day.

All the best for your career!!!

HARINI N

MPHASIS LIMITED

CHENNAI

harinivaibhav13@gmail.com 9597804433

ROUND 1 - Online Assessment

The selection process started with an online examination held on campus. It comprised sections on aptitude and coding.
The aptitude part covered quantitative aptitude, logical reasoning, and verbal ability questions.
The difficulty level was moderate, but effective time management played a crucial role.
The coding section had two simple problems, mostly based on arrays or strings. Candidates were expected to solve at least one of them.
Preparation Tip: Having a solid understanding of aptitude fundamentals, along with regular practice with basic coding problems, can help you perform well in this round.

Pre-Placement Talk (PPT)
Shortlisted candidates were invited to the Pre-Placement Talk. In this session, company representatives discussed the organization's work culture, job roles, training approach, and the 'MetaGeek' program. It gave valuable clarity about what to expect in the upcoming rounds.

ROUND 2 - Technical Interview

The technical interview was conducted face-to-face and lasted around 25–30 minutes. The discussion mainly revolved around:
Resume walkthrough:
The interviewer went through every section of the resume in detail. This included academic background, skills, certifications, internships (if any), and achievements. Candidates were expected to clearly explain whatever they had written, justify their choices, and describe their overall profile in a confident and structured manner.

Detailed discussion of academic and personal projects:

Each project mentioned in the resume was discussed thoroughly. This included explaining the project idea, objective, and how it works. Candidates were also asked about their individual contributions, challenges faced during development, and how those challenges were resolved. Even small details like features, workflow, and outcome of the project were important.

Questions on the technologies used and the approach taken for problem-solving:

Interviewers asked about the programming languages, tools, frameworks, or technologies used in the projects. Candidates needed to explain why they chose those technologies and how they were applied. In addition, they were asked to describe their problem-solving approach, how they identified issues, broke them down, and implemented solutions step by step.

Key Suggestion: It is important to be thoroughly prepared to explain every detail mentioned in the resume confidently and clearly.

ROUND 3 - HR Interview

The HR round was short and conversational in nature. The interviewer mainly evaluated communication skills, attitude, and adaptability. Frequently asked questions included:

- Self-introduction
- Simple explanation of projects
- Willingness to relocate
- Interest in learning new technologies

Outcome

The results were declared after a few days, and I was successfully selected for the role.

Overall, the recruitment process was smooth and well-organized. Staying confident, answering honestly, and having a strong grasp of fundamentals are key factors for success.

The future belongs to those who prepare for it today.

JANANI K S

jananiks2005@gmail.com 7010067922

When I look back at my college years, I realize my journey was very different from most people around me. While others were actively involved in events, building connections, and chasing achievements, I found myself walking a much different path.

I have a strong interest in drawing and art, and I have secured state-level prizes twice. Engaging in art has helped me develop key skills such as focus, creativity, patience, attention to detail, and discipline.

During this phase of my life, I explored various concepts and developed an interest in core electrical subjects like electrical machines and power systems. I worked on a few projects along the way.

This phase helped me gain clarity about what I genuinely want to pursue moving forward. Now, as I step out of this phase, I carry with me a better understanding of who I am and the freedom to choose a path that truly feels right for me.

My college journey has helped me develop essential life skills like decision-making, time management, independence and self-awareness.

It takes courage to walk away from what doesn't ignite you, and even more to follow what truly does.

JANATH J

Higher studies

janath2905@gmail.com

When I first stepped into college in 2022, I just knew that these four years were important—but I really did not know how they would shape me.
For me, college life was not limited only to classrooms but went beyond that.
The first year was all about adapting to an unfamiliar place—a new environment, new faces. Everything was new. During this phase, sports kept me grounded.
Whether it was volleyball, cricket, shot put, or discus throw, the arena became a place where I gained confidence and mental strength. With strong analytical thinking and an innate problem-solving ability, I was able to approach problems with vivid logic, without any hesitation. This confidence made my decision-making skills bold and authentic.
This is where I entered a new era of leadership, where I took up the responsibility of Joint Secretary in the academic year 2024 and served as the Secretary of the EEE Association from 2025 to 2026.
This phase taught me lessons that no textbook can teach, and no pedagogy includes this chapter of life's syllabus.
I gained more confidence by learning how to handle pressure, accept downfalls, and come back with an energetic spirit.
These experiences shaped my mindset. I began to understand myself better.
The era of leadership refined my decision-making skills as I delved into coordinating events and ensuring their smooth functioning and grand success. There were challenges and deadlines that further strengthened my thinking ability and my approach to handling situations.
What truly marked this phase was my perception of management.
Management is not only about leadership but also about teamwork, strong decision-making, accountability, and most importantly, trust.
As I move forward, I aspire to pursue an MBA and explore new paths in my life journey.
These four years shaped me into a strong person, laid a solid foundation, and taught me that growth begins when comfort ends!
These four years showed me what I am truly capable of!
From hesitation to clarity....The journey changed everything!

JIJENDRA KUMAR R

HITACHI ENERGY

Chennai

rjijendrakumar@gmail.com

+91-6369221125

ROUND 1

- It consists of 60 MCQs to be completed within an hour.
- The questions covered core electrical engineering subjects like Electrical machines, Transmission and distribution, Power systems and some basic electrical concepts.
- This test consists of only technical questions, no aptitude questions.
- This test is designed in a way to test our understanding in the mentioned areas in both theoretical and analytical way.
- The key to succeed in this round was having a strong understanding of core electrical concepts.

ROUND 2

The interview began with a self introduction of the interviewers and myself. As I mentioned an internship in substation, they have started the interview with a question related to substation like

➢ What is mean by substation and why we need substation?
➢ What are major components in substation?
➢ In a substation, where we will place the surge arrestor?
➢ Why do we use circuit breakers instead of normal switches?
➢ What is the difference between the circuit breaker and disconnector?
➢ Why is SF6 used in high voltage circuit breakers?
➢ What is the difference between AIS and GIS?
➢ What is the purpose of CT and PT?
➢ Why the secondary CT should not be open circuited?
➢ What is mean by step and touch potential?
➢ What is the function of load dispatch centres?
➢ What Is the function of SCADA in substation?
➢ Why we use DC supply for controlling mechanism in Substation instead of AC?

After completing the questions related to the substation, then they have asked from basic concepts like,

➢ What are the types of motors in AC and in DC?
➢ Explain about the working principle of the induction motor.
➢ Why synchronous motors are not self starting?
➢ Draw the star and delta connections with simple resistors.
➢ Write the formulas for converting star to delta and delta to star.
➢ Write the formulas for single phase power and three phase power.
➢ Why we use √3 in three phase power but not in single phase power.

Apart from technical part, we had a small discussion about my family background, my native place, Father's occupation. At last they asked any questions from my side. I asked questions like

➢ What is expected from me if I got selected?
➢ Hitachi energy is dominating the globe but why not in India (in power sectors).

This round lasts around 30-40 minutes. Within 10 mins after the completion of interview, I was called for the HR interview.

ROUND 3

This round lasts just for only 10 mins. Similar to the previous round , this round also started with a self introduction but in short way.

➢ It includes normal HR questions which we could find in online platforms like,
➢ Why you want join HITACHI?
➢ Why you are not preferring higher studies, eventhough you are having good CGPA?
➢ Where do you see yourself in next 5 years? At last they asked, whether you have any questions?

I asked some questions related to the company.
Then the interview concluded with a nice handshake and a smile.

Results: The final results were announced on November 6, 2025, and I was selected for the role of Intern for a period of 6 months, with a potential full-time role (Management Trainee) based on the performance.

"It's fine to celebrate success, but it is more important to heed the lessons of failure."

KAMALESH S

kamalsanmugan2004@gmail.com 6369140021

As everyone started to pursue the degree in engineering, it is the time when I started to explore my life beyond it. I initially had the motive of getting placed in a good company with higher package, but when time passes I came to know that my field of interest is different from the degree I pursue. Even though my interest differs I am very much happy to be in this college particularly in this department. Initially started focusing only on academics, then after at end of my 1st year I wanted to have a different perspective on society, people, social issues, challenges pertaining for development which was beyond engineering. It doesn't mean that I totally ignored engineering & academics, I used engineering as a platform for exploring my views & ideas particularly all my tutors and faculties helped me developing & shaping my ideas. Their support for my future perspective was also remarkable and am always grateful for it.

Once when I was strong enough in my ideas & views, I started my preparation on various exams conducted by government through which I can directly interact with the society and do the needful & fulfill the requirements. Hence started preparing on own by exploring exams which has direct connection with the nation. Therefore I focused on Combined Defence Services (CDS) examination & Civil Services Examination (CSE) which is conducted by Union Public Service Commission(UPSC). These many years in which I have learned a lot many lessons transformed me being good & healthy individual. The atmosphere of college & classroom and my friends was a supporting factor for my carrier where there was a lot of lessons and teachings I came through.

For my juniors those who have interest beyond engineering particularly in any government services as I mentioned earlier, please do have balanced preparation focusing on both academics having a decent CGPA and anyother competitive exams. Being prepared mentally for these kind of services is different from the knowledge part. Hence mental strength supported with physical strength having a consistent & displined preparation with clear idea of what your doing which could be the key for success. As per the vision of Ex-President sir Dr.A.P.J.Abdul Kalam for a developed India with inclusive growth, we all shall take part in this process by being a vigilant citizen.

ALL THE BEST TO FUTURE ASPIRANTS!

ROUND 1

Online aptitude test

Nothing special. Solve all the repeated pattern questions continuously each day a month. A month will be more than enough. You will definitely crack it.

ROUND 2

Group Discussion

Note: Not every GD will go as planned. It may change due to the panel's expectations and time constraints. Always be ready to speak up for yourself.

Topic: Role of social media Influencers on the youth life.

All of those in our panel started talking about social media rather than really about social media influencers. One of the candidates on the panel pointed it out. I didn't panic, I apologised politely and continued with the right topic.

ROUND 3

level 1- Interview

The panel didn't ask me any questions in this round, likely due to my GD performance and effective communication. They just moved me to level 2 of the interview. Sometimes, peace of mind during an interview process does matter. Since I handled my GD scenario well , I cleared L-1 without almost any questions.

ROUND 4

The panel consisted of 2 interviewers.
The questions were as follows:

1.Introduce yourself.
(Tip: Don't over dump your entire history. Be short and be clear of certain points that might create interest to the interviewer).
I explained in the order
- education
- projects
- hobbies

That's it!!
2. Explain your project:
I explained two important projects. One is of IT domain and other is of Electrical core. I was open to further questions on that.

I was moved to level 3 without any further questions.

ROUND 5

The HR simply came and asked me to explain one single project. I chose my core electrical project to explain out of guys(I recommend you to explain your IT project). He asked me only one further question. "You seem to be technically sound in electrical. How will you perform in this domain".
I said , if I can do such a project with the experience of 3 years, I could do even bigger projects in given domain with the help of good guidance.

The call ended.

I did a whole lot of things in my college journey. That doesn't mean I did whatever came into my way. Right from Aindhinai TamilMandram to NCC, Team Aurora to an internship in Vikatan, I had multiple lives with a purpose to each. I danced during Samartha, MOC'ed for Sudeva. I won a few project competitions. I learned a lot of technical stuff in the garage of the rover rather than in the classroom. I learned to be kind and strong from NCC and my seniors rather than from those hour-long TED talks. My small wins were beautiful because of some big, ugly failures. And most importantly.. *people are kind*. Be it friends, seniors or juniors... Be Grateful.
But in the end of the day, it is you and your heart. Be kind enough to let go of your own mistakes. Be brave enough to face a hard day. Love yourself.

இதுவும் கடந்து போகும்...

LAKSHMA NARAYANAN J B

YANTRA VISION
BANGALORE

lakshmanarayanan886@gmail.com 9952356449

I had four rounds in total, and all of them were conducted online for me.
Round1-online test
Round2-Tech interview
Round3-Tech interview
Round4-HR interview

ROUND 1

There were 40 questions to answer in 45 minutes.
The questions were from Aptitude,c programming snippets , AI/ML Mcqs
Preparation tips:
– Use Karthick sir's notes for C.
– For aptitude, refer to feelfreetolearn and practice on Indiabix.
–For Aiml MCQ learn about the basics of image prcessing and algorithms used in it.

ROUND 2

This round was an online technical interview scheduled for 20 minutes, but it extended because most of the time was spent discussing my projects. I introduced myself, explained my projects in detail, answered basic OOPS questions with examples, and then solved two coding problems

- Fibonacci series
- palindrome check of string

in the Figma tool. After that, I solved the Two-Sum problem in an online compiler. I was then asked to choose a topic among Arduino software architecture, Ethernet switch, and LLM, and I chose Arduino SW architecture, explaining how the code compilation and internal software process work.
By the end of the round, I was placed on the waitlist for the next interview.

ROUND 3

I faced one online interviewer and one offline interviewer. After a quick self-introduction, they directly moved into questions related to machine learning and my project work. Most questions were based on my experience with YOLO, such as its structure, how it differs from other models, why we convert RGB images to grayscale, and general concepts like OpenCV, underfitting, overfitting, precision curve, abstraction in OOP, and what a binary matrix of an image means. Then I was asked to compile six programs on an online compiler:

- finding the length of a string
- Two Sum
- performing binary search
- finding the image matrix of an image
- finding the maximum pixel value
- finding the sum of the diagonals of an image.

I solved five out of six, and for the remaining one, I explained my approach. Finally, they asked me if I had any questions, and I asked about their current project, their scaling process, and their journey in the company. We had a 20-minute discussion where it felt like we were collaborating on a real project, which I believe created a strong impression. At the end of the day, I wasn't immediately called for the HR round, and they informed me that they would contact me the next day if I was shortlisted.

ROUND 4

Some were called for the HR interview throughout the afternoon, but I didn't receive any meeting link or call, so I assumed the results were still being decided and was attending another company Drive. Finally, by the end of the day, I received the confirmation call informing me that I had been selected without HR round!..

Preparation Tips

If You see this before/during placements

- Select a Field(Electrical/Electronics/Software) and start your preparation with your current Resume and Job Requirements. Update it daily, definitely u can crack ...
- Even if u choose other than software ..practise 3 leetcode problems daily ...
- Make sure you are strong in your Fundamental concepts, Apti& Programming

Best Wishes to whoever is reading it ....

"Make your inner self Satisfied - nothing is more than that...."

LEVIN RICARDO P

HITACHI ENERGY

CHENNAI

levinricardo04@gmail.com

9080942712

ROUND 1 - Online Assessment

The online assessment was conducted on the HirePro platform. The test consisted of 60 questions to be completed in 60 minutes, and the overall difficulty level was moderate. The questions were mainly from core electrical subjects such as:

- Power Systems
- Electrical Machines
- Transmission and Distribution
- Protection and Switchgear

ROUND 2 - Technical Interview

The technical interview was conducted at Amrita Vishwa Vidyapeetham as part of a pool placement drive where around 200 students appeared for the interview. Each interview lasted for about 30–40 minutes. Each panel consisted of two interviewers who were managers with more than 15 years of experience. They were very friendly and made the interview environment comfortable for the candidates.

The interview started with a detailed self-introduction where they asked about my background, internship experience, and projects. Most of the questions were from core subjects like Power Systems and Protection & Switchgear. Some of the questions asked were:

- Draw and explain the structure of the power system arrangement.
- What is the average power factor recorded in homes?
- Are household loads capacitive or inductive?
- Explain different protection methods used in power systems.
- Explain different bus bar arrangements in substations.
- Questions related to my projects, especially detailed questions from my ETAP project.

Most of the questions were follow-up questions based on my previous answers, so it is important to answer carefully and explain your concepts clearly. The interviewers mainly focused on understanding the depth of knowledge in core subjects. If you are not sure about an answer, it is better to honestly say that you are not sure instead of guessing.

HR Interview:

Compared to the technical interview, the HR round was more challenging for me as it focused on communication, decision-making, and management skills. Since I had highlighted my leadership experience in college, the interviewer concentrated more on my roles and activities beyond technical work. The interview began with a completely non-technical self-introduction, not based on my resume, followed by questions about my position in the EEE Association and the events I had organized.

One of the interesting questions was about something unique I had done during a college event. I explained that during the IAC event, we invited speakers to discuss the applications of Artificial Intelligence in electrical engineering. When asked if we were trying to shift focus away from core electrical jobs, I clarified that our intention was to show students—who are increasingly inclined toward software—that AI can also be applied within core electrical domains. He also asked how I measured the success of the event, and I responded that students actively interacted with the speakers during and even after the session, showing genuine interest and engagement.

In a situational question, I was asked to choose between five departments—sales, marketing, engineering, production, and service. I chose engineering, explaining my interest in solving technical problems and working on engineering solutions. He followed up by asking why not sales or marketing, which led to a deeper discussion on decision-making and role responsibilities. The interview ended positively with a handshake and the remark, “Hope to see you in the company if everything goes well.” This experience made me realize the importance of communication, presence of mind, and handling unexpected questions effectively.

