ACKNOWLEDGEMENT

This magazine is a collective reflection of the journey undertaken by the Batch of 2025. It brings together experiences, milestones, and memories that mark our time in the Electrical and Electronics Engineering Department. Its completion would not have been possible without the guidance, support, and contributions of many individuals to whom we are deeply grateful.

We extend our sincere gratitude to the **Head of the Department**, **Dr. C S SUBASH KUMAR**, for the guidance and encouragement that made this magazine possible.

Our heartfelt thanks to the **faculty and staff** of the Electrical and Electronics Engineering Department for their continuous support, both during our academic journey and throughout the creation of this publication.

We are especially thankful to **Dr. VASU**, our **Dean** and **former HoD**, and to our **tutors**, for their consistent mentorship and presence.

We also acknowledge the contributions of our **fellow classmates** from the Class of 2025, whose enthusiasm, inputs, and teamwork brought this magazine to life.

Finally, to our **juniors** - this magazine was curated with you in mind. We hope it serves as a meaningful guide and a source of inspiration.

DEAN'S MESSAGE

It feels like just yesterday you walked into the department, bright-eyed and eager, embarking on a journey that has now culminated in this significant milestone: your graduation. As your Head of Department during your first three years, and more personally, as one of your instructors, I am happy to have witnessed your transformation from aspiring students into competent, confident engineers ready to make your mark on the world.

Over these past few years, we have shared countless hours in classrooms and lab classes, grappling with complex concepts. I recall vividly our sessions in Engineering Circuit Analysis, where we laid the fundamental groundwork of electrical engineering. We navigated through complex numbers (that weren't complex) or imaginary numbers (that weren't imaginary), phasors, Kirchhoff's laws, deciphered transient responses, and demystified AC circuits, building the analytical skills that are the bedrock of our discipline. I always loved demonstrating complex exponentials! Can you recall the discussion on partial fraction expansion of the transfer function with repeated roots, and the round-about way in which I calculated the current in a mesh when one of you showed that the path was a short-circuit (with a single current source), and no such calculation was required (in reciprocity theorem)! Remember, we had a digital multifunction meter installed in the classroom when we were discussing electric circuits!

But perhaps I remember most are our deep dives into C Programming and Data Structures. I remember the initial apprehension many of you felt when faced with the intricacies of coding, but it was a challenge we tackled together with enthusiasm. We didn't just learn syntax; we went beyond that. I took particular delight in showing you the hidden mechanics of your programs. We utilized animation videos to visualize the flow of execution. Remember why we used Neso Academy videos and not those of Jenny's! We spent hours with debuggers, peering into the very heart of your programs, observing how variables changed and how data structures were built, byte by byte. It was the first time I taught C Programming and Data Structures in a classroom!

Do you remember those fascinating discussions about little-endian and big-endian storage, understanding how different systems interpret the order of bytes in memory? And the detail we went into regarding the IEEE format for floating-point numbers, revealing the precise way computers represent real numbers. These weren't just abstract concepts; they were crucial insights into the very fabric of digital systems, empowering you to write more efficient, robust, and error-aware code. My hope was that by lifting the curtain on these low-level details, you would gain a profound appreciation for the elegance and complexity of computer architecture.

Your education in Electrical and Electronics Engineering has equipped you with a unique blend of hardware and software expertise, a powerful combination that is more relevant now than ever before. You are entering a world brimming with technological possibilities, from AI and IoT to renewable energy and advanced communication systems. The analytical thinking, problem-solving skills, and innovative spirit you've cultivated here will be your greatest assets.
As you step out, remember that learning is a lifelong process. Embrace challenges, stay curious, and never stop seeking knowledge. Uphold the highest ethical standards in your work, and always strive to use your engineering prowess for the betterment of society. You are not just engineers; you are innovators, problem-solvers, and future leaders.