Result:

After completing the HR interview, I was informed that I had been placed in Valeo and was asked to accept the offer. They also said that accepting it would prevent me from continuing with the HR process for Hitachi Energy. Since I had already completed Hitachi’s HR round, I chose to wait for the results.

Later, the placement team made it clear that I couldn’t hold the Valeo offer while waiting—I had to either accept or reject it. After thinking carefully, I decided to reject the offer and continue with other opportunities.

Finally, on November 6th, Hitachi Energy results were announced. This experience taught me that “*delays are part of the journey, but things eventually fall into place—so stay focused, keep giving your best, and remain confident*”.

Wishing you all the very best for your placements!

LIYASNI U S

VA TECH WABAG

CHENNAI

usliyasni@gmail.com

8248964360

WABAG

sustainable solutions. for a better life.

ROUND 1 - Aptitude Test

This was an online test consisting of five sections, each with a strict time limit:

- Quantitative Aptitude
- Logical Aptitude (pattern recognition)
- English Vocabulary
- Data Comprehension
- Identifying the exact matching sequence from four options

The questions were mostly easy and fundamental, but the real challenge lay in time management. The data comprehension section was particularly demanding, as it required quick analysis and rapid decision-making within a very limited time. Overall, this round effectively tested speed, accuracy, and composure under pressure.

ROUND 2 - Group Discussion

Approximately **120 candidates** were shortlisted for the Group Discussion round. We were divided into **12 panels**, with **10 members in each panel**.

A major advantage of this round was that we were allowed to **choose our own discussion topic**. Our group selected:

“Is Artificial Intelligence a Boon or a Curse?”

Key takeaways from this round:

- Be proactive and seize opportunities to speak.
- Try to contribute **at least three times**, ensuring each point is unique and relevant.
- Maintain confidence, but avoid being aggressive or dismissive when disagreeing.
- Strong persuasion skills matter, and attempting to **summarize or conclude the discussion** leaves a positive impression.

This round primarily assessed communication skills, clarity of thought, teamwork, and leadership qualities.

ROUND 3 - Technical + HR Interview

From the 120 candidates, **28 members** were shortlisted for the interview round. The interview panel consisted of **one HR representative and one technical expert**, and both assessed the candidate simultaneously.

HR Questions:

The interview began with general personal questions such as:

- Family background
- Why I chose Electrical and Electronics Engineering (EEE), despite being a NEET aspirant, How did you handle this change of decision.
- Willingness to relocate, including opportunities abroad

Technical Questions:

The technical questions were basic and primarily focused on **Power Systems and Electrical Machines**. Some of the questions included:

- Drawing a **single-line diagram**
- Materials used for **busbars**
- Structural differences between **indoor and outdoor cables**
- Types of **motor starters**, with emphasis on the **DOL (Direct-On-Line) starter**

The interview lasted around **20–25 minutes**. Throughout the process, the HR panel closely observed body language, tone, and stress-handling ability. The difficulty level of questions was gradually increased to assess composure under pressure.

A key lesson from this round is that if you do not know an answer, it is better to admit it politely and attempt to recall related concepts rather than panic or waste time. Staying calm and composed is crucial. At the end of the interview, the panel asked if I had any questions for them. It is highly recommended to ask a few thoughtful questions, as it reflects genuine interest in the organization and role.

Final Outcome

The results were announced **on the same day**, and the **offer letter was issued immediately** to the selected candidates.

Final Advice

To anyone preparing for the VA Tech Wabag interview:

- Be technically prepared with strong fundamentals.
- Practice time management, especially for aptitude tests.
- Communicate clearly and confidently.
- Stay calm under pressure and demonstrate professionalism.

Good luck to all future aspirants!

MADHIVADHANI K

HITACHI ENERGY

CHENNAI

madhivadhani199@gmail.com

9952771931

ROUND 1-MCQ

Date: 24th September 2025

This round was conducted on HirePro Platform. It consisted of 60 MCQs with a 60 minutes duration, which was adequate as the questions were easy and being thorough in basics is enough. All questions were technical, no Aptitude. Some were numerical, around 3 questions were fact-based such as the Edison cell voltage (1.2 to 1.4) V.

Major Focus: Power system, Protection & Switchgear, Transmission and distribution, PSA (numerical), Electrical Machines (lab experiments, applications).

ROUND 2-Technical Interview

Date: 17th October 2025

Most candidates who were selected for Hitachi energy Interview were also shortlisted for Titan Group discussion round. Both were conducted offline on the same day, but at different locations. Hitachi energy had only 2 more rounds, whereas Titan had 4 rounds. We were in a situation to choose one. Choose wisely by understanding the company and select the one that aligns with your interest. Such situations are rare.

This round was conducted at Amrita Vishwa Vidyapeetham for Coimbatore zone, which included students from (Amrita Groups, Sri Eshwar, PSG (Tech + iTech)). Each interview panel consisted of two experienced interviewers with strong technical knowledge in the domain they wanted to recruit. The interview lasted around 30–40 minutes. The interviewers began by introducing themselves and ensured I was comfortable before starting. I was asked to give a self-introduction, and it is good to mention why you are interested in joining the company at the end of the introduction.

Below are the questions they asked

- Draw transformer equivalent circuit and write related equations. Additionally, they told me to explain the technical terms involved in it.
- What is relay? Where does it get its input from?
- Why do we need instrument transformers?
- How did I learn Protection & Switchgear, and what materials did i use?
- What is circuit breaker and tell their types.
- Difference between circuit breaker and isolator.
- Draw power triangle. Write the power equations. What are active and reactive power. Is reactive power good or bad, justify.
- What is closed loop system and open loop system? Give example of closed loop system.
- Two wattmeter method. Speed control methods of Induction motor.
- What is converter and inverter and the difference between them, What is rectifier?
- Draw buck and boost converter.
- What is transfer function, What is efficiency, Difference between transfer function and efficiency.
- What is current density?

For me, they didn't ask questions related to project. At the end, they asked me if I had any questions, and I asked them two questions related to their sustainability goals and EconiQ product scope. After completing the technical round, they informed immediately whether we had to wait for the HR interview.

Tips:

- It would be better if questions we ask reflect our concern and responsibility for the company's product and goals.
- They wanted to test basic knowledge, learning ability, and clarity in the subjects learned. So, be thorough with the Basics.
- No one is ever fully prepared. There will always be unknowns, so don't doubt yourself. Speak confidently about what you know.

ROUND 3-HR Interview

Date: 17th October 2025
The HR panel also had 2 Interviewers. It lasted for about 10-15 minutes.

- They asked for self-introduction with something new that is not present in the resume.
- whether I had traveled beyond my place of residence without my parents.
- whether relocation to Chennai would be fine for me and my parents.
- My strength and weakness.
- whether I have interest or plans regarding higher studies.

The HR interview went really well, they were friendly. Even the same panel may conduct interviews differently, so do not expect only managerial or behavioral questions, as technical questions may also be asked.

Tips:

- Impress them in the introduction itself it may lead to smooth interview.
- Try to showcase what's unique in you that the company might need.
- While mentioning a weakness, also explain how you are actively working to overcome it, which shows self-awareness and a growth mindset.

RESULTS: Announced on 6th November 2025, That six students from PSG iTech were offered positions under the Student Intern Program at Hitachi Energy Technology Services Pvt. Ltd.

One thing I want to tell everyone is not to stress too much, it's not a big deal. Work hard, but don't exhaust yourself. You will achieve in the end, no matter what. Trust yourself.

Be the fire of your own. Don't burn yourself, be your warmth when the world turns cold.

MICHELLE ANN CEDRIC

TVS MOTOR

HOSUR

michellecedric135@gmail.com

8903611427

SELECTION PROCESS

The very first step in shortlisting candidates for TVS Motor company was based on academic performance (CGPA) and resume screening. I was among the shortlisted EEE students due to a good CGPA and relevant project experience in the automobile field. The company offered the Quality Engineer role to students in their 5th semester and the Proving Engineer (Electrical) role to students in their 6th semester. Since I was in my 5th Sem, I was offered Quality Engineer Role.

ROUND 1 - APTITUDE TEST

Date: 23/01/2025
Time: 7:00PM to 8:00PM
Duration: 60 Minutes
Venue: Any location
Mode: Online Mode

The first round consisted of basic aptitude questions and technical questions. The topics covered in the technical section were Power electronics, Linear Integrated Circuits, Microprocessor and Microcontroller, etc. There is no negative marking.

ROUND 2 - GAMIFIED ROUND

Date: 04/02/2025
Time: 7:00PM to 10:00PM
Duration: 90 Minutes
Venue: Any location
Mode: Online Mode
Platform: Nautics

Areas tested: Behaviour, Psychometry, Memory power

The goal is to get maximum number of questions right. The tasks were time bound. You will be challenged with various situations and must come up with solutions for it. A calm surrounding is necessary for this round. The gamified assessment helps boost the score.

ROUND 3 - PPT & INTERVIEW

Date: 25/02/2025
Duration: 40 Minutes
Venue: PSG iTech Placement Cell
Mode: Online Mode and Virtual mode

The day began with the Pre-Placement Talk (PPT), during which the company introduced itself, highlighted its achievements, explained its structure, and outlined the available roles along with career growth opportunities. Then came the interviews. The HR interview was conducted in person, while the technical interview was held in virtual mode.

HR Questions:
The interview started with the HR asking a few basic questions to make me feel comfortable.
- Willingness to relocate to Hosur, whether my parents are willing to send me there
- Whether I had plans to pursue higher studies.

Technical Questions:
The technical interview began with me explaining my projects. I had completed three main projects during my college, which I explained to the interviewer. However, the interviewer did not ask any questions related to my projects. The technical questions were basic and mainly focused on electric vehicles. The questions were not based on my areas of interest.
Some of the questions asked were:
- What are the advantages of EV?
- What are the disadvantages of EV?
- What are the different types of batteries used in EV?
- What is cell balancing?
- What are the types of cell balancing?

- What is regenerative braking?
- What are the types of charging mechanisms?
- Discuss some of the charging topologies.

Since it was a virtual interview, it was comparatively easy to crack. Be confident while answering the questions. You don't need to know the answers to all the questions. If you are unsure about any question, be honest instead of trying to manage or give a wrong answer. On the 28th of February the results were announced and I got selected for the 2-month internship!!!

INTERNSHIP

Duration: 12th July - 14th September
Location: Hosur
Department: Quality Assurance Department

During my internship, I was deployed in the software section of the Quality Assurance department. The tasks assigned to me by my manager included Benchmarking competitor vehicles, Performing Taguchi DOE on the incoming call feature of iQube, and analyzing the NPS of the connected features of the TVS app. Conversion to a full-time role was based on performance.

Some important points to note are:

- Complete the projects and tasks assigned by your manager sincerely.
- Interact with your colleagues, ask questions, and show interest in the work.
- Maintain full attendance and strictly adhere to the company's code of conduct.
- Be disciplined, as your character and attitude will help you stand out among the group of interns.

My successful internship performance earned me a Pre-Placement Offer (PPO) from TVS Motor Company!!!

I would like to share a message with my beloved juniors. Wishing you all the very best for your placements and future endeavours. Don't lose heart during the placement season. There will be moments where things feel difficult, but stay positive and trust the process. Always remember: Be strong and courageous - your faith will surely move mountains. What's Meant to be, will always find a Way. Feel free to reach out to me anytime if you need help or guidance of any sort.

BRING YOUR A-GAME GUYS ⚡!!!

MOHANABALAJI S V

VOLTAS LIMITED
COIMBATORE

svmohanabalaji@gmail.com

9150066793

ROUND 1 - Online Test

The first round was an online assessment with a total duration of 60 minutes. It consisted of 60 questions divided into four sections: Aptitude, Logical Reasoning, Verbal Ability, and Technical Core Concepts.
The aptitude and reasoning sections included basic problem-solving questions, while the verbal section tested grammar and comprehension. The technical section mainly focused on fundamental electrical engineering topics.
The overall difficulty level was moderate, and time management played a key role in clearing this round.

ROUND 2 – Technical + HR Interview

Round 2: Technical Interview
The technical interview mainly focused on core electrical subjects and fundamental understanding. The interviewer asked questions to check clarity of concepts rather than memorized answers.
The questions asked included:

- What is a power transformer?
- What is a distribution transformer?
- What is the purpose of star and delta connections?
- Write and explain the formula for power in AC systems.
- Explain Kirchhoff's Laws and their applications.
- Explain the process of electricity transmission from a generating station to households.
- What is the role of a diode in a rectifier? Draw and explain a half-wave rectifier circuit.
- What are the applications of MOSFET and IGBT?
- What are the speed control methods of an induction motor?
- How can the number of poles be changed to control the speed of an induction motor?

- How can the direction of rotation be changed in single-phase and three-phase motors?
- How does a star-delta starter reduce starting current?
- The interviewer expected clear explanations with proper reasoning. In some cases, follow-up questions were asked based on the answers given. The focus was on understanding the concept and the ability to explain it in a simple manner.

ROUND 3 – HR Interview

The HR interview was focused on personality, communication skills, and willingness to adapt to the company environment.
The questions asked included:

- Tell me about yourself.
- Where do you see yourself in the next 5 years?
- Are you willing to relocate if required?
- Are you aware of the job role you have applied for?
- Do you have any questions for us?

The HR round was more about confidence, clarity in communication, and honesty in responses rather than technical knowledge.

Keep pushing until you reach your goal.

MUGESH G

SWITCH

SWITCH MOBILITY Pvt Ltd

CHENNAI

gmugesh33@gmail.com

7904631748

ROUND 1 - Online Assessment

The first round was an online eliminatory test conducted for around 282 candidates, with a duration of 90 minutes. It was designed to test both aptitude and core technical knowledge within a limited time. The test mainly included:

Section 1: Aptitude & Technical MCQs

This section includes quantitative aptitude, logical reasoning, and core technical MCQs. Questions were mostly fundamental and analytical in nature.

Section 2: Core Technical Questions

The technical section covered subjects like Electrical Machines, Power Electronics, Circuit Theory, Control Systems, Embedded Systems, DSP, and basic Power Systems.

The questions themselves were not extremely tough, but they were application-based, which meant you had to think quickly rather than rely on memorization. The biggest challenge in this round was definitely time management, as every question needed quick understanding and fast decision-making.

Overall, this round was a good test of speed, accuracy, and how well you can apply your fundamentals under pressure.

ROUND 2 - Technical Interview

The technical interview was more focused on understanding how well I could apply my knowledge in practical scenarios. The panel was looking in how clearly, I could explain concepts with some practical use cases.

Most of the discussion was around core electrical and EV-related topics such as:

- Applications of PMSM and BLDC motors
- Field-Oriented Control (FOC)
- Inverter design and efficiency
- BMS including the SoC and SoH estimation methods
- Fault handling in power electronic converters
- Regenerative braking and thermal aspects

A major part of the interview was based on my projects. The panel asked in-depth questions about:

- SRM Driver Controller, focusing on control strategy and hardware challenges
- Autonomous Model Vehicle, including CNN, YOLO, sensor fusion, and RTOS concepts.
- Formula Bharat EV, covering system design, motor selection, and power architecture.

They were particularly interested in understanding what I had actually done, the challenges I faced, and how I approached solving them.

Key takeaways from this round:

- Be very clear with your basics
- Know your projects thoroughly
- Try to explain answers in a simple and structured way

This round mainly tested how well I could connect theory with real-world applications and explain it confidently.

ROUND 3 - HR & Managerial Interview

The final round focused on evaluating communication skills, mindset, leadership qualities, and overall professional attitude. The panel aimed to understand both technical orientation and personal approach toward challenges.

The interview included discussions around:

- Motivation for choosing a career in electric mobility
- Challenges and future scope of EV adoption
- Handling failures and learning from them
- Team collaboration and conflict management
- Managing responsibilities under pressure and deadlines

In addition to these, general questions related to background, adaptability, and willingness to relocate were also discussed.

This round was less about technical accuracy and more about clarity of thought, confidence, and behavioral approach. The panel carefully observed communication style, composure, and the ability to present ideas effectively.

Overall, this stage assessed personality, leadership potential, adaptability, and professional maturity.

“Opportunities don’t appear by chance - they align with preparation, clarity, consistency, and the composure to perform under pressure.”

NANTHA KUMAR S

CAPGEMINI

CHENNAI

nanthakumars400@gmail.com 8667251384

ROUND 1 - Online Assessment

The recruitment process began with an online assessment consisting of multiple structured sections designed to evaluate technical knowledge, communication skills, and problem-solving ability.

Section 1: Aptitude & Technical MCQs

Included quantitative aptitude, logical reasoning, and core technical MCQs. Questions were
mostly fundamental and analytical in nature.

Section 2: English Communication Assessment

Evaluated communication proficiency through:

- Spoken voice review
- Grammar and comprehension
- Pronunciation
- Speaking on a given topic

The focus was on clarity, vocabulary, and confidence.

Results for Sections 1 and 2 were displayed immediately, and shortlisted candidates proceeded to the next stage.

Section 3: Coding Test

Two coding problems (easy–medium level) were given.

Evaluation was based on test cases passed and code efficiency. Clearing most test cases
allowed progression.

Section 4: Gamified Assessment (AON)

Around five games assessing:

- Logical reasoning
- Puzzle solving
- Data interpretation
- Decision making

Timed and straightforward, focusing on speed and accuracy.

Section 5: Behavioral Assessment

Assessed workplace competencies such as:

- Attitude and work ethics
- Team collaboration
- Communication
- Problem-solving
- Leadership and pressure handling

ROUND 2 - Technical + HR Interview (Virtual)

This was a combined discussion evaluating technical understanding, project knowledge and overall role fit.

The interview began with a brief self-introduction, followed by a discussion on my project where I explained my role, challenges faced, and solutions implemented. A few questions were asked on the AI/ML concepts used in the project.

The panel also discussed my academic performance, where I explained the CGPA variation due to parallel involvement in intensive project work, highlighting the practical skills gained.

Behavioral and situational questions were asked to assess decision-making, teamwork, and adaptability. One scenario involved choosing between two identical job offers, where I explained my approach of evaluating domain alignment and long-term growth before making a decision.

The discussion concluded with questions on work preferences and relocation flexibility, followed by an opportunity to ask questions to the panel.

The process was structured and smooth, assessing both technical competence and cultural fit. The interview was interactive and provided a good platform to showcase skills, projects and problem-solving approach.

Preparation Tips

- Practice timed coding and code-snippet questions.
- Kartick Sir's notes are sufficient for technical fundamentals.
- Refer Glassdoor, Unstop, and GeeksforGeeks for question patterns.
- Choose your target domain early and align preparation accordingly.
- Solve 2–3 coding problems regularly to improve speed and logic.
- Stay strong in fundamentals, aptitude, and programming basics.
- Keep updating your resume and stay consistent

Feel free to reach out for any queries.

"Keep showing up—the right opportunity is waiting beyond your current dream.
முடிவல்ல, மாபெரும் தொடக்கம்!"

NARMADA K S

ERAM POWER ELECTRONICS

Bangalore

narmadaks2004@gmail.com

+917845069195

College Phase is one of the best phases of my life. A blend of learning, friendship, challenges, and discovery. When I first stepped into college, I was filled with curiosity and excitement, unsure of what the next few years would bring. Today, I look back and realize how much I have grown, not just academically, but as an individual. The early days were all about adapting to a new environment, new classrooms, new subjects, and new people. Over time, those unfamiliar faces turned into close friends, and together we navigated assignments, exams, and endless discussions. The late night study sessions, last minute submissions, and shared laughter became memories I will always cherish. As an Electrical and Electronics Engineering student, my academic journey has been both challenging and deeply rewarding. Among all the subjects, power electronics captured my interest the most.

I was called for the interview based on my resume submission. The interview process consisted of multiple interviews. In the first interview, I was interviewed by the Product Development Head, who asked basic questions related to power electronics, particularly on inverters and semiconductor devices, to assess my fundamental understanding. The second interview was conducted by the Vice President, where the discussion was focused on my academic projects, mainly focusing on filter design. I explained my projects in detail, including the concepts used and implementation. In the next interview, I was interviewed by the Project Manager, which was more HR-oriented, covering time management questions. After successfully completing all the interviews, I received my offer letter on the same day.

“ Believe in yourself and trust the process “

NATARAJAN K

Fisher Pumps Pvt.Ltd

COIMBATORE

natarajankillivalavan@gmail.com +91 93452 45951

MY PLACEMENT EXPERIENCE

Company: Fisher Pump Pvt Ltd
Role: Production and Service Engineer
Recruitment Type: Off-Campus

ROUND 1 - Technical Interview (Telephonic)

Duration: 15 Minutes

The first round was a telephonic technical interview. The interviewer asked me to introduce myself and then asked basic technical questions.

Topics Covered:

- Electrical Machines
- Basic Electrical Concepts
- Project-related questions

Questions Asked:

- What is a motor?
- Difference between AC and DC motor
- What is a transformer?
- Explain your project

My Experience:

The questions were simple. I answered confidently with basic knowledge.

ROUND 2 - Technical + HR Interview (In-Person)

Duration: 15–20 Minutes

The second round was a direct interview (face-to-face). It included both technical and HR questions.

Technical Questions:

- What is power factor?
- Difference between active and reactive power
- Basics of electrical systems
- Project explanation

HR Questions:

- Tell me about yourself
- Why do you want this job?
- Are you ready to work in production and service?

My Experience:

This round checked my knowledge and communication skills. I stayed calm and answered clearly.

Final Selection

After completing both rounds, I got selected as a Production and Service Engineer. .
From this experience, I learned:

- Basic concepts are very important
- Confidence is key
- Communication skills matter

NITHIN ABHISHEK R

Accenture

BANGALORE

nithinabhishekr@gmail.com

8072295048

Accenture visited our campus offering three different roles:

- Associate Software Engineer (ASE) - 4.5 LPA
- Advanced Associate Software Engineer (AASE) - 6.5 LPA
- Advanced Application Engineer - 11.1 LPA

The entire hiring process consisted of 6 rounds. The first three rounds happened in a single session, and each was an elimination round. You had to clear one to proceed immediately to the next. For this round staff from Accenture came for invigilation.

ROUND 1 - Cognitive & Gamified Assessment

This was the first hurdle. It was a gamified round designed to test logical thinking, problem-solving, and cognitive abilities through interactive games and puzzles.

ROUND 2 - Technical Assessment (MCQs)

After clearing the gamified round, the portal directly moved me to the Technical MCQ round. The questions mainly covered:

- C and C++ Fundamentals
- SQL and Database Management
- Pseudo-code reading and debugging
- Basic Networking and Cloud computing concepts
- General Software Engineering principles

Tip for Round 2: You don't need to write code here, but you must be very quick at tracing outputs from given pseudo-codes and have strong fundamentals in SQL queries.

ROUND 3 - Coding Assessment

This was the final round of the day. We were given 45 minutes to solve coding and frontend questions. The questions tested different domains:
1. Data Structures / Logic: A problem that required the use of Dictionary/Hash Mapping.
2. Web Development: A frontend question requiring HTML, CSS, and JavaScript.
3. Database: An SQL query writing question.
I was able to solve the Data Structure and Database question.
Result of Initial Phase: After clearing all these three elimination rounds on the same day, I received a confirmation email stating that I was shortlisted for the Communication rounds.

ROUND 4 - Verbal Communication Assessment (Online)

About two weeks after the coding round, I received the link for the Verbal Communication test. This is an automated AI-driven test that evaluates your spoken English. It included sections like:

- Reading sentences aloud
- Repeating sentences you hear
- Answering simple conversational questions
- Story retelling

ROUND 5 - Written Communication Assessment

This happened on the same day as the Verbal round. It was an email writing/essay writing test to check grammar, vocabulary, and structuring of thoughts. I got a confirmation mail on the same day that I had cleared it and to wait for the interview scheduling.

ROUND 6 - Technical + HR Interview (Virtual)

About a week later, I received an email to book my interview slot. We had to select from the available time slots for a single day, and I chose the 11:00 AM slot. The interview lasted for about 25-30 minutes. The interviewer was very friendly and made me feel
comfortable. Discussion topics:

- Self-Introduction: I gave a brief intro about my background and skills.
- Projects: We had a deep dive into my resume. He asked me to explain the architecture of my projects and the tech stack (Python, C/C++, Frontend) I used.

- HR Questions: Since I belong to the core EEE department, the main question was: "Why are you choosing IT when you are from a core EEE background?" * My Answer: I explained my deep passion for coding, my interest in software development, and the extra efforts I put into learning IT skills alongside my core subjects.
- Basic Skills Verification: A few technical questions to verify the skills listed on my resume.

Result: Around 2 to 3 weeks after the interview, the final results were announced, and I was selected for the **Advanced Associate Software Engineer (AASE)** role!

Takeaway / Tips for Juniors:
Be very strong with everything you put on your resume, especially your projects. For non-IT branch students (like EEE/ECE), be fully prepared to justify your transition into the IT sector with a genuine and passionate answer.

Trust the process and stay confident in your skills!

PRADEEP V

CATERPILLAR INC.

CHENNAI

pradeep292004@gmail.com 6379797165

Caterpillar Inc. is the world's leading manufacturer of construction and mining equipment, diesel/natural gas engines, industrial turbines, and locomotives, known for its distinctive yellow machinery used globally in building infrastructure, resources, and energy products.

Founded in 1925, the American company offers a broad portfolio of products and services, including financing through Cat Financial, supported by a vast independent dealer network and brands like Cat, Perkins, and Progress Rail, focusing on innovation, technology, and sustainability.

ROUND 1

The online test was conducted on 2nd August 2025 in SHL portal. The online test consisted of multiple sections each with separate timings.

1. Quantitative – 12 questions (12 mins)
   The questions were mostly easy covering all important topics.
2. Qualitative – 12 questions (12 mins)
   Directions, Coding-Decoding
3. Verbal – 12 questions (12 mins)
   Spot the error in the sentence, Alternate word type questions, basic grammar, Comprehension type questions – mostly easy and answerable.
4. Electronics/Semiconductor – 18 questions (20 mins)
   Digital and Analog electronics, LIC
5. Electrical – 18 questions (20 mins)
   Circuit Analysis, Machines, Power systems, Control systems, Microcontrollers & Microprocessors, Embedded Systems
6. Instrumentation – 25 questions (20 mins)
7. Computer Programming – 20 questions (MCQs) (20 mins)
   Sorting techniques, Time complexity, OOPs
8. C – 18 questions (20 mins)
9. C++ – 18 questions (20 mins)

The number of questions and timings for each Sections are approximate. The round 1 results were announced on 5th August 2025.

ROUND 2

Group discussion and the Technical Interview was conducted on 7th August 2025. The GDs were conducted role specific. However, the GD topics were common.

Each panel consisted of 7 members. We were asked to speak on 2 topics. Each GD lasted for about 5 minutes with a preparation time of 2 minutes each. The topics are listed below:

1. **Is India ready for autonomous driving?**

   I spoke one valid point with some stats included and also concluded the GD.

2. **Online education vs Physical education?**

   I managed to speak twice with valid points.

The GDs were completed by 11.00 AM and the shortlisted candidates were called for interview one by one.

Points to Remember:

- Know common GD etiquettes and ensure to follow them.
- Learn phrases meant for GD that can be used for specific scenarios.
- Don't be hasty to start the GD without valid points.
- Prepare points that are different for common GD topics.
- Follow recent trends in your domain and current affairs.
- Include some stats and example while you speak.

ROUND 3

I was called for the interview by 12.00PM. There were three panel members. The interview lasted for about 30-35 minutes.

I was asked to give a self-introduction and explain my family background, followed by technical questions related to my eBaja project and a few managerial questions.

The Questions are listed below:

1. Give a brief description about your project.
2. Can you draw the block diagram of your project?
3. Why did you choose the specific ratings for your battery?
4. What part of the project did you work on?
5. Did you work majorly on the controller part?
6. I was asked about the motor controller used.
7. What is the maximum current rating of your system?
8. What is the fuse rating used and how did you choose it?

9. What is the size and rating of the HV wire used?
10. What are all the other protection in your HV circuit?
11. What connector did you use for the battery connections?
12. How are the protective devices connected in the circuit (Focusing on terminals)?
13. Why is the battery rated 48V and not lower or higher?
14. I was asked the reasons for specific connection purposes in the circuit?
15. I was asked some question about the DC-DC Converter used.
16. What vehicle do you like?
17. How do you build a vehicle?
18. Why did you join EEE?
19. Do you have any plan for Higher studies?

There were few other questions focusing on the design aspects. The results were announced on the same day evening by 4.30 PM. Myself and one other person was awarded Intern + FTE offer.

Points to Remember:

- Do not panic or get nervous.
- Don't let fear consume you.
- Have a happy face.
- Instead of only answering the questions try to take it as a conversation which will ease the pressure, setting up a comfortable environment.
- Take your time to think instead of answering hastily.
- Make sure you give organized and structured answers.
- Observe whether the panel members understand your answers & act accordingly.

For CAT:

The interview panels are different for each division. Be strong with your projects. Also, they expect you to have some interdisciplinary knowledge apart from your own domain. More than theoretical knowledge, you will be tested for your passion towards your work, which is more important.

It isn't about being perfect; it's about being persistent!!

PRASIDHA P

CISCO

BANGALORE

prasidhapalanisamy@gmail.com 9884219434

ROUND 1 - ONLINE ASSESMENT

The first round was an online assessment held for 90 minutes, consisting of two sections. The first section had 42 MCQs covering topics like Programming, Operating Systems, Computer Networks, DBMS, SQL, and Data Structures & Algorithms. The second section included 3 coding questions of medium to hard difficulty, mainly based on Tree and Graph concepts. Results were announced on 1st July 2025, and I was fortunate to be shortlisted among the top 75 students across India.

ROUND 2 - HACKATHON

The next round was a two-day Hackathon at the Cisco Bangalore campus, where 75 shortlisted students from across India participated in teams of three. Each team was given problem statements with multiple topics to choose from, and our team worked on Quantum Networks, spending both days designing and presenting our solution. At the end of the event, winners were announced, but irrespective of results, all participants received an interview call as the next step in the process.

ROUND 3 - TECHNICAL INTERVIEW

It began with a brief self-introduction and discussion of my projects, followed by a live coding exercise on loops and doubly linked lists, where they expected naive, alternate, and optimized approaches along with their complexities. The panel then tested my knowledge of core CS fundamentals, covering Operating Systems Computer Networks, OOPs concepts with practical examples, and Data Structures & Algorithms through problem-solving questions. This round was highly detailed, assessing both coding ability and theoretical understanding.

ROUND 4 - MANAGERIAL INTERVIEW

The round lasted 50 minutes and focused mainly on project work. After a few technical questions from OS and CN, the discussion moved into a detailed exploration of my projects covering the problem statements, reasons for building them, tech stack choices, algorithms used, and creative ideas implemented. The interviewer further probed my motivation for pursuing software development despite being from the EEE department, aiming to understand my career direction and interest in the role.

ROUND 5 - EXECUTIVE INTERVIEW

This round focused mainly on my projects and their real-world applications. I explained my hackathon project in detail, including how our team developed the solution and my personal views on Quantum Networks. The discussion also covered my Caterpillar hackathon project, where I highlighted the approach and outcomes. The interviewer explored my interest in software development despite being from a non-CS background, asking about my motivation for the role. They also wanted to understand my preferred domain among Application, Network, and Embedded, and how my skills aligned with Cisco's expectations.

ROUND 6 - ETR ROUND

The final round was a friendly discussion with the recruiting head, covering the offer details, package, relocation, and my preferences for job location. It was smooth and informal, serving as the conclusion to the entire process. Across all rounds, interviewers encouraged asking thoughtful questions, and each stage involved filtering with results announced within 30–60 minutes. I was fortunate to clear all four rounds successfully.

On 17th September 2025, the final results were shared through the placement cell, fortunate enough that I was selected for Intern + FT Software Engineer role.

"Prepare well, put in your hard work, and most importantly trust the process."

RAGUL P

ragulp545@gmail.com

8778820812

Four years, and I'd like to start by saying I was always on time — it's just that my definition of on time evolved significantly over the course of this degree. Walking in mid-lecture with a completely straight face and a reason so random even I didn't fully believe it became less of a habit and more of an art form. The teachers noticed, I'm sure, and I'd like to thank them for their patience and selective memory.

In between those totally punctual class appearances, there was also the occasional rest of the eyes during lectures (the content was so engaging it was overwhelming), some light phone activity that was definitely academic in nature, and moments that were — let's say — best left undocumented. Oh, and I captained the cricket team, which proves I am fully capable of showing up and taking responsibility when I actually want to. Four years, questionable decisions, memories that'll outlast the degree, and somehow still here. No ragrets..

“AS LONG AS I LIVE THERE ARE INFINITE CHANCES”

RAGUL PRASATH V

vragulprasath4@gmail.com

7603943517

My journey began with a simple dream — to build a stable and respectable career through hard work. During my engineering studies, I developed a strong interest in the electrical field and realized that I wanted to serve as a government engineer. That dream led me towards preparing for the SSC JE examination.

Every day of preparation teaches me discipline, patience, and consistency. The path is not always easy, but each challenge motivates me to improve myself. I believe success is not achieved in a single day, but through continuous effort over time.

With determination and confidence, I am working towards turning my dream into reality and creating a proud future for myself.