March forward, my dear students, and illuminate the world with your brilliance. The entire department is incredibly proud of each one of you. We look forward to hearing about your successes and the incredible contributions you will undoubtedly make. Our doors will always be open.
With warmest regards and best wishes for a magnificent future!

-Dr. Vasu C L
Dean Academics

HOD'S MESSAGE

It gives me immense pleasure to be head of intellectuals in the Department of Electrical and Electronics Engineering. Our department is always in the forefront, and we have a dedicated team of faculty members working tirelessly to ensure that all our students are well qualified engineers serving the society and the industry. The path for success is being planned meticulously in our department and our students shine in both academics and extracurricular activities.

This magazine "EEE Chronicles – 2025" is a collection of all your hard work and memories of 2021-25 batch of students. This graduating batch has excelled in academics, sports, technical competitions and various clubs and had brought laurels to our department and college. The magazine shares the experience of all individual students during their journey at PSGiTech and their experience at interviews and their journey towards higher studies. Hope this magazine will be of great help to all the juniors in preparing for their journey ahead.

On behalf of our EEE family we wish you all success in all your endeavours.

- Dr. C S SUBASH KUMAR
Head of the Department

ABOUT THE DEPARTMENT

Department of Electrical and Electronics Engineering: Empowering Future Technocrats

Established in 2014, the Department of Electrical and Electronics Engineering offers a comprehensive Bachelor of Engineering program designed to equip students with the skills necessary to excel as successful technocrats. The department's mission is centered around fostering a community of innovative engineers who contribute meaningfully to societal progress.

Faculty Expertise and Research

The faculty comprises specialists in key areas such as Power Systems, Electrical Machines, Power Electronics, Control Engineering, and Embedded Systems. Many senior faculty members hold Ph.D. degrees, while others are actively engaged in research, ensuring a dynamic academic environment. The blend of academic rigor and industry experience among faculty members provides students with a well-rounded educational experience.

Industry Partnerships and Centres of Excellence

To enhance learning and research opportunities, the department has established Centres of Excellence and forged strategic partnerships with industry leaders through Memoranda of Understanding (MoUs). These collaborations facilitate interactions between students, faculty, and industry experts, fostering a culture of innovation and practical application.

Student Achievements and Placements

Students, under the guidance of experienced faculty, engage in project-based learning to gain hands-on experience. This approach has yielded impressive results, with students winning numerous national competitions. Notably, the 2014-18 batch secured 8 university ranks as per Anna University's rankings. The department boasts a strong placement record, with graduates employed by reputable companies and others pursuing advanced studies both domestically and internationally.

Alumni Engagement and Laboratory Facilities

The department encourages interaction between alumni and current students, providing valuable industry insights and networking opportunities. Furthermore, it is equipped with state-of-the-art laboratories in areas such as Engineering Practices, Devices and Circuits, Electrical Machines, Power Electronics, Power Systems, Control and Instrumentation, Analog and Digital Electronics, Microprocessors and Microcontrollers, Embedded Systems, Industrial Automation, and Control and Robotics. These facilities ensure that students receive comprehensive training in both theoretical and practical aspects of electrical and electronics engineering.

VISION

To create a dynamic community of aspiring technologists in the field of Electrical and Electronics Engineering, by empowering our students with the skills and knowledge to confidently tackle global challenges in an ethical manner.

MISSION

- Pursue excellence in education and research and produce globally competent electrical engineers, who will contribute to a sustainable and prosperous world
- Promote multi-disciplinary and self-learning activities through project work
- Foster research, innovation and industry-institute collaboration

PROGRAM OUTCOMES

On completion of Electrical and Electronics Engineering program, the student will have the following Program Specific Outcomes.

- **Foundation of Electrical Engineering:** Ability to understand the principles and working of electrical components, circuits, systems and control that are forming a part of power generation, transmission, distribution, utilization, conservation and energy saving. Students can assess the power management, auditing, crisis and energy saving aspects.
- **Foundation of Mathematical Concepts:** Ability to apply mathematical methodologies to solve problems related with electrical engineering using appropriate engineering tools and algorithms.
- **Computing and Research Ability:** Ability to use knowledge in various domains to identify research gaps and hence to provide solution which leads to new ideas and innovations.

From the Tutor's Desk

Dear all,

I find myself filled with both gratitude and pride as you guys are my second batch (2021-2025) as a tutor.

It has been an absolute privilege to walk a part of the path with you where I can learn things from you guys (real experiences) and make yourself to learn and understand good & right things.

Enjoy your World! You guys are The King and The Queen of your own world !!

As you guys start a new beginning of personal and professional life, I wish you guys to carry forward the moral lessons, the laughter, the friendships, humility, hunger for learning and the resilience you have built. Wishing you all success & joy, and hold a Prosperous Life Forever.

Everything is possible to a willing heart

With love,

Dr. Jeyashree Arthanareeswaran

JUST A LITTLE NOTE FROM

As you prepare to begin a new chapter in your lives, I want to take a moment to reflect on the journey we have shared. Teaching this class has been much more than delivering lessons, it has been a rewarding experience, watching each of you grow, support one another, and overcome challenges together.

I have seen you come together during project deadlines, helping each other solve problems, sharing resources, and staying motivated. During exams, you formed study groups and ensured no one was left behind. When placement season arrived, you celebrated every success and patiently stood by those still waiting , showing true empathy.

What impressed me the most was how you celebrated each other's achievements without envy and quietly supported one another during difficult times. You have set a high standard for the juniors to follow. Your dedication and teamwork have created a culture of excellence and support that will inspire those who come after you.

Though you move on from this classroom, you will always remain a valued part of this family. I am proud to have been part of your journey and look forward to seeing all that you will accomplish.

எண்ணித் துணிக கருமம் துணிந்தபின்
எண்ணுவம் என்பது இழுக்கு.

MR.S.RAVIKRISHNA

A NOTE FROM

Ms.DIVYA R

Dear Students,

As you prepare to turn the page, we honor the experiences, growth, and milestones of the 2021–2025 batch. It has been a journey filled with learning, transformation, resilience, and countless memories that will remain etched in the hearts of everyone who walked this path with you.

This batch stands out for many reasons — your unwavering spirit during uncertain times, your adaptability in navigating hybrid classrooms, and the strong sense of community you built among yourselves. From the excitement of first-year orientations to the final-year project presentations, each moment has contributed to the vibrant legacy you leave behind.

Your achievements, especially in placements, speak volumes of your dedication, skill, and preparation.

But beyond the grades, the internships, and the interviews, what we'll remember most is your energy — the laughter in the corridors, the ideas that sparked in classrooms, the events you organized, and the bonds you created. You brought life to these walls, and now you carry a part of this institution with you as you move forward.

You leave behind an inspiring track record of placements across diverse domains, industries, and roles. But more importantly, you leave behind a legacy of resilience, collaboration, and forward-thinking that will guide future batches.

As you step into the next chapter of your lives, we hope you carry with you not just knowledge and skills, but also the relationships, values, and experiences that shaped you here. Continue to learn, lead, and inspire — just as you did during your time with us.

from the

Class of 2025

As we close this chapter of our lives, we find ourselves looking back—not with grand speeches or big words, but with quiet gratitude.

These four years have shaped us in ways we didn't always notice at the time. In the rush of assignments, lab work, events, and late-night preparations, something steady was unfolding—we were growing. Not just as students, but as individuals learning to think, to question, to try, to fail, and to rise again.

We didn't do it alone. Behind us stood the support of our department—our professors, mentors, lab staff, and everyone who helped us find our ground. They guided with patience, taught with clarity, and always reminded us that we were capable, even when we weren't so sure.

Looking back now, it's not just the lessons or grades we carry—it's the people, the moments, and the quiet encouragement that made a difference.