“Success is the result of consistent effort and self-belief”

RANJANI A

TVS MOTORS

HOSUR

aranjani787@gmail.com 9487011303

TVS Motor Company is a reputed two and three-wheeler manufacturer company championing progress through sustainable mobility with four state of art manufacturing facilities in Hosur, Mysuru, Nalagarh in India and Karawang in Indonesia .It selects the campus talents through various internship program and Utkarsh Internship is one such program that comes to our campus. On the end of the selection, the students who have selected will be provided 2 months of internship program and based on the performance finally 6 months internship and guaranteed full time job offer will be provided to you. This company provides a great opportunity to the students who are really interested in automobiles sector

ROUND 1-Online MCQ Test

The test link was shared to out email and ensure if you are getting stable internet connection and ensure that your environment is calm. The online test contains.

- Technical questions
- Aptitude questions

Technical questions covers the basics of electrical machines, power systems, power electronics, DLC, circuit theory and aptitude covers the basics of verbal reasoning, finding missing elements, logical reasoning. There is no negative marking for this round and each sections has individual timer so try to complete as fast as possible to make sure every questions is answered.

ROUND 2-Gaming Round

Personally I love the gaming round because it is like testing our mind and decision making ability through game and it is really really interesting to attend this round. It mainly focuses on,

- Testing our memory
- Ability to solve a puzzle
- Decision making ability under various critical situations
- To check our honesty

Points to remember:

- Be honest with the answers
- Attend in Calm environment so that you can take decisions properly
- Don’t think too much in decision making questions answer what feels right to you

ROUND 3-Technical and HR Interview

Technical questions

1. Introduce yourself and your projects in the resume

Make sure you know about,

- What is your project?
- In which way it is new?
- Why did you select this project?
- What is the real life application of your project?
- What are the challenges you have faced while doing this project?
- If so, how did solve that problem?

And they start to ask about EV related questions,

2. Which motor is used in EV?
3. Do you know the rating of the motor used in EV?
4. What are the charging levels of EV?
5. What are the electric parts in IC engine vehicle?
6. What are the components in Electric vehicle?
7. What is BMS?
8. What is the function of BMS?
9. What is active and Passive cell balancing in cells?
10. Difference between Onboard and Offboard charging?
11. Do you know about the wiring harness of the vehicle?
12. What is State of Charge?
13. What is Depth of Discharge?
14. What is State of Health?
15. What do you know about the company?
16. What are the models of vehicle that has been released by TVS?
17. Do you have any questions?

- Use this opportunity wisely to show your interest to join the company and I asked about the future plans for EV in the company and by this I showed my interest in EV.

HR questions

1. Tell us about your family
2. You are okay to work in any job locations.
3. About my hobbies, I explained I like to play chess and badminton and HR said he also have the same hobbies and congratulates me on participating in sports. (Forms a connection between us).
4. Do you have any idea for higher education in future?

Internship Experience

During my Internship period, I was deployed in Super premium department of QAD where they will engage in New product development in collaboration with BMW.

My Project Title was,**"Testing BXXX vehicle cluster by writing test cases in CAPL in Vector Canoe"**

For that I have to learn about that BXXX vehicle functions and various different modes of vehicle. They gave SRS document to learn about this project. And side by side I also learned about various different kinds of signal in BXXX vehicle from DBC document. And I also I learned how different ECU's in the vehicle is integrating with each other. And with that understanding I started to write the test case conditions in English in order write in CAPL script easily. I wrote CAPL script for some functions by which I tested the functionalities of the cluster.

During the internship period I have to,

- Attend the morning meeting of our team where they will discuss about the progress of our work and what is the target work for today.
- I have to present a PPT on my progress to my manager.
- I have to go to other labs in QAD to understand what the activities they are doing.
- And finally I have to present the PPT on my work at the end of 2months

Based on performance and business requirement they will provide pre-placement offer. Finally I got the offer!!!

"Success is not the absence of failure; it's the persistence through failure"

"Fall seven times, stand up eight It's OK and It's Normal"

RATCHANA N

ratchanapsgitech@gmail.com 9500837212

I stepped into college in 2022 with ambition, but without a clear map of where I was heading. What followed was not just an academic journey, but a process of becoming—one that shaped both my thinking and my identity.

In the beginning, everything felt new and uncertain. But slowly, I learned to adapt, to observe, and to grow. I realized that learning is not limited to textbooks—it happens in experiences, in challenges, and in the moments where we question ourselves.

As I moved forward, I found my interest in core engineering. Understanding concepts turned into applying them, and applying them turned into building confidence. Through projects and practical learning, I began connecting theory with real-world problems, strengthening my analytical thinking and problem-solving ability.

At the same time, there was another side of me that kept growing quietly—the writer in me. Poetry became a space where I could reflect, express, and understand my journey. While engineering taught me logic and structure, writing gave me perspective and depth.

Balancing both taught me something valuable—that a person can be both technical and creative. One builds systems, the other builds meaning.

There were challenges, moments of doubt, and phases where progress felt slow. But those moments taught me consistency, patience, and the importance of continuing even when things are uncertain. Step by step, I became more confident in my abilities and clearer about my path.

Today, I aspire to build a career in core engineering, where I can apply my knowledge and continue learning. At the same time, I carry my identity as a writer—because both have shaped who I am.

These four years didn't just prepare me for a profession—they helped me discover myself.

RATHISH R

93618 56362

My journey through college has been simple yet meaningful. I focused on understanding concepts rather than just completing tasks.

I spent time building a strong base in my field and explored different topics that interested me. This helped me stay motivated.

Club involvement gave me opportunities to meet new people and learn from their experiences.

One advice I would give is: value the people around you—friends and peers can teach you lessons that books never can.

SAGHANAA T

RADIANT GLOBAL TECHNOLOGIES

CHENNAI

saghanaa05@gmail.com

8667219693

ROUND 1 - Online Assessment

Duration: 1 hour
Total Questions: 40
Total Marks: 70

This round tested a combination of aptitude, logical reasoning, and technical skills

Sections Covered:

SQL Queries (In-depth):

Questions focused oncomplex queries such as joins, nested queries, aggregate functions, and query optimization.

Aptitude (Logical Reasoning):

Topicsincluded:

- Blood Relations
- Seating Arrangements

C Programming:

Codesnippets were provided, andcandidates hadtodetermine the output

Domain Knowledge (Supply Chain Based Questions):

A fewquestions were related to supplychain fundamentals, testing basic understanding of processes and terminologies.

ROUND 2 - Technical Interview

Duration: 20–30 minutes

This round focused on SQL, Machine Learning and basic programming concepts.

- **SQL Concepts:**

1. what is Transaction?
2. What is Normalization?
3. Ask about ACID properties
4. Ask to write SQL queries

.

- **Machine Learning**
- What is kmeans?
- About outliers they have asked and how I identified in my project
- What is supervised and unsupervised learning algorithms?
- What learning algorithms I have used in my projects.

Mostly my interview was about my ML project and the interviewer also checked the clarity of concepts and step-by-step explanation rather than just the final answer

ROUND 3 - HR Interview

Duration: 15 minutes

The HR round was conversational and focused on understanding the candidate's personality and motivation.

Topics Discussed:

- Introduction and Academic Background
- Challenges faced during the project and how they were overcome
- Proud moment or biggest achievement
- Future goals and interest in joining Radiant Global Technology

The HRpanel was friendly and mainly assessed confidence, communication, and attitude.

All the rounds were conducted on the same day(August 26,2025). The results were announced on September 4. Strong command of SQL is crucial for both rounds. Attitude and the way you answer questions play a very important role.

ALL THE BEST!

SANJAY M S

mssanjay694@gmail.com

7794024340

My college journey has been driven by a constant desire to explore and chase my dreams, even when the path was not clearly defined. Instead of following a conventional route, I chose to focus on what truly excites and motivates me, taking small but meaningful steps toward my goals.

Throughout this journey, I faced uncertainties and challenges, but each experience helped me grow stronger and more determined. I spent time learning, experimenting, and improving myself, which gave me a better understanding of my passions and the direction I want to pursue.
One thing I strongly believe is that chasing dreams requires patience and courage.

TRUST YOUR JOURNEY !

SANJU SHREE V

CATERPILLAR INDIA

CHENNAI

sanjushreevenkat@gmail.com

6383082530

ROUND 1

The first round was an online assessment conducted on the SHL platform. It consisted of multiple sections including Quantitative Aptitude, Verbal Ability, Logical Reasoning, and core technical subjects.

- The aptitude and verbal sections were of moderate difficulty and covered basic concepts.
- The technical section included questions from core subjects like Electronics, Digital & Analog, Microcontrollers, and Programming (C/C++).
- Most questions were MCQs with a few coding-based questions.
- Time management was important as each section had limited duration.

ROUND 2

We were given two topics:
Is ChatGPT a boon or ban for education?
Fake news vs True news.
There was a short window to collect your thoughts before the discussion began.
The discussion mainly tested how clearly we could present our ideas, how well we listened to others, and whether we could bring balance into the conversation instead of being one sided.

.

ROUND 3

I was interviewed for the CAT Electronics division. The interview lasted around 25–30 minutes and was conducted by two panel members.
They started with my resume and asked questions from my core subjects like Microprocessors & Microcontrollers and Digital Electronics. I was also asked general conceptual questions such as RAM vs ROM, where they expected explanations in a practical, real-life way.

Since I had mentioned Embedded Systems as my area of interest, the discussion went deeper into topics like RTOS (hard vs soft), interrupt latency, and watchdog timer. From C programming, they asked about the full compilation process and also made me write code for swapping variables using different approaches.
A detailed explanation of one of my projects was asked. Drawing and explaining it step by step really helped in making things clear. Towards the end, they asked a few general questions like my higher studies plans, where I see myself in 5 years, and about my family background.
Overall, the interview focused more on understanding concepts clearly rather than memorized answers.

I received an internship offer for the CAT Electronics division.

Tips

- Focus on basics, especially C and core subjects
- Don’t give textbook definitions — explain with examples
- Be confident and clear while speaking
- Prepare your projects thoroughly and practice explaining them

SARVESSA JAGANATHAN

sarvesaajagan@yahoo.co.in

+91 63694 33133

I may not be the right person to give detailed guidance on campus placements, but one thing I've understood is the importance of clearly showcasing your skills during the interview. It's not just about what you know, but how effectively you present it and communicate your strengths.

I had the opportunity to work as an intern at an embedded systems design consultancy company in Bangalore for four months. This experience gave me valuable exposure to real-world applications and helped me understand how concepts are applied in practical scenarios.

The internship also improved my technical knowledge and confidence, as I got to work in a professional environment and learn from experienced people. It made me realize the importance of continuous learning and staying updated with industry requirements.

From my experience, clearing the first round is crucial, and for that, being strong in aptitude is very important. My advice would be to focus on building a solid foundation in aptitude and practice consistently, as it plays a key role in opening opportunities for further rounds.

SASTHIPPRANAV S C

HITACHI ENERGY

CHENNAI

sashtipranav12@gmail.com

9790090225

ROUND 1

The online test consisted of 60 questions to be completed in 60 minutes, with an easy to moderate difficulty level. The subjects covered included Protection and Switchgear, Power Systems Analysis, Electrical Machines, and Transmission and Distribution.

For preparation, the focus was mainly on core subjects, especially Protection and Switchgear, Power Systems, and Machines. Last-minute revision helped in quickly brushing up key concepts.

ROUND 2

The technical interview lasted around 30 minutes, and the panel members were experienced and conducted the interview in a structured manner. Initially, a structured self-introduction was requested and delivered accordingly.

Since Protection and Switchgear was mentioned as an area of interest, most questions were from that domain. The discussion included topics such as the Ferranti Effect and its causes, Types of protection like Differential Protection, the relationship between protection and fundamental laws, and basic concepts from power systems and transmission.They asked me to draw circuit of differential protectionThe questions were interconnected, where one answer led to another. Based on internship experience at TVS Sundaram Fasteners, additional questions were asked regarding how power is used in industry, types of protection systems used, and circuit breakers employed.

The interview highlighted the importance of deep conceptual understanding, and even when an answer was not known, the panel guided the discussion to help arrive at it. The overall difficulty level was moderate.

ROUND 3

The HR interview lasted around 10 minutes and focused on personality and self-awareness. Questions included a general introduction, strengths and weaknesses, and steps taken to overcome weaknesses.

The interaction was straightforward, and the evaluation was based on communication skills and clarity of thought.At the end of both interviews, a few questions were asked to the panel. This demonstrated interest in the company, helped in gaining insights from experienced professionals, and created a positive impression.

RESULT

After completing the HR interview, it was informed that an offer had already beensecured from Valeo, and a decision was required regarding it. It was also mentioned that accepting the offer would restrict further participation in other company processes.

Since all rounds for Hitachi Energy had been completed, the decision was made to wait for their results instead of immediately accepting the Valeo offer. However, the placement team
later clarified that the Valeo offer could not be kept on hold while waiting for other results, and a final decision had to be made.After careful consideration, the Valeo offer was declined to continue with other opportunities. The results were announced in the first week of November 2025, and a total of six students were selected for Hitachi Energy.

With the right effort and patience, good opportunities will come your way.

SELVADHARSHINI S

ASHOK LEYLAND

HOSUR

dharshiniselva19@gmail.com 9629861896

Round 1 : Online Test

The first round was an online assessment consisting of a total of 100 questions, to be completed within 60 minutes. The test included 50 aptitude questions and 50 technical questions.

- The aptitude section focused on quantitative ability, logical reasoning, and basic problem-solving skills.
- The technical section mainly covered core subjects such as Network Theory, Electrical Machines, along with some questions from Power Electronics and Electronic Devices.

This round tested both conceptual understanding and time management skills, as completing all questions within the given time was challenging.

Round 2 : Gamified Assessment

The second round was a gamified assessment, which included a series of interactive mind-based games. These games were designed to evaluate logical thinking, decision-making ability, focus, and problem-solving skills. Although the activities were engaging and fun, they were structured to analyze the candidate's cognitive abilities and behavioral patterns rather than technical knowledge.

Round 3 : Group Discussion

The third round was a group discussion conducted for 10 minutes on the topic "Future of Artificial Intelligence." I initiated the discussion and ensured a smooth flow by allowing others to share their views without interruption. I contributed three times, adding relevant points and maintaining a balanced and respectful conversation. This round evaluated communication skills, teamwork, and ability to present ideas clearly.

Round 4 : One-Minute Speech

The fourth round was a one-minute speech round, where each candidate was given different topics. Once the topic was provided, the timer started immediately, and we had to speak for one minute on it. This round focused on evaluating confidence, clarity of thought, and communication skills. It was a non-eliminatory round.

Round 5 : Techical + HR Interview

The final round was a face-to-face interview conducted by a panel of two technical members and one HR representative.
The technical questions focused mainly on electric vehicles, battery systems, and core electrical concepts. I was also asked to explain and design a 22.2 V lithium-ion battery pack and discuss the Battery Management System (BMS) used in our project.
Some of the questions asked were:

- Draw and explain a rectifier circuit and its applications
- Why lithium-ion batteries are used in EVs
- Design approach for a 22.2 V battery pack
- Functions of a Battery Management System (BMS)
- What is the C-rating of a battery
- What happens during overcharging and deep discharging
- Real-time applications of rectifiers
- Why BMS is necessary in lithium-ion batteries

The HR section included questions about my hobbies, family background, and career plans, with emphasis on my interest in working in the industry. This round evaluated both technical knowledge and overall personality.
Rounds 3 to 5 were conducted on the same day, making it a continuous and intensive process. At the end of the day, the results were announced, and I was selected.

I would like to share a message to my juniors: do not lose hope if you get rejected in any interview round. The selection process is not based only on hard work; it is also influenced by factors like the interviewer's expectations and perspective. In many cases, it is a combination of preparation and opportunity. So, keep improving your skills, stay confident, and continue attending interviews. You will definitely get selected in a company that suits you. Never lose belief in yourself.

"Never doubt your own potential"

SHRINITHI G

YIELD ENGINEERING SYSTEMS

COIMBATORE

shrinithigajendran92@gmail.com 7418296502

ROUND 1 - Online Test

The online test was conducted on 2nd December with a total duration of 2 hours.Each role had a separate question pattern and test structure based on the respective domain. This round consisted of two sections for the Electrical role.

Section 1 – MCQ Based:

This section contained around 30 multiple-choice questions that tested core electrical fundamentals.

Section 2 – Descriptive / Application-Based

This section contained approximately 15 questions, where candidates were required to explain concepts or draw ladder logic diagrams based on real-time applications. The questions were mainly from Circuit Theory, Power Systems, Protection and Switchgear, PLC Programming, Electrical Machines, Power Electronics, and Control Systems.

ROUND 2 - Group Discussion (GD)

From the online test, around 16 candidates were shortlisted for the GD round for the Electrical role. It was conducted on the same day as the online test, and it lasted for about 20 minutes.Each panel consisted of 8 candidates, and a total of 12 topics, both technical and non-technical, were given from which one topic had to be chosen.Our group selected the topic “Should colleges focus more on practical learning?”, and we were given 5 minutes to prepare.

Some of the important points to be taken care of while attending GD are,

- Confidence, listening skills, allowing others to speak, presenting 2 to 3 valid points, maintaining professional body language, and being expressive. Initiating the discussion during silence was also important.