This magazine is one way we've chosen to give back—to leave behind something thoughtful and honest. It's not just a reflection of what we did, but a small collection of what we learned along the way. We hope it becomes a helpful companion for those who come after us.

To our juniors—this comes with warmth and trust. May it help you in your journey, even in small ways. And if ever you find yourself in need of clarity or guidance, feel free to reach out to us. We'd be happy to share what we can—because if something we learned the hard way can make your path easier, that's more than worth it.

We carry this place with us—not just as students passing through, but as individuals shaped by every moment we spent here. This is, and always will be, home in its own way.

With respect, gratitude, and love,
The Class of 2025

RECRUITMENT PROCESS :

OVERVIEW :

1) OPTING IN
2) ROUND1 : Technical and Gamified Assessment (Online)
3) ROUND 2 : Technical Interview (Hybrid)
4) ROUND 3 : HR Interview (Hybrid)

1) OPTING IN : (17th July – 25th July, 2024)

- While opting in we have to give our preference of job role.
- They offered four roles : EA (Electrical & Automation), R&D (Research and Development), SD (Schneider Digital) and IO.
- Based on this preference, the interview panel would be divided in the second round if shortlisted.
- My first preference was R&D and was allocated the same. Sometimes the next preference in order may also come into play.

2) ROUND 1 : (31st July 2024)

***SECTION 1 :* Technical Assessment**

- DOMAINS : Before starting, one of the three domains – Electrical, Electronics, Software has to be chosen and the questions will be based on that. I Chose Electronics.
- TYPE : MCQ (All the questions were listed at once. Hence, can scroll back and forth between questions).
- No. Of Questions : 30
- DURATION : 30 Minutes
- Areas Tested (For Electronics) : Electronic Devices, EMI, Network Analysis and Synthesis, Microprocessor & Microcontrollers, Digital Electronics, Digital Signal Processing, Control systems and Communication Engineering.
- 75% of the questions were easy to medium numerical problems and the rest theoretical questions.
- My questions were based on Circuit reduction, logic gates, Boolean algebra, Diodes and their characteristics, Convolution theorem, Signal to Noise Ratio, Bandwidth calculation etc.
- A review of all the basic concepts, facts, definitions and formulas from respective subjects and a bit of basic problem solving is much sufficient to clear this round easily.
- No negative marking

SECTION 2 : Gamified Assessment

- TYPE : Games
- PLATFORM : AON
- No of Questions : Unlimited.
- DURATION : Varies for each game. Usually between 30-60 seconds.
- Areas Tested : Verbal, Logical, Reasoning, Vocabulary, Memory, Psychometric and

Behavioural testing.

- The goal is to attend maximum number of questions rightly possible in the given time. Few

questions have negative marking.

- For each game a trial was given, that could be tried any number of times. The questions were

not typical Aptitude problems. Sample problems could be found in the below link (Prepare for an Online Assessment)

- Behavioural test at last has almost 100 statements on which you have to express your

agreement, disagreement or neutrality. Being honest with the answers is beneficial and if the

answers are not sure giving neutral would be better.

- Though the task has no time limit, patience, focus, concentration and a calm surrounding is

important.

- This gamified assessment helps boost the score.

Results of the 1st Round were announced on 3rd August and I got shortlisted for R&D role. My interview was scheduled on 8th August 10:30 Am and it was virtual. On the same day the Pre Placement Talk was held in physical mode at PSG Tech. The PPT ended by 10:20 Am and in the next 10 mins my interview was. Though the PPT was going on, those who had virtual interviews by 10:00 Am and all were attending. So make sure you join on time for the virtual interviews no matter what.