I spoke around three points, and finally, all candidates were asked to conclude the discussion.

Round 3 : Technical Interview

The third round was the Technical Interview, which was conducted on the same day. From the GD round, 4 candidates were shortlisted for the Electrical role. The interview lasted for around 30 minutes, and there were three interviewers on the panel.
The interview started with a self-introduction. After that, the interviewers moved on to questions related to my project.
Then, questions were asked from my area of interest, which was Electrical Machines and Power Systems. The technical questions included:
1. Draw the single-phase and three-phase connections for the electrical loads in that room and explain the connections.
2. What is phase balancing and why is it important?
3. What is an overload relay (OLR)?
4. Explain the internal working of the sensors used in your project.
5. What is the difference between active and passive sensors? Name a few examples for each.
6. What is a thermocouple and how does it work?
7. Explain basic concepts of capacitance when connected in series and parallel.
8. What is the difference between open-loop and closed-loop control systems?
9. What are the major difficulties faced in power systems?
10.Which country should India look up to in order to improve and overcome these power system challenges?
Towards the end of the interview, I was also asked about my five-year career goal. The interviewers mainly focused on fundamental understanding, application-based thinking, and clarity of concepts.
This round was an elimination round, so it is important to attempt all questions, and explain answers using real-time examples wherever possible.

Round 4 : HR Interview

Two candidates were called for the HR round, held at the company office. It was a discussion-based interaction covering family background, role preference, and why I was interested in joining the company. Towards the end, I was asked if I had any questions — always prepare one, as it shows genuine interest and leaves a strong impression. Results were announced the same day, and out of the candidates who attended, I was glad to receive the offer for the Electrical Intern position — with the opportunity to convert to a full-time role based on performance.

Closed doors don't block your path — they redirect you to a better one.

SIVASARAVANAN S S

sivasaravanan247@gmail.com

8610862846

My college journey has been shaped by a strong passion for drawing and creativity. Art has always been a way for me to express my thoughts and see the world from a different perspective. It has taught me patience, attention to detail, and the ability to stay focused on something I truly enjoy.

At the same time, I have been someone who believes in chasing dreams, even when the path is uncertain. I spent time exploring my interests, improving my skills, and understanding what I want to pursue in the long run. This journey has helped me grow both creatively and personally.

While following my passion, I also learned the importance of staying connected with society and understanding the world around me. Interacting with people, being part of activities, and observing different perspectives helped me develop a balanced approach towards life.

“its a leap of faith, take the chance”

SNEHA V

SOBHA CONSTRUCTION

DUBAI

snehasivaganga7@gmail.com 8148875546

ROUND 1 - Online Test

The selection process began with a written examination that focused on both core technical subjects and quantitative aptitude.

Structure of the Written Test:

- Total Questions: 30

Core Subjects (15 questions) : Power Systems, Electrical Machines, Power Electronics

Aptitude (15 questions) : Quantitative reasoning and basic mathematical aptitude

- Duration: 30 minutes
- Negative Marking: Yes (accuracy is important)

ROUND 2 - Group Discussion (GD)

Since this was a pool campus drive, students from multiple colleges participated. Each GD panel typically consisted of 13 candidates, each representing a different institution.

Details of the GD Round:

- Topic: “Effect of AI and Automation on Jobs”
- Duration: 10 minutes
- Shortlisting: 4–5 candidates were selected from each GD panel

Strategy & Observations:

- Each participant gets very limited time due to the large group size and short discussion window.
- Try to speak at least twice, ensuring the points are relevant, structured, and meaningful.
- Often, panellists prefer candidates who take initiative and speak early—so try to contribute proactively.

After the GD, shortlisted candidates were asked to fill out a personal information sheet, which included details such as family background. Additionally, an essay writing task was given; I chose the topic “Digitalization in the Construction Sector.”

ROUND 3 - Technical Interview

The interview panel focused primarily on core electrical engineering concepts. Questions were fundamental yet required clear conceptual understanding.

Technical Questions Asked:

1. Explain the working principle and application of an induction motor.
2. What is slip in an induction motor? Why it is important?
3. What happens to system stability if transmission line reactance increases suddenly?
4. Why are synchronous motors not self-starting?
5. Compare AC and DC motors.
6. Explain Rotating Magnetic Field (RMF).
7. Why does a transformer have high efficiency?
8. Explain transformer ratings (why given in kVA).
9. Explain ELCB and RCCB and their differences.
10. Why is impedance relay used in transmission lines but not in distribution systems?
11. What is the Ferranti Effect? How can it be minimized? (Also prepare corona loss)
12. What is a busbar? Why is it used when transmission lines already exist?
13. Why does India follow a 50 Hz system while some countries follow 60 Hz?
14. Difference between a diode and an SCR.
15. Since I mentioned my inverter project, I was asked to draw the inverter circuit.

No additional project-related questions were asked.

Non-Technical Questions:

- Brief discussion on family background
- Willingness to relocate to Dubai
- Ability to handle work-related stress

Tips for This Round:

- Provide clear, confident, and technically sound explanations.
- Demonstrate enthusiasm for the role and genuine interest in the company.

Final Outcome:

Although the process was initially planned to have two additional rounds (HR and Managerial), these were cancelled for all candidates. After the technical interview, I was selected.

“Push yourself, because no one else is going to do it for you”

SUDHAN A

sudhanarumugam2005@gmail.com 9361155406

Reflecting on my college journey, I see it as a phase of self-discovery rather than just following a defined path. While many focused on placements and achievements, I chose to explore my interests and build knowledge at my own pace, which helped me gain clarity about my strengths and what I genuinely enjoy learning.

I focused on strengthening my core fundamentals and worked on projects that allowed me to apply concepts practically, making my learning more meaningful and building confidence in my abilities. Beyond academics, my involvement in club activities helped me interact with diverse people, develop new skills, and understand the importance of teamwork.

Equally memorable are the moments shared with friends, from whom I learned not just academically but also about life, perspectives, and handling challenges. Overall, these experiences have shaped me into a more confident and self-aware individual.

THARIKA S

YAMAHA MOTORS

CHENNAI

tharikasen4@gmail.com

8072413367

ROUND 1 - Online Assessment

Date: 08.12.2025
Venue: PSG Tech, MCA lab
Platform: Mercer Mettl
The first round was an online aptitude test with a total duration of 60 minutes, divided into different sections, each with a specific time limit. The assessment comprised Logical Reasoning, Numerical Ability, Psychometric, and Quantitative Ability questions.
The quantitative section mainly covered topics such as Profit and Loss, Time, Speed
and Distance, Problems on Trains, Simple and Compound Interest, and Ratios and Proportions.

ROUND 2 - Group Discussion(Offline)

Date: 11.12.2025
Venue: PSG Institute of Management
The second round was a Group Discussion (GD), in which 30 students were shortlisted
and divided into groups of 10 members each. The topic assigned to our group was “Is India ready for complete Electric Vehicles?”
I represented the opposing side, arguing that India is not yet fully ready for a complete transition to electric vehicles. During the discussion, I clearly presented four key points supporting my stance, followed by a well-structured conclusion. The total duration of the group discussion was 15 minutes, with 2 minutes allotted for preparation.
The results were announced immediately after the Group Discussion. Four members from each group were shortlisted for the subsequent interview round.

ROUND 3 - Technical + HR Interview(Offline)

The third round was a Technical and HR Interview, conducted by a panel of four members, comprising two technical interviewers and two HR representatives.
The interview began with a self-introduction, followed by questions about my family background and whether any of my relatives reside in Chennai. The panel then proceeded to the technical segment of the interview.
Since I had mentioned Embedded Systems as my area of interest, most of the technical questions were based on communication protocols and core embedded concepts. The key questions included:

- Which communication protocol is costlier and which is cheaper, with an explanation
- Difference between a microprocessor and a microcontroller
- What is an interrupt and how it is handled
- What is interrupt latency
- Project-based questions on how I integrated sensors with Raspberry Pi
- Whether I know how to ride a motor vehicle

The HR interview focused on my personality, leadership, and career perspective. The questions included:

- What do you understand by leadership?
- As a leader, what principles would you follow?
- How do you handle conflicts in a team?
- Whether I would leave the company to pursue higher studies
- Whether I would be comfortable with a 3-year service agreement
- Questions related to my hobbies and interests

At the end of the interview, I was given an opportunity to ask questions to the panel.
The final results were announced within an hour. A total of five students were selected,
including two from PSG Tech, one from PSG iTech, and two MBA students.

My best wishes to everyone who reads this

“As long as you don’t stop, you are still in the race.”

THARUN ADHITYA B

MODULUS HOUSING

Chennai

tharunadhityab@gmail.com

Linkedin

ROUND 1 Telephonic call

On 25th December 2025, I attended the first round of the interview, which was a technical screening focused on my core electrical knowledge. The interviewer asked questions related to relays, including their function, types, and application in protection systems. I explained how relays help in detecting faults and isolating the affected circuit. I was also asked about Miniature Circuit Breakers (MCB), where I described their working principle, types of tripping mechanisms (thermal and magnetic), and their role in protecting electrical circuits from overload and short circuits. Additionally, I discussed basic electrical protection concepts and the importance of safety in electrical systems. The interviewer also asked about my academic/project experience, where I clearly explained the objective, methodology, and my role in the project. Overall, the round mainly tested my fundamental understanding and practical knowledge of electrical engineering concepts, and I was able to answer the questions confidently.

ROUND 2 Report making

On 14th January 2026, I attended the second round of the interview, which was a practical and task-based assessment. In this round, I was assigned to prepare a detailed Bill of Materials (BOM) for a building project, ensuring accuracy and proper formatting as per industry standards. I was also required to create electrical circuit drawings using AutoCAD, demonstrating my ability to translate design concepts into technical drawings. Additionally, I compiled the complete report in Microsoft Word, presenting the BOM and design details in a structured and professional format. During the evaluation, the interviewer asked questions based on my report to assess my understanding, accuracy, and approach. I was able to justify my work and explain the methodology clearly, which helped me get shortlisted for the next round.

ROUND 3 HR round

On 21st January 2026, I attended the third round, which was an HR interview focused on assessing my personality, communication skills, and overall suitability for the company. The discussion included basic HR questions such as my strengths and weaknesses, family background, expected salary, and how I could contribute to the organization. I answered by highlighting my willingness to learn, adaptability, and commitment to contributing effectively to the company's projects. The round mainly evaluated my attitude, clarity of thought, and alignment with the company's expectations, and I was able to respond confidently and professionally.

Conclusion | Modulus Housing

Overall, the interview process highlighted the importance of working in coordination with civil teams, especially since the company operates in the prefab construction domain. As an electrical engineer, I understood that my contribution goes beyond only electrical design, and includes close collaboration with civil engineers to ensure proper integration of electrical systems within the building structure. I aim to approach the work in a systematic, step-by-step manner, focusing on accuracy, coordination, and continuous learning. By gradually understanding project requirements and aligning with multidisciplinary teams, I can contribute effectively to the company's projects while improving both technical and practical knowledge over time.

"The only way to do great work is to love what you do." - Steve Jobs

VARMA R

FANUC INDIA Pvt. Ltd

Bangalore

varmarav04@gmail.com

+91 8667808010

About The Company

FANUC India, a subsidiary of FANUC Corporation, Japan, is a leading company in industrial automation, known for its CNC systems, industrial robots, and factory automation (FA) solutions used across various industries. The FA department mainly focuses on advanced automation technologies such as servo drives, CNC controllers, to enhance precision and productivity. This opportunity was an off-campus 6-month internship, and full-time conversion based on performance.

ROUND 1 - Online Assessment

10th November 2025

The first round was conducted on the Mettl platform with strict proctoring. Around 70 questions had to be completed in 1 hr 30 min.

There were two parts: Technical MCQs and Aptitude. The technical section covered Circuit Analysis, Electrical Machines, and Power Electronics, focusing on core fundamentals and calculations. The aptitude section included topics like Time & Work, Profit & Loss, Probability, Coding-Decoding, and Syllogisms. Overall, the aptitude section was of moderate difficulty with emphasis on speed and accuracy, while in the technical section, strong fundamental knowledge was sufficient.

Sample Questions Asked

- Identify the current or voltage when source values are changed.
- Calculate the speed of an induction motor given frequency and number of poles.
- Determine the output voltage of a controlled rectifier for a given firing angle.
- What happens to slip and rotor current when the load on an induction motor increases?
- A train crosses a pole in 10 seconds and a platform in 25 seconds—find the length of the train and platform.
- If A can complete a work in 10 days and B in 15 days, how long will they take together?

ROUND 2 - Group Discussion

19th November 2025

This was a 20-minute online group discussion with 12 participants on the topic “Is Electric Vehicle (EV) the future of India?”. We were given 2 minutes to prepare, after which the discussion began. Unlike a traditional GD where candidates speak continuously, this session was more interactive and panel-driven. The panel actively pointed out each and every person in the discussion and asked their thoughts about each topics.

Tips to clear GD

- Prepare atleast 5 strong points for both sides during prep time.
- Start only if you have valid points and confidence.
- Avoid arguments with others.
- Missing a chance is fine; avoid repetition and wrong statements.
- Speak clearly, concisely, and with practical engineering logic.
- Use stats, examples and real life incidents to support your points.

ROUND 3 : Technical Interview

22nd December 2025

The Technical Interview lasted about 20 minutes and began with a self-introduction followed by questions on substations. The discussion focused on transformers, electrical machines, and basic PLC concepts. The panel then moved to project-related topics. Overall, the interview was concept-driven and interactive, emphasizing fundamental understanding, ability to connect concepts, and clear explanation of projects. Strong basics in electrical machines, PLC, and power electronics were sufficient to handle this round confidently.

Sample Questions Asked

- Have you visited a substation? What are its main components?
- Explain the working principle and applications of a transformer.
- What is another application of a transformer apart from voltage conversion?
- Which machine works on a principle similar to a transformer?
- Difference between synchronous and asynchronous motors and give its applications.
- What is PWM and PTO and why it is different?
- Simple latching and interlock ladder logic programs.

ROUND 4 : Techno Managerial Interview

12th January 2026

The fourth round was a combined Technical and HR interview conducted online. The panel consisted of the Head of the FA Department and the Head of HR. It began with HR questions, followed by discussions on basic electronics, transformers, motors, and my project, along with topics like CNC, PLC, and control systems. The focus was on conceptual clarity, practical understanding, and honesty.

Sample Questions Asked

- Why did you choose Electrical and Electronics Engineering?
- How do you think FANUC suits your career goals and skill set?
- What is a diode? How is a diode connected in a circuit?
- Explain the working of Zener diode and give some applications.
- What controller was used in the project? Mention its specifications.
- Difference between a controller and a processor.
- Difference between PLC and CNC.
- What is Bode Plot and where it is used and what can we analyse from it?
- Are you willing to work at any location across India?

Result and Offer Letter

On 19th January 2026, I received the offer letter for FANUC India internship. From the first online test to the final interview, the entire selection process took nearly three months. This phase taught me one important lesson — patience is key.

What I'd Tell My Juniors

- Trust your fundamentals more than shortcuts.
- Keep at least 3 projects where one should be of pure core project.
- Keep your resume simple and clear.
- Start your placement preparation as early you can.
- It is must to study languages like C, C++.
- ·Not knowing an answer is okay, but pretending to know is not. Stay honest.
- Stay calm throughout the process and avoid overthinking results.

"பெரிதினும் பெரிது கேள்"

UMAMAHESHWARI S

umassk20@gmail.com

6379686971

My college life has been a journey of gradual growth, self-discovery, and building discipline. Entering college, I had many aspirations but not a very clear direction. Over time, through academics, friendships, and everyday experiences, I began to understand my strengths and areas where I needed improvement. There were moments of confidence and achievement, as well as moments of doubt and pressure, but each of them shaped my mindset and helped me grow into a more focused and responsible individual.

Alongside my college studies, I have been preparing for competitive examinations with the goal of pursuing higher studies and expanding my career opportunities. This journey has taught me the importance of consistency, time management, and self-discipline. Balancing academics with preparation was not always easy, but I slowly learned to organize my schedule, stay committed to daily practice, and keep improving step by step. Even during challenging phases, I realized that persistence matters more than immediate results, and every small effort adds value to the bigger picture.

This experience has changed my perspective toward learning and personal growth. I have become more determined, patient, and aware of my long-term goals. It is a journey that continues to shape me every day, both academically and personally.

“Every journey to success begins with a curious beginner who stays consistent and trusts the process.”

VISHAAL S

APTIV COMPONENTS

BENGALURU

vishaalsaravanan2004@gmail.com 7010984267

The placement season on campus is always a whirlwind of emotions, and my experience with Aptiv was no different. When Aptiv - a global technology giant known for developing advanced safety systems and high-performance electrification solutions for a greener future - announced their visit to our campus, the excitement was palpable. They were offering both Internship and Full-Time roles, but the stakes were high: a strict 70% eligibility criteria across all academics with no active backlogs.

ROUND 1 : Online Assessment

The First Hurdle: The Online Assessment, My journey began at the ITech Labs with the first round, an online assessment hosted on HackerRank. It was a rigorous mix of multiple-choice and subjective questions testing our grasp on technology, aptitude, and coding basics, topped off with two core coding challenges. The pressure in the lab was intense, but I managed to navigate through the problems, hoping it was enough to see me through to the next day.

ROUND 2 : Technical Interview

Day 1: The Technical Grilling and the Midnight Wait I cleared the first round and found myself at the Tech Placement Cell for Round 2, the Technical Interview. For forty minutes, the interviewer tested my foundational knowledge. We started with a self-introduction and quickly moved into basic coding concepts, like function declarations and calls, before diving deep into my resume projects.

When the interview concluded, a nerve-wracking waiting game began. Some candidates were immediately pushed to the next round, while others, like me, were told to wait. The suspense stretched long into the night, finally breaking at midnight when the final shortlist was announced. I had made the cut for Day 2.

ROUND 3 : Techno Managerial Interview

Day 2: The Ultimate Test of Patience Round 3 was a grueling one-and-a-half-hour Techno-Managerial Interview. This wasn't just a test of my technical knowledge; it was a test of my character. The interviewer grilled me on EV architecture, the lifecycle of embedded systems, and basic coding operations like post-and pre-increments.

But the real challenge was behavioral. They purposely pushed my buttons to see if I would panic under pressure. At one point, the interviewer and I found ourselves in a literal debate over where the charging port is located on an Electric Vehicle. I confidently stated it would be in the rear fender, while he adamantly argued it would only be near the front fender or bumper. Instead of backing down or losing my cool, I smiled, maintained my polite tone, and eventually convinced him that the placement actually varies based on the manufacturer. It was a crucial lesson: knowing the answer is only half the battle; how you communicate it matters just as much.

ROUND 4 : HR Interview

The Final Boss: The HR Interview Barely five minutes after that intense debate, I was called in for the final HR round. Knowing they would ask general behavioral questions, I strategically steered my self-introduction to highlight the management skills I had honed during college events like Yukta and my time with Velocita Racing. This automatically answered most of the HR's unasked questions.

When the floor was opened to me, I didn't hold back. I asked about the company's work-life balance and international opportunities. We ended up having a great, relaxed chat about our personal hobbies and his own journey into the company. I walked out feeling incredibly positive.

THE PLOT TWIST: The Result

Initially, the word around campus was that no one from ITech had been selected. I had moved on. But life had other plans! Five months later, on a random evening, I received a surprise call from the Aptiv HR asking about my availability. After discussing the job details, I was finally offered the Intern + Full-Time role!

My PLAYBOOK: Tips for Juniors

1. On Academics & Prep:
   - CGPA is just an entrance ticket. Your skills do the talking inside the room.
   - Be completely honest and well-prepared to explain everything on your resume.
   - For technical questions (outside of projects), what you study for your semester exams is usually enough. For coding, a basic, solid foundation in C and Python is sufficient.
2. On Communication:
   - Take control: Set the pace of the interview. Never use technical jargon that you can't confidently explain.
   - The 5-Second Rule: Never stay silent for more than 5 seconds after a question is asked.
   - Team Mindset: Never use singular tenses (like "I did this") when explaining group projects. Use "We" to show you adapt well to team environments.
   - Handling the Unknown: Never just say "I don't know." Tell them you are actively learning and emphasize that you are a fast learner.

"YOUR ATTITUDE, NOT YOUR APTITUDE, WILL DETERMINE YOUR ALTITUDE." - ZIG ZIGLAR

SO ALWAYS KEEP IT POSITIVE !!

ABIJITHRAJ D

abijithraj431@gmail.com 6385383787

My journey with PSG Institutions started at 2020 as the younger self of me joining Diploma at PSG PTC and I remember the day I first entered the PSG iTech Campus at 2023 and the first people I met, Days went fast that I still remember the first day at the campus if it was long ago I would have forgotten, days erase fast but memories wont.

My perspective of college is that you learn life more than the academic syllabus your book holds, you will get to know lot of people that you haven't and can't get more people like this around you in your timeline of your presence, lecturers and faculties always have a right direction for you but hesitation makes us ask less about direction from them so don't hesitate asking. And I always took inspiration from people around me for small things since you wouldn't know what a scientist from eighteenth or nineteenth century would have did in your situation so I always picture a person who's apt for this situation and I'll think how they would have handled. Carry a good heart everywhere that would be the reason people stay long beside you not the knowledge or anything that extinguish once you gave them.

Academically did projects – Traffic monitoring automatic IP Blocking for web servers, Sensorless BLDC Motor Control, Power Quality Monitoring and control in Solar Microgrid -basically explored every domain of the course through projects. Did two weeks internship at a switchgear manufacturing company.

Witnessed different people with different thoughts and with different perspective towards the world, that's strong enough to sketch myself the meaning of life.

What what Things what what Time Happeno that that Things that that Time Happen ae Happen,

Let it Happen.

DHANRAJ VR

dhanraj12j@gmail.com

9626040252

My academic journey took a unique path as I transitioned from a diploma background into pursuing a B.E. in Electrical and Electronics Engineering. The shift from diploma to engineering was not easy, as the depth of concepts and pace of learning were quite different from what I was used to.

In the beginning, coping with advanced subjects and academic expectations was challenging. I had to put in extra effort to strengthen my fundamentals and adapt to a more analytical and concept-driven approach. There were moments of difficulty, but they pushed me to work harder and stay determined.

Over time, with consistent effort and a willingness to learn, I was able to bridge the gap and gain confidence in my abilities. I focused on understanding concepts clearly and gradually improved my performance, which made the journey more manageable and rewarding.

Believe in your ability to adapt and never give up.

ENBHARAJAN M

FANUC INDIA Pvt. Ltd

BENGALURU

enbharajanm@gmail.com

9626222171

About The Company

FANUC India is a leading industrial automation company known for its CNC systems, robotics, and factory automation solutions, with a strong reputation for precision and reliability. The interview process started when I came across an off-campus internship opportunity for the Factory Automation department and shared my resume with the recruitment team via email. It was a 6-month internship with the possibility of full-time conversion based on performance. After a few days, I received confirmation that my resume had been shortlisted, and I was informed about the selection process.

ROUND 1: Online Test

The first round was an online assessment consisting of aptitude and technical questions with an easy to moderate difficulty level. The aptitude section included topics like percentages, ratio and proportion, logical reasoning, and basic analytical problems. The technical section focused on fundamentals such as electrical basics, motors and drives, PLC concepts, sensors, and CNC signals. Questions like “What is PLC?”, “Difference between AC and DC”, and “What are G and M codes?” were asked. The questions were straightforward, but time management was important. This round mainly tested clarity in basic concepts.

ROUND 2: Group Discussion

The second round was a group discussion to evaluate communication skills, teamwork, and confidence. The panel observed clarity of speech, idea presentation, and listening skills. I ensured that I spoke clearly, contributed meaningful points, and respected others’ opinions. I focused more on the quality of my points rather than speaking frequently.

ROUND 3: Technical Interview

The third round was a technical interview focusing on my resume, projects, and practical knowledge. I was asked to explain my project, challenges faced, and how I solved them. Questions were also asked from PLC, CNC basics, industrial automation, electrical fundamentals, motors, and troubleshooting. Follow-up questions were asked to test my depth of understanding. The focus was more on logical thinking and real-time application rather than memorized answers.

ROUND 4: Technical + HR Interview

The final round included both technical and HR questions. In the technical part, I was asked situational questions like handling machine breakdowns, identifying electrical or mechanical faults, safety procedures, and signal communication. In the HR part, questions were asked about my background, interest in FANUC, willingness to relocate, career goals, and strengths and weaknesses. This round mainly evaluated my attitude, flexibility, and willingness to learn.

All the rounds were conducted smoothly, and at the end of the process, I was selected for the internship role. The experience helped me understand industry expectations and the importance of strong fundamentals, practical knowledge, and communication skills.

To all my juniors, I want to share a small piece of advice from my experience: don't get discouraged if you are not placed through campus interviews. I attended several companies during campus placements, but I didn't receive any positive response till the very end. However, I eventually secured a great job through an off-campus opportunity in a reputed company. This taught me that opportunities are not limited to campus—there are many more paths than you think. Success is not based only on hard work; it also depends on timing and the right opportunity. So keep improving your skills, stay confident, and keep trying. The right opportunity will come your way. Never stop believing in yourself.

"I fear not the man who has practiced 10,000 kicks once, but I fear the man who has practiced one kick 10,000 times." — Bruce Lee

So repeat, refine, dominate.

HARISH V

evharish003@gmail.com 9342882572

In 2023, I began my engineering journey with great enthusiasm and a desire to explore new opportunities. This marked the start of an important phase of learning and personal growth.

During my college years, I worked on several projects, with Robotic Arm Control Using EMG Sensor being one of the most significant. This project involved controlling a robotic arm using muscle signals, helping me gain practical knowledge in sensors and control systems. I secured 2nd priz
which motivated me to further explore my field.

I was also an active participant in the National Service Scheme (NSS) during 2024 and 2025. Through NSS, I engaged in community service activities that strengthened my sense of responsibility, teamwork, and leadership.

Along with academics, I actively participated in sports like badminton and cricket. I achieved runner-up positions twice and was part of a ball badminton team that won first place, which taught me discipline and teamwork.
Overall, my college journey has helped me develop technical knowledge and essential life skills like time management, confidence, and leadership, preparing me for the future.

“My journey shaped me more than my achievements ever could.”

LINARC INC

CHENNAI

jeganvenkat2@gmail.com

+91 8825526463

ROUND 1

The first round spanned 150 minutes and was divided into two parts.
The MCQ section (60 minutes) covered core areas across the stack such as networking, data structures, databases, AWS services, Docker, Jenkins and frameworks like Vue.js and Django REST. It required quick recall and conceptual clarity.
The coding section (90 minutes) included three problems:

- Dynamic Programming (3D problem)
- Disjoint Set Union
- Advanced Balanced Trees

I fully solved the DP problem, passed 15/20 test cases in DSU, and 12/20 in the tree problem. Despite partial completion in two, my approach and optimization were sufficient to clear the round, and I received an immediate callback.

ROUND 2

This round, conducted by SDE1 and SDE2 engineers, focused on applied knowledge and real-world development.
I was tested on:

- Dynamic Programming through live problem-solving
- Django REST by designing CRUD APIs, including serializers and endpoint structuring
- ORM concepts and query handling
- Docker, Jenkins, and Git fundamentals
- PostgreSQL design and efficiency

The discussion extended into system-level thinking, including API latency, bottlenecks, and throttling strategies. The emphasis was on clarity, decision-making, and practical understanding.

ROUND 3

The third round was conducted by the Head of Engineering and was more focused on depth of understanding, problem-solving mindset, and innovation.
A significant part of this discussion revolved around my patent work on vehicle speed estimation and license plate recognition. I explained:

- The core idea and motivation
- Limitations of existing speed camera systems
- How my approach improves efficiency and adaptability

This led to further technical discussions, including:

- Microservices architecture
- FastAPI and its advantages
- Debugging strategies
- Root Cause Analysis (RCA)

I was also tested on how I approach unexpected system issues and how effectively I can trace and resolve them. This round emphasized practical engineering thinking rather than just theoretical knowledge.

ROUND 4

The final round focused on behavioral and career-oriented discussions.
Key topics included:

- My academic transition from Electrical and Electronics Engineering (EEE) to Computer Science
- The reasoning behind choosing a career in IT
- The learning curve involved in this transition
- My past experiences and how they shaped my technical journey
- My future goals and alignment with the company
- How I plan to contribute to the organization

This round assessed clarity of purpose, adaptability, and long-term vision.

He who has a why to live can bear almost any how

Friedrich Nietzsche

ROUND 1 - Technical Interview (Telephonic)

The first round was a technical interview conducted through a telephonic call. The interviewer began with a brief self-introduction, followed by questions based on Electrical Machines, Power Systems, and Transformers.

- What is a Transformer?
- What are the main parts of a transformer?
- What is an Insulator?
- What is a Buchholz Relay?
- Explain the working of a Buchholz Relay.
- What is a Conservator Tank in a transformer?
- How and why is transformer oil stored?
- What is CT (Current Transformer) and how does it work?
- How are windings made in CT?
- Difference between CT and PT.
- Difference between Circuit Breaker and Isolator.
- What is Power Factor?
- How is reactive power compensated?
- What is a capacitor and why is it available in different ratings?

Industrial Exposure Questions

- Questions related to my Industrial Visit at Padmavahini Transformers
- What practical learning I gained during my project work

Academic Questions

- Which subjects were studied in the previous semester

✓ I answered Embedded Systems and PLC

- What is an Embedded System?
- What are Inputs and Outputs in an Embedded System and how are they connected?

➢ Overall Difficulty: Easy to Moderate

➢ Focus Area: Fundamentals + practical understanding

ROUND 2 - Technical + HR Interview (Video Call)

The second round was conducted through a video call and included both Technical and
HR questions. The interview focused mainly on project work, transformer design, and power system fundamentals.

- Have you designed a transformer?
- What is the use of a transformer in a spot welding system?
- Explain the transformer specifications (Input/Output voltage and current).
- Number of turns and type of wire used.

✓ To answer professionally, I explained with technical clarity:

➢ Primary winding: 19 SWG Aluminium wire

➢ Secondary winding: 6 SWG Fibre-Reinforced Aluminium wire

- Why aluminium wire was used instead of copper?
- Difference between Copper and Aluminium conductors.
- What supply do we receive in our home?
- Why single-phase and three-phase supplies are used?
- What is three-phase power formulas.

Final Outcome

The results were announced on the same day, and the offer letter was issued immediately.

Final Advice

- To anyone preparing for interviews in core electrical companies...
- Be consistent in your learning and efforts—small daily progress leads to big results.
- Build strong fundamentals and try to relate concepts with practical applications.
- Never lose hope during preparation—hard work never fails, it always pays off at the right time.
- Stay confident and calm during interviews; pressure reveals true potential.

Trust the process and keep moving forward—miracles often happen suddenly when you least expect them.
Good luck to all future aspirants!
Never give up.

ROUND 1 - Writtern Test (mcq)

The first round was an offline written test conducted to assess both aptitude and core technical knowledge. The total duration of the test was 40 minutes, consisting of 30 multiple-choice questions.
The test was divided into two sections:

- Section 1 – Aptitude (Easy Level):

This section included 10 questions covering basic aptitude topics such as percentages, ratios, time and work, and logical reasoning. The questions were of easy difficulty and tested fundamental problem-solving skills.

- Section 2 – Technical:

This section included 20 questions focused on core concepts related to sensors, PLC (Programmable Logic Controller), and industrial automation. It also included numerical and conceptual questions on resolution and accuracy. The questions were designed to evaluate practical understanding and application of electrical and automation concepts.

ROUND 2 -HR Interview

The second round was an HR interview conducted to evaluate the candidate's background, communication skills, and basic understanding of the company. The interview duration was approximately 10 minutes.
The discussion primarily focused on:
Background verification, including academic details and personal information
Awareness about the company, where candidates were asked about the company profile and the products/parts being manufactured
Behavioral questions, assessing attitude, confidence, and communication skills
Relocation flexibility, including willingness to work in different locations
Candidates were also informed about the next round, which would be conducted in Chennai, and were advised to prepare for PLC-related concepts for further technical evaluation.

ROUND 3 -Technical Interview

The third round was a technical interview aimed at evaluating the candidate's in-depth knowledge of electrical engineering concepts and practical industrial applications. The interview lasted for approximately 1 hour.

The interview started with a self-introduction, followed by detailed discussion on internship experience and academic projects. Candidates were expected to explain their projects clearly, including the reason for selecting each component and the overall design approach.

The questions were focused on core electrical and automation topics, along with real-time industrial scenarios. The key areas covered include:

- Electrical Machines and Industrial Applications
- Types of motors used in industries and their specific uses
- Control Panels and Components
- Panel boards, relays, and contactors
- Starters such as DOL (Direct-On-Line) and Star-Delta starters
- Earthing and Safety
- Difference between earthing and grounding
- Importance of safety in electrical systems
- Power System Concepts
- Load and power calculation for a room
- Power factor and its significance
- Automation and PLC
- Basics of PLC (Programmable Logic Controller)
- Ladder logic, latching concepts
- Solving a basic ladder logic problem
- Industrial Problem Solving
- Scenario-based questions (e.g., actions to be taken in case of fire in an industrial environment)
- Power Electronics and Panels
- Inverters and their applications
- Overview of HT (High Tension) and LT (Low Tension) panels

"In the middle of difficulty lies opportunity."
– Albert Einstein

RAMAKRISHNAN A

ramkrishanandaraj@gmail.com 8190919246

My college journey has been driven by a constant urge to take up challenging projects that push me beyond my comfort zone. Instead of choosing the easy path, I was always curious to explore complex problems and find ways to solve them, even when the process seemed difficult at the start.