3) ROUND 2 : TECHNICAL INTERVIEW (8th August 2024)

TYPE : Hybrid. For me it was virtual.
PLATFORM : Microsoft Teams. Ensure good connectivity, audio and video quality.
DURATION : 30 Minutes
The interview started and ended on time. Since the interviewer had already gone through my resume, he asked me to tell about myself that was not mentioned in the resume. Then the conversation continued focusing on projects and co-curricular activities. A few questions were :

• Tell about the competition (eBaja)
• Project explanation and follow up questions
• What do you think is the role of mentors or professors in student’s projects
• Explain about the PLC workshop you conducted

• Basic Questions on PLC
• About the board of study, scoring system, my rank in the entire class etc.
• What would you do if you don't get a job at all
• The interview concluded after I asked my question.

Since it was a virtual interview, the schedule with the interviewer was given two days before.

Hence got to know about him through LinkedIn and prepared on topics that matched with his
areas of work. Questions were also related to that.

Being open, confident and clear about what I said made the process comfortable and likable.

What you answer decides the next question to be put forth. It will help us have control over
the conversation and take in a direction we desire.

Few of them had the HR round on the same day after shortlisting. While for me, the results of round 2 came the next afternoon. It was like the longest wait. The HR interview was scheduled on the same day night 08:15 PM.

4) ROUND 3 : HR INTERVIEW (9th August)

MODE : Hybrid. It was virtual for me.
PLATFORM : Microsoft Teams
DURATION : 15 Minutes

It was a very gradual conversation. Self-Introduction was not asked. Few Questions were

• Did you ask questions in Technical Interview
• About family background and few follow up questions
• What business would you start the next day itself if I deposit 5 crores in your account.
• What do you see as the challenges of relocation

They wish to see if you can act spontaneously and express yourself without any hesitation and confusion.

The interview ended on a positive note with an opportunity to ask a question.

The results came the next day and I was offered Intern + Full Time in R&D.

" The Universe always stays in love with a stubborn heart "

If you want it, just go for it and put in everything you can, without expecting the results. It will be paid back in the best way you least expected !

Best Wishes to whoever is reading it and feel free to contact !

ABHINESH S R
HL Mando Anand India PVT Ltd.
Chennai

9345600978
ramabhinesh33@gmail.com
Abhinesh S R - linkedin

ROLE: Graduate Engineer Trainee (GET)

COMPANY OVERVIEW:
HL Mando Anand India Pvt Ltd is a joint venture between HL Mando Corporation of South Korea and the ANAND Group of India. Established in 1997, the company specializes in designing and manufacturing steering, suspension, and brake systems. HL Mando India offers advanced hydraulic brakes, shock absorbers, and struts for cars and SUVs. The company has three state-of-the art sites near Chennai, India. It operates on core pillars of unity, innovation, and transparency. HL Mando India focuses on developing next-generation technology. The company aims to enhance driving safety and comfort.

ROUND 1: General Aptitude Assessment
Date: 10/12/2024
Time: 4:00PM to 8:00PM
Duration: 45 Minutes
Venue: Any location
Mode: Online Mode

Questions were from the topics (Percentages, Ratio & Proportion, Data interpretation, Number series, Time-Speed-Distance)

ROUND 2: **Critical thinking and Domain Assessment**
Candidates are assessed on critical thinking skills, evaluating their ability to analyze complex problems and make logical decisions. Domain assessment also plays a crucial role, testing candidates' technical knowledge and expertise in their relevant field.

Date: 12/12/2024
Time: 4:00PM to 8:00PM
Duration: 70 Minutes
Venue: Any location
Mode: Online Mode

Domain questions were from core subjects like Power Electronics, Electrical Machines, Protection and switch gear. & for critical thinking, Questions includes decision making scenarios, logical reasoning, situational judgement problems.

ROUND 3: Psychometric Test

Psychometric test assesses candidates' behavioral traits, personality, and cognitive abilities to evaluate their fit for the role and company culture. It helps identify strengths and potential areas for growth.