Working on such projects was never smooth—there were moments of confusion, failures, and repeated trials. But each obstacle became a learning opportunity, helping me improve my problem-solving skills and develop patience. I learned to break down complex tasks into smaller parts and approach them step by step.

What kept me going was the sense of satisfaction I felt after completing each challenge. Successfully finishing a tough project gave me a strong sense of achievement, almost like a reward that motivated me to take on even bigger challenges

DO NOT AVOID DIFFICULT TASKS

SAVITHA S

23e608@psgitech.ac.in

+91 74185 26977

My academic journey began with a Diploma from PSG Tech, where I built a strong foundation in technical concepts and developed a genuine interest in my field. This experience motivated me to pursue a B.E. in Electrical and Electronics Engineering at PSG iTech, where I continued to expand my knowledge and skills.

Transitioning into engineering brought new challenges, but my consistent and disciplined approach helped me adapt quickly. I focused on understanding concepts deeply and applied them through continuous learning and hands-on work, which strengthened my confidence over time.

I actively participated in various projects and competitions, where I had the opportunity to showcase my ideas and technical abilities. Winning multiple project awards was a result of my dedication, teamwork, and commitment to delivering quality work.

TRUST YOUR HARDWORK

SRIKANTH R

TONBO IMAGING

BENGALURU

srikanthrathinamvr@gmail.com 7502096064

About The Company

Tonbo Imaging is a technology company specializing in advanced imaging and sensing solutions, particularly for defense, surveillance, and autonomous systems. The company focuses on developing high-performance electro-optical systems with strong emphasis on real-time processing, embedded systems, and rugged design standards used in military applications.

Technical Interview

The interview was an off-campus process and consisted of a single technical round conducted on Microsoft Teams, which lasted for around 1 hour 30 minutes.

The interview mainly focused on evaluating my core electronics knowledge, problem-solving ability, and practical understanding of concepts. It began with a discussion about my academic project, where I explained the overall design, components used, and working principle. The interviewer asked me detailed questions to assess my depth of understanding, design choices, and real-time challenges faced during the project.

Then, the discussion moved across multiple technical domains in a continuous manner:

- They asked me about communication protocols such as I2C and SPI, including differences in speed, number of pins, data transfer methods, and their suitability in low-power applications.
- They asked me basic C++ programming concepts to evaluate my coding fundamentals and logical thinking.
- They gave me a circuit and asked me to analyze it, explain the power flow, identify the role of components, and solve practical scenarios based on it.

Further, they continued with core electronics concepts:

- They asked me about the voltage divider, its working, and the loading effect in practical circuits.
- They asked me about capacitor behavior under DC conditions and at high frequencies.
- They asked me to explain the role of an inductor and the working and importance of a flyback diode in protection circuits.

In the embedded systems section, they focused on real-world debugging:

- They asked me how to debug a microcontroller that is not booting, where I explained a structured approach by checking:
  - Power supply stability
  - Clock signal availability
  - Reset circuitry
  - Firmware and programming issues

They also tested my understanding of analog and power electronics:

- They asked me about op-amp limitations, including gain, bandwidth, and output headroom.
- They asked me to explain an RC low-pass filter and how to calculate its cutoff frequency.
- They asked me to compare linear and switching regulators based on efficiency, heat dissipation, and noise performance.
- They asked me about using a transistor as a switch, including base resistor calculation and interfacing it with a microcontroller to drive loads.

Finally, they moved to some advanced and conceptual topics:

- They asked me about EMI and EMC basics and their importance in electronic design.
- They asked me to explain Thevenin's theorem and its practical applications in circuit simplification.
- They asked me about the Nyquist theorem related to signal sampling and its significance.

Overall, the interview focused on strong fundamentals, practical thinking, and clear explanation of concepts. They expected me to justify my answers logically and relate them to real-world applications rather than just giving theoretical definitions.

"Aim high and move forward with confidence"

From Passion to Leadership

The EEE Association

AMITA ANAND
JANATH J
LEVIN RICARDO P

LEVIN RICARDO P - PRESIDENT

AMITA ANAND - TREASURER

JANATH J - SECRETARY

As part of the EEE Association, we actively organized and executed a wide range of workshops, seminars, guest lectures, and technical events aimed at enhancing students' practical knowledge and industry exposure. We were involved in end-to-end event management, including ideation, planning, budgeting, sponsorship coordination, and smooth execution. We also initiated interactive sessions, competitions, and hands-on training programs to encourage innovation and active participation among students. Through these efforts, we strengthened teamwork, leadership, and organizational skills while creating a dynamic learning environment within the department.

BRINDHA SHREE C C
DHANESH GHANTHAN C

BRINDHA SHREE C C - COORDINATOR

DHANESH GHANTHAN C - EXECUTIVE MEMBER

As part of the EEE Association, we collectively contributed to its functioning by supporting coordination, facilitating communication among members, and ensuring the smooth progress of various initiatives. We actively collaborated, assisted in operational tasks, and contributed ideas that enhanced student engagement and participation. Through our combined efforts, we strengthened teamwork, shared responsibility, and contributed to the overall growth of the department community.

The Pulse of Dance

Prasidha P

I served as Joint Secretary of the iTech Dance Club which gave me the chance to lead and coordinate many performances, each one filled with late night rehearsals, last minute choreography tweaks, and the excitement of pulling everything together. My dance journey truly began in college when I first stepped onto the stage during celebrations. What started as simple performances soon grew into a community, our team went on to participate in competitions, giving me both exposure and excitement. Balancing academics with dance was never easy, but it taught me discipline, time management, and gave me immense confidence that extended far beyond the stage. Yet beyond the applause, what I treasure most are the memories created within the club, the laughter, the bonds between seniors and juniors, and the supportive community we built together. Dance has been more than just an art form; it has been a journey of growth, connection, and joy that shaped my college years, and the confidence it gave me is something I will carry with me always.

Symphony of Talent

Nithin Abhishek R

The Itech Music Club is essentially a second home for anyone at college who loves sound. It’s a group of people from all departments coming together to jam and share their favorite tracks. We spend a lot of time in the music room just experimenting with new covers or helping each other prep for stage performances. It’s definitely the best place to find your 'tribe' outside of the classroom!

TEAM AURORA

Kamali S - Technical Lead
Selvadharshini S - Electrical Lead

- An interdisciplinary student team focused on designing and developing a Mars Rover to simulate real-world space exploration challenges.
- Actively participates in competitions such as the International Rover Challenge (IRC), International Rover Design Challenge (IRDC), and European Rover Challenge (ERC).
- Comprises multiple subsystems including electrical, mechanical, embedded systems, Communication, and ROS, working together for efficient rover performance.
- Promotes teamwork, innovation, and hands-on learning while representing the institution on national and international platforms.

FORMULA BHARAT

Lakshma Narayanan JB -Technical Engineer
Mugesh G -Technical Engineer
Sarvessa Jagenathan -Technical Engineer
Vishaal S -Technical Engineer

- Velocita Racing is a student-driven motorsports team that actively participates in Formula Bharat, showcasing innovation and engineering excellence. The team focuses on designing and building Formula-style race cars that meet stringent international standards. It serves as a platform for students to apply classroom knowledge to real-world automotive challenges, bridging the gap between theory and practice.

- The team comprises passionate students from diverse engineering backgrounds who collaborate across domains such as mechanical design, electrical systems, and vehicle dynamics. From initial concept development to final assembly, every stage of the car is handled in-house. This includes CAD modeling, simulations, fabrication, and rigorous testing to ensure optimal performance and reliability on track.
- Participation in Formula Bharat goes beyond racing. Teams are evaluated in multiple static and dynamic events such as design evaluation, cost analysis, business presentation, acceleration, endurance, and efficiency tests. Velocita Racing consistently demonstrates strong performance through disciplined execution, strategic planning, and effective teamwork in these demanding events.
- Over the years, Velocita Racing has built a reputation for technical competence and innovation. The team provides students with invaluable hands-on experience in engineering, project management, and problem-solving under pressure. It continues to shape future engineers into industry-ready professionals while contributing to advancements in motorsports and automotive technology.

E-BAJA

Levin Ricardo P
Pradeep V

My journey with the E-Baja team was one of the most valuable and memorable experience of my college life. Working in a diverse 25-member team comprising students from various streams provided immense exposure to teamwork, collaboration, and technical learning through knowledge sharing. The journey involved continuous learning, practical application, testing, adapting to challenges, and finally achieving the desired outcome. Being associated with a multidisciplinary team for an entire year and coordinating with different people within and beyond the institution helped me develop valuable life skills such as time management, handling pressure, analytical thinking, problem-solving, leadership, communication, decision-making, adaptability, responsibility, and project management. This experience not only enhanced my practical knowledge but also shaped me personally and professionally

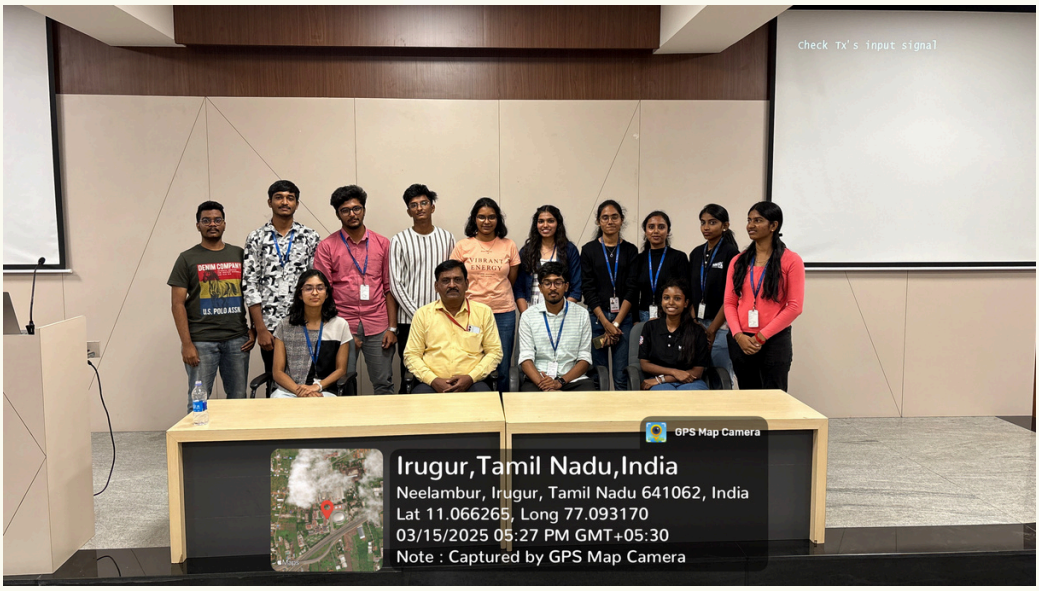
NSS

Lakshma Narayana J B - Secretary
Saghanaa T - Joint Secretary
Tharika S - Executive Member

Actively involved as a group in National Service Scheme (NSS) activities over multiple academic years, contributing to various community development initiatives such as cleaning drives, tree plantation, and maintenance of public spaces including schools and temples. The team also engaged in rural outreach programs through wall painting, social awareness rallies, and organizing cultural activities for children, promoting creativity and community bonding.

A group of students—**Kamali S, Sanju Shree V, Madhivadhani K, Tharika S, Saghanaa T, Varma R V, Harish V, Lakshma Narayanan J B, Cokeshkanna S T, Mugesh G, Amalan Joseph J, and Ragul Prasath V**—actively participated in a 7-day NSS camp at Kumarpalayam from April 5th to 11th of 2024, where they contributed to grassroots-level service and community engagement.

Itech
Intellect Quiz Club



Shrinithi - President
Aieshwariya - Secretary

In college, we had the opportunity to lead the iTech Quiz Club.Together, we organized and conducted various quiz events, including inter-college competitions and events during Yukta, creating a platform for students to learn, compete, and engage. From setting questions to hosting rounds on stage, every event became a valuable learning experience.We also explored creative ways to build engagement, using social media content and reels to generate excitement and encourage participation. Coordinating with team members, managing timelines, and ensuring smooth execution helped us develop strong organizational and leadership skills, while also building confidence in anchoring and managing events.

What made this journey truly special was the people. The club brought together students from different departments who shared a common curiosity and enthusiasm for learning. Through every quiz we hosted, we built meaningful connections, grew in confidence, and discovered a genuine passion for bringing people together through ideas.

The energy of a live quiz round, the thrill of close finishes, and the moments of laughter between rounds are memories we will carry with us beyond college. We remain deeply grateful to everyone who supported us throughout this journey, especially our seniors and Dr. R. S. Sankara Subramanian, for their invaluable guidance and encouragement.

Women Empowerment Cell

Michelle Ann Cedric

My Journey with the Women Empowerment Cell

What began as a simple step — joining the Women Empowerment Cell as a member — has grown into one of the most defining chapters of my college life. Today, as Vice President of the WEC, I look back at this journey with immense gratitude and pride.

Being part of the WEC gave me far more than a position — it gave me purpose. I had the privilege of organising various events, collaborating with other clubs, and building connections across our college community. One of the most rewarding experiences was curating interactive talks with powerful women from diverse backgrounds, creating a space where the girls of our college could feel seen, heard, and inspired. We didn't shy away from pressing issues — we brought them to the table and talked about them openly and honestly.

From hosting MCs for events, driving student participation, and coordinating behind the scenes, every responsibility was a lesson in leadership, resilience, and teamwork.

But above all, what the WEC gave me most profoundly was a voice — and the courage to use it. It taught me that speaking up against injustice is not just a choice, but a responsibility. And I carry that strength with me every single day.

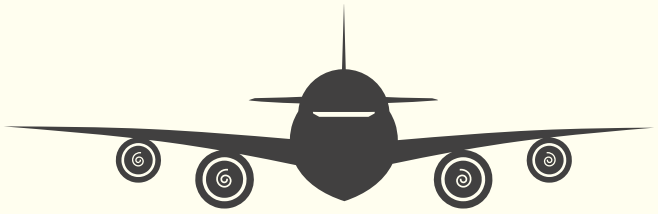
Clubs & Roles

NAME	CLUB	ROLE
Lakshma Narayanan J B	Youth Red Cross	Student Co-Ordinator
Lakshma Narayanan J B	Red Ribbon Club	Student Co-Ordinator
Amalan Joseph J	Higher Education Forum	Student Co-Ordinator
Amalan Joseph J	Tarangini	Cheif Designer

SPORTS

Brindha Shree C C

I served as the Joint Sports Secretary of our college for the year 2023-24, where I had the opportunity to plan and conduct various sports events. Firstly to be honest I was not so interested in taking up this position but our assistant physical directress Mrs.Vaishnavi R was the one who suggested me to take up this role. This position taught me so many life lessons that studying or learning cannot provide, it was such a defining experience of my college life. I also got the opportunity to serve as the captain of the college volleyball team (women). Both these positions shaped me into the person who I am today. It taught me the importance of leadership, teamwork and the art of balance between academics and extracurriculars.



LEADERS IN UNIFORM

NATIONAL CADET CORPS

KAMALI S

Senior Under Officer of NCC (2024-2025)

Served as the Senior Under Officer, leading and managing cadet activities with a strong focus on discipline and teamwork. Conducted regular parade sessions, guided and mentored juniors, and actively participated in Annual Training Camps, demonstrating leadership and organizational excellence.

AMITA ANAND

Cadet Under Officer of NCC (2024-2025)

Being a Cadet Under Officer (CUO) in the National Cadet Corps is a mark of discipline, responsibility, and leadership. A CUO leads by example—commanding parades, guiding junior cadets, and upholding the values of unity and service.This role builds confidence, decision-making skills, and a strong sense of responsibility. More than just a rank, it represents dedication, teamwork, and pride in serving with integrity.

BALAJI V

Cadet Under Officer of NCC

(2024-2025)

Worked towards achieving the rank of Cadet Under Officer (CUO) in NCC through consistent discipline, leadership, and commitment. Completed two intensive 10-day camps involving rigorous training, drills, and team activities, and actively participated in regular parades to develop command skills, punctuality, and coordination. These experiences strengthened confidence and leadership abilities, contributing to progression towards the CUO rank.

SUDHAN A

Corporal (CPL)

JIJENDRA KUMAR R

Sergeant (SGT)

Actively participated in NCC camps, gaining experience in field training, discipline, and teamwork. Mentored junior cadets, assisted in drill practices and parade coordination, and contributed to unit activities with strong commitment and leadership.

ACHIEVEMENTS

AMALAN JOSEPH J

First Prize – Naan Mudhalvan – Oracle – EBPL Hackathon

- Secured First Prize for the project titled “Next-Gen Recommender System” in a state-level hackathon organized by the Government of Tamil Nadu under the Naan Mudhalvan initiative in collaboration with Oracle and EBPL.
- Designed and presented a recommender architecture focused on intelligent personalization using data-driven decision models.
- Demonstrated practical implementation capability, scalability considerations, and real-world applicability during technical evaluation.
- Competed against multidisciplinary teams across the state, with assessment based on innovation, feasibility, technical robustness, and presentation clarity.
- Validated competence in applied machine learning, system architecture design, and competitive problem-solving under time constraints.