Date: 14/12/2024
Time: 4:00PPM to 8:00PM
Duration: 70 Minutes
Venue: Any location
Mode: Online Mode

ROUND 4: Technical and HR Interview

The students who cleared all the above rounds were shortlisted for the final interview process. In this round both technical and HR questions were asked (one technical interviewer and two HRs were there).
First, they asked me to introduce myself and questions like

HR's Questions:

- Family Background
- About Schooling
- Why did you choose EEE?
- Which department do you like to work in our company (Production, Manufacturing, R&D, Sales and marketing)?
- Are you comfortable with rotational shifts?
- comfortable in any location?
- Ready to sign the bond for 5 years? (there is no bond in this company)

Technical Questions:

- Working principles of dc generator and alternator and its difference?
- Basic Power System and Electrical Machines based questions.
- What is corona discharge and its effects on line?
- What is skin effect and its causes?
- Explain the working principle of diode and its application?
- Kirchoff's voltage and current law?
- Why did u choose this project?
- Project related questions
- How does an AC Induction Motor work?
- As a Electrical engineer which field u are willing to work? (Ex: substation side , Ev's side etc..)
- Any questions do u have to ask with us?

The results were announced **on 5th Feb 2025, and I got Selected!**

TIPS:

- For aptitude round, practice in **IndiaBIX platform**.
- For psychometric round, **be honest and choose the answer**. Many questions were repeated in different ways but have the same meaning to test our honesty.
- Update Your resume related to the company.
- Be strong in basics of electrical subjects (mainly in Electrical machines, Protection and switch gear)
- For technical interviews, **try to answer all the questions** without saying I don't know (they will notice your managing skill).
- Mostly try to ask questions at the end of technical interview.

"MAJA AAGAYA"

ABI P

9345753875

abibabu7373@gmail.com

Abi P - linkedin

Over the past four years, I've had a chance to learn, explore, and grow both technically and personally. I currently have a CGPA of 7.87 up to my seventh semester. I completed my higher secondary education under the State Board of Tamil Nadu in 2021 with a commendable 88.07%, following Secondary education with 83.06% in 2019. Dedicated, creative, and eager to acquire new skills, I am committed to contributing meaningfully to growth and technical innovation.

From the beginning, I was interested in subjects like Digital Electronics, Artificial Intelligence and Machine Learning. I enjoy programming in Python and C, and I've used tools like MATLAB, Zelio, and Etap for simulations and project work.

Some of the projects I worked on include An Autonomous Robot using Arduino and sensors that could detect lines and move on its own, A Smart Health Guardian to monitor heart rate, blood pressure, and temperature using wearable sensors and A Smart Irrigation System using a solar-powered BLDC motor to support eco-friendly farming.

Along with academics, I also took part in co-curricular activities. I'm a member of Tamil Mandram and NSS, and I've helped organize events like YUKTA 2023 and iTech Expo. I've also enjoyed playing sports — one of my favorite memories was winning the Throwball Tournament at CIT in 2021. I was the school topper in both 10th and 12th grades, and I've won prizes in district-level essay competitions and a project expo held at PSG iTech.

Looking back, this journey has taught me a lot — not just about circuits and code, but also about teamwork, time management, and staying motivated. I'm excited to keep learning and hope to contribute to meaningful work in the future.

ABOUT THE COMPANY:

Altair Engineering is an American multinational technology company specializing in software and cloud solutions for Simulation, IoT, High-Performance Computing (HPC), Data Analytics, Digital Twin Development and Artificial Intelligence (AI). Recently, Siemens acquired Altair for $10.6 billion, integrating its technology into the Siemens-Xcelerator Platform to create a more comprehensive AI-powered industrial software portfolio.

SELECTION PROCESS:

Altair Engineering shortlisted candidates for interviews based directly on **academic performance (CGPA) and resume screening.** I was among the shortlisted EEE students due to a strong CGPA and relevant project experience in power electronics and simulation.