AMALAN JOSEPH J

Star Speaker & NPTEL Star Award Recipient – NPTEL Star Event 2025

- Invited as a Star Speaker at the NPTEL Star Event 2025 held at IIT Madras.
- Delivered a stage presentation outlining academic engagement, certification strategy, and learning outcomes through NPTEL courses.
- Received the NPTEL Star Award from Dr. Andrew Thangaraj (NPTEL Coordinator, IIT Madras).
- Recognized for sustained academic excellence and consistent performance across multiple certified courses.
- Represented institutional academic achievement at a nationally recognized platform.

AMALAN JOSEPH J

Young Innovator Award – 2025

- Awarded Young Innovator Award (2025) in recognition of sustained innovation and project-based contributions.
- Acknowledged for interdisciplinary problem-solving across AI, IoT, and energy systems.

AMITA ANAND

RIFLE SHOOTING - 1.5cm GROUPING

Achieved an exceptional level of precision in rifle shooting by consistently maintaining a 1.5 cm grouping, demonstrating outstanding focus, control, and technical proficiency. This accomplishment reflects strong discipline, steady aim, and the ability to perform with accuracy under pressure.

KAMALI S
LAKSHMA NARAYANAN J B

Best Idea Award Winner -UYIR Road Safety Hackathon

Developed an AI-based route optimization for heavy vehicle using real-time monitoring. Awarded the Best Idea Award along with a cash prize of ₹10,000. The solution was presented to a panel of government officials, including the District Collector, where it received approval and official orders for implementation. The first stage of implementation was also successfully executed, highlighting its real-world impact and feasibility.

AMITA ANAND
ASHAF M
NITHIN ABHISHEK R
JEGAN R V

Won 3rd prize in NAAN MUDHALVAN Zonal Hackathon 2025 conducted by Siemens and Tansam on Embedded Systems using Raspberry Pi

The project demonstrated strong hands-on skills in integrating sensors and modules with Raspberry Pi, along with the ability to troubleshoot and optimize performance in real time. It reflected practical understanding of embedded systems by successfully building a reliable and functional solution within a competitive setting.

CHAMPIONS IN ACTION

THE SPORTS SPIRIT

RANJANI A

2nd place - Chess

- Secured 2nd position in Anna University Zonal Tournaments (2022–2023) in Chess (Women), representing the institution with strong strategic and analytical skills.

RANJANI A

1st place - Chess

- Secured 1st position in Anna University Zonal Tournaments (2023–2024) and contributed as an active team member in Chess (Women)

3rd place - Basketball

- Won 3rd place in Anna University Zonal Tournaments (2025–2026) as part of the Basketball team, demonstrating versatility in both indoor and outdoor sports.
- Consistently represented the institution across multiple years in zonal-level sports events, showcasing dedication, teamwork, and competitive spirit.

BRINDHA SHREE C C
SAGHANAA T

3rd place - Volley ball

- Proud to have secured 3rd position in Anna University Zonal Tournaments (2022–2023) in Volley ball (Women), representing the institution with First laurel to college from a volleyball Women's Team.

h

2nd place - Volley ball

- Secured 2nd position in Anna University Zonal Tournaments (2023–2024) in Volley ball (Women) at RVS College of Engineering and Technology

BRINDHA SHREE C C

- Participated in CM trophy-Volleyball (September 2024)- Premier State Level Sports Tournament and also took part in Centies tournaments.

AKSHAYA D

- Participated in Anna University Zonal Tournaments (2022–2023) in Ball Badminton(Women), representing the institution with strong dedication and sports spirit.

JANATH J

- Participated in Anna University Zonal Tournaments (2023–2024) in Volley Ball(Men), representing the institution with strong competitive and sports spirit.

THARUN ADHITYA B

- Participated in Anna University Zonal Tournaments (2022–2023) in Kho-Kho(Men), representing the institution with strong competitive spirit.

NITHIN ABISHEK R

2nd place - Chess

- Secured 2nd position in Anna University Zonal Tournaments (2022–2023) in Chess (Men), representing the institution with strong strategic and analytical skills.

RAMAKRISHNAN A

- Participated in Anna University Zonal Tournaments (2023–2024) in Badminton(Men), representing the institution with strong competitive and sports spirit.

RAGUL P
DHANESH GHANTHAN C
MOHANA BALAJI S V

- Participated in Anna University Zonal Tournaments (2022–2023) in Cricket(Men), representing the institution with strong sports spirit.

- Participated in Anna University Zonal Tournaments (2024–2025) in Cricket(Men), representing the institution with strong team spirit.

EVENTS & WORKSHOP

WORKSHOP

EDGE AI Workshop (IEEE)

AMALAN JOSEPH J
ASHAF M
SHRINITHI G
BRINDHA SHREE C C

- Successfully organized the Edge AI Workshop at Yuktaha ’25 Symposium held at PSG iTech, Coimbatore, as a team, ensuring smooth coordination and full participation even before the event date.
- Collaboratively conducted hands-on sessions and conceptual learning on Artificial Intelligence, Embedded Systems, and TI MSP432, providing practical exposure to participants.
- Designed interactive activities such as coding challenges, quizzes, and engagement sessions to enhance the overall learning experience.
- With strong teamwork and guidance from faculty, the event received positive feedback and was recognized as a successful and impactful initiative.

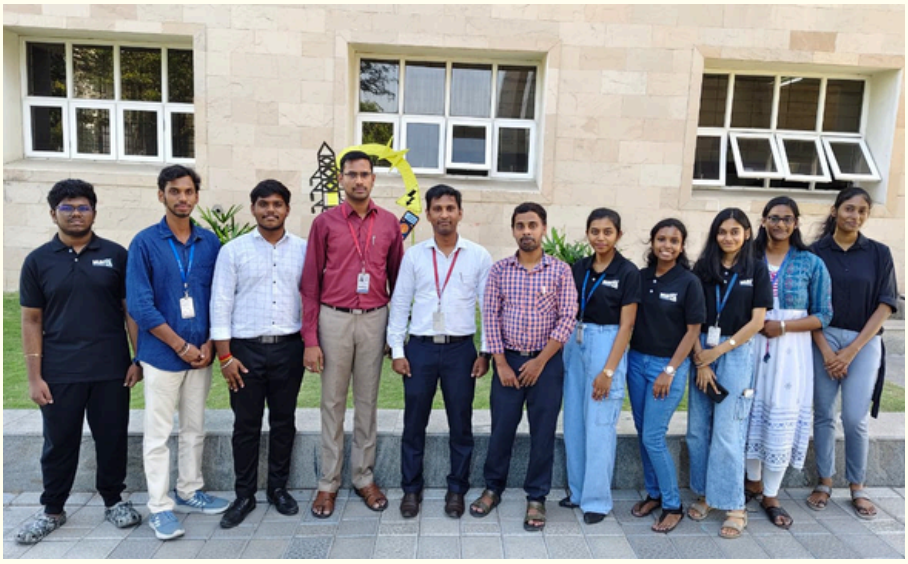
WORKSHOP

PLC FIESTA (IE)

SELVADHARSHINI S
RANJANI A
SARVESAA JAGANATHAN
THARUN ADHITYA B
ENBHARAJAN M

- Successfully organized the PLC Fiesta Workshop at Yuktaha '25 Symposium on 14th March, as a team, ensuring effective coordination and active participation from all attendees.
- The workshop provided hands-on experience in water level monitoring systems and Zelio software simulation, giving participants practical exposure to industrial automation concepts.
- Key concepts such as switches, timers, and counters were taught through interactive demonstrations and real-time applications.
- With collaborative teamwork and faculty guidance, the workshop was conducted successfully and received encouraging feedback from the participants.

WORKSHOP



EMBEDXPLORE

LAKSHMA NARAYANAN J B
PRADEEP V
JANANI K S
AIESHWARIYA M
MICHELLE ANN CEDRIC
MADHIVADHANI K

- EmbedXplore (Yuktaaha 2025): Focused on embedded systems & electronics; bridged academic learning with industry needs through hands-on work in microcontrollers, IoT, and real-time systems; helped explore emerging technologies and practical implementation
- Sessions & Learning: Led by Mr. Ravikrishna S and Dr. Sathiyanathan M; covered embedded concepts, system integration, and design methodologies through interactive sessions and practical demonstrations with real-world relevance
- Outcomes & Impact: Promoted innovation, problem-solving, and teamwork; improved technical, analytical, and collaborative skills; prepared students for real-world embedded systems industry challenges

WORKSHOP

HACK THE GRID (ISTE)

VISHAAL S
SNEHA V
LIYASNI U S
DHANUSHRI G R

- Successfully organized the Hack the Grid Workshop at Yuktaha ’25 Symposium on 15th March, as a team, ensuring smooth coordination and enthusiastic participation from attendees.
- The workshop focused on Solar PV System Design and key grid-related concepts, providing both conceptual understanding and practical insights into modern energy systems.
- Interactive sessions and collaborative teaching approaches helped participants better understand real-world applications in building a smarter and more resilient energy future.
- With strong teamwork and coordination, the workshop was conducted effectively and received positive feedback from participants.

EVENT

ENERGIA

AMALAN JOSEPH J
VARMA R
LEVIN RICARDO P
MADHIVADHANI K

- Successfully organized ENERGIA, a technical paper presentation event as part of Yukta ’24, conducted on 15th and 16th March.
- Provided a platform for students to present innovative ideas and research work in various domains of engineering.
- Evaluated participants based on technical knowledge, presentation skills, and clarity of concepts.
- Encouraged knowledge sharing, critical thinking, and confidence among participants through interactive sessions.
- The event witnessed active participation and was successfully executed through effective teamwork and coordination.

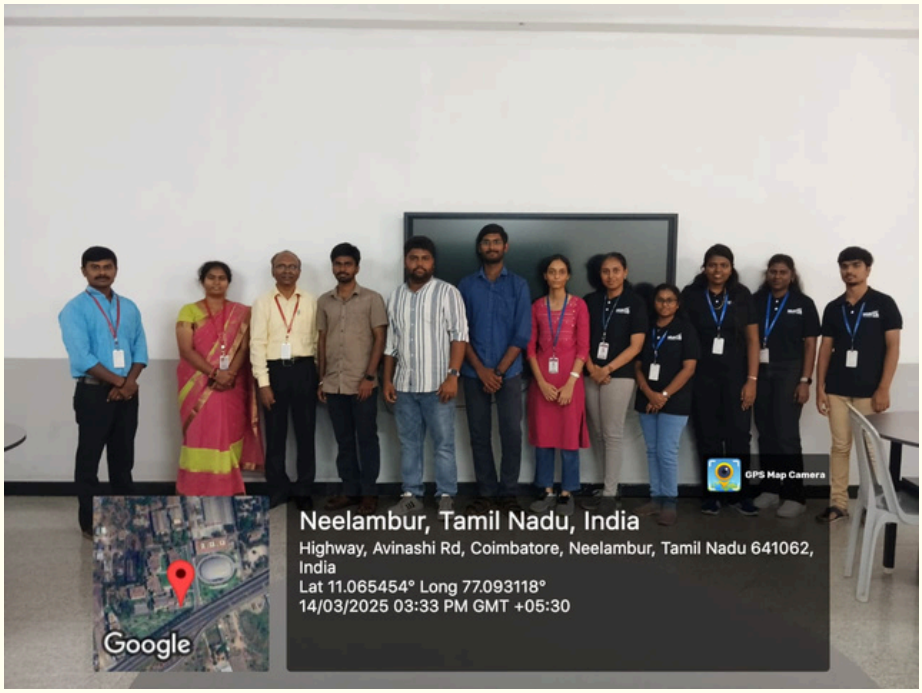
EVENT

ELECTROBUZZ

VISHAAL S
KESAVAN T
DHANUSHRI G R
PRADEEP V
AKSHAYAKANNA S
SARVESAA JAGANATHAN

- Successfully organized Electrobuzz as part of Yukta ’24, delivering an engaging technical event focused on evaluating participants’ core electrical knowledge. The event was structured with multiple rounds designed to test conceptual understanding and problem-solving skills.
- The competition also included hands-on challenges using Arduino, where participants applied their knowledge to build and implement practical solutions in real time. These rounds encouraged innovation, teamwork, and technical creativity.

EVENT



ENERGIA (ISTE)

NARMADA K S
DHAKSHATHA S B
SAVITHAS
UMAMAHESHWARI

- The Energia Intercollegiate Paper Presentation Event, held as part of Yukta Symposium, provided a platform for students to present innovative ideas in various fields of electrical and electronics engineering.
- The event saw active participation from multiple institutions, with students delivering well-structured presentations evaluated on technical content, originality, and clarity.
- Overall, it encouraged knowledge sharing and critical thinking, making it a successful initiative that enhanced participants' confidence and presentation skills.

EVENT

CIRCUITATHON (IEEE)

VARMA R V
NANTHA KUMAR S
KAMALI S

- Successfully organized Circuitathon as part of Yukta ’25, a hands-on technical competition centered on electric circuit design and real-time implementation.
- The event was structured to challenge participants in applying theoretical concepts to practical problem-solving through engaging and innovative tasks.
- Efficient planning, coordination, and evaluation ensured smooth execution, while encouraging participants to showcase their technical skills and creativity.

EVENT

ML ODYSSEY

JEGAN R V
HARINI N
SASTIPRANAV S C

- ML Odyssey is a dynamic technical event that brings together innovation and data-driven thinking. It challenges students to design and develop intelligent machine learning models, applying concepts to solve real-world problems.
- The event encourages creativity, logical thinking, and technical expertise, providing a competitive platform for participants to showcase their skills and explore the potential of modern technologies.

EVENT

PROJECT WAR (IE)

KESAVAN T
SAGHANAA T
DHARSHINI S
THARIKA S

- Project War was one of the most engaging events of the symposium, bringing together students to showcase innovative ideas and project solutions. The event provided a platform for participants to present their work, demonstrating creativity, technical knowledge, and problem-solving skills.
- With enthusiastic participation and effective coordination, the event encouraged healthy competition, teamwork, and knowledge sharing, making it a successful and impactful part of the symposium.

Elevating Academics: Minor & Honors Journeys

CSE MINORS

AMITA ANAND
AMALAN JOSEPH J
ASHAF M
SELVADHARSHINI S
JEGAN R V

- Pursued a Minor Degree in Computer Science with a specialization in Data Science, gaining interdisciplinary knowledge beyond the core engineering curriculum.
- The program covered key areas such as Neural Networks and Deep Learning, Image and Video Analytics, Exploratory Data Analysis (EDA), Text and Speech Analysis, Big Data Analytics, and Recommender Systems.
- This coursework provided a strong foundation in data-driven techniques, enabling the application of analytical and intelligent solutions to real-world problems.

EEE HONORS

KAMALI S
MUGESH G
NANTHA KUMAR S

- Successfully completed the Honors Degree specialization in Electric Vehicle Technology with advanced knowledge in emerging EV systems and applications.
- The specialization included courses such as EV Architecture, Design of Motors and Power Converters for EV, Testing of Electric Vehicles, Grid Integration of Electric Vehicles, Intelligent Control of EV, and Special Electrical Machines.
- The program enhanced students' technical understanding and practical skills in electric mobility, power electronics, and sustainable transportation technologies.

EDITOR'S NOTE

As we present this magazine, we do so with hearts filled with gratitude, memories, and pride. This is more than just a collection of pages — it is a reflection of our journey, the moments we shared, the challenges we overcame, and the memories that shaped us throughout these years.

Every section of this magazine carries a part of our story. From classrooms and laboratories to symposiums, events, placements, friendships, and unforgettable experiences, each memory has contributed to who we are today. This magazine stands as a celebration of our department, our growth, and the bond we built together along the way.

We sincerely thank everyone who contributed to this magazine and made it meaningful with their efforts, experiences, and creativity. Your support, participation, and memories added life to every page and made this work truly special.

To our juniors, we hope this magazine helps you even a tiny bit in your journey. We wish you all the very best for your future, achievements, and dreams ahead. Always remember that you can reach out to us anytime for academic guidance, placement-related help, or support whenever needed. As your seniors, we will always be there for you.

Finally, we express our heartfelt gratitude to our faculty members and mentors for constantly guiding, encouraging, and believing in us throughout our journey. Their support and motivation have played a major role in shaping who we are today.

Warm regards,

Selvadharshini S

Class of 2026

“வினைத்திட்பம் என்பது ஒருவன் மனத்திட்பம்
மற்றைய எல்லாம் பிற.” – திருவள்ளுவர்

“Dream, dream, dream. Dreams transform into thoughts and thoughts result in action.”
– A. P. J. Abdul Kalam