INTERVIEW:

Panel Structure:

- The interview was conducted by a **panel of 4 members** from the **Product Design and Development Team.**
- The panel included Senior Engineers and a Manager who each focused on different aspects like technical knowledge, design skills, and team fit.

1. Technical + HR Combined Interview

- The session began with a prompt to introduce myself, where I briefly covered:
- My Academic Background.
- Interest in Electrical Machines, Analog and Digital Electronics and Electric Vehicles.
- My Implant Training which I had undergone in a Motor Company.
- The Online Courses I have done during my academic year.
- Key projects including Mini-projects, Software and Hardware projects.
- Software tools I had worked with (like MATLAB-Simulink/Simscape, PSpice, LTSpice, NI Multisim, MotorXP, E-TAP, etc.)

2.Technical Discussion

The technical part of the interview was quite broad and in-depth. Questions came from several core EEE domains, including:

Power Electronics

- Working principles of buck, boost, and buck-boost converters
- Comparison between MOSFETs and IGBTs
- Losses in converters (switching C conduction), Efficiency calculation
- Real-world design issues: thermal management, EMI/EMC in circuits and component selection

Electrical Machines

- Types of motors used in EVs, the mostly used motor and why is it used?
- Working and characteristics of Induction, DC vs BLDC, PMSM, SRM, SynRM motors and drive circuits
- How machine types affect EV drive design
- Torque-speed characteristics and selection criteria for applications

Analog and Digital Electronics

- Op-amp-based signal conditioning
- ADC/DAC interfacing in embedded systems
- Logic circuit design questions

Electric Vehicles

- Powertrain architecture and control strategies
- Battery management basics (SoC, SoH, Battery charge vs Vehicle Range, Active and Passive Charging…)
- · Regenerative braking and Inverter selection in EVs
- · EV Speed, Range Calculations for different vehicles and Transmission System
- Architecture

Project-Based Questions

I was asked to explain all major academic projects I had done:

- The interviewer was interested in my design approach, testing process, simulation models, and challenges faced
- Questions were asked on how I validated my results the tools/methods used in the project
- Enquired about the components and Processor/Controllers used
- Reason for choosing the specific controller and sensors and their working
- Close-loop feedback and the sensors, methods and control strategies used for the feedback
- Applications and novelty of the project

3. Managerial and Behavioural Questions

Toward the end, the panel assessed my teamwork, learning attitude, and communication:

- Have you worked on group projects? What role did you play?
- Are you open to learning new domains and tools outside your coursework?
- Tell us about a time you faced a technical challenge. How did you approach it?
- Where do you see yourself in the next 3-5 years?

- How does this role align with your career aspirations?
- Why do you want to work at Altair Engineering?
- What are your strengths and weaknesses?

They also gave a brief overview of the projects and expectations within the Product Design and Development team — emphasizing design, simulation, and real-world validation of Electrical, Electronic and Mechanical systems.

OFFER AND ROLE RESPONSIBILITIES:
After the interview, I received the offer within a few days. My role as a Power Electronics Engineer involves:

- Designing and simulating converter and motor drive systems
- Using Altair's platforms for system modelling and optimization
- Supporting cross-functional product development workflows
- Engaging in real-world EV, industrial, or renewable energy projects

Tips for Future Applicants:

- Be strong in fundamentals across multiple domains: Power Electronics, Machines, Analog/Digital Electronics, Microprocessor and Microcontrollers, Sensors and Actuators and EV systems
- Prepare to explain your projects in depth — what you built, how it worked, what tools you used, and what you learned
- Brush up on simulation tools and basic design software
- Structure your self-introduction to make a strong, confident start
- Show curiosity, practical understanding, and a strong willingness to learn

OFFER AND ROLE:
I received the offer within a week of the interview. The role strongly aligns with my Electrical and Electronics Engineering background and my keen interest in electrical machines, electronics and product design.

Wishing all students heading into placements the very best! Stay confident, believe in your preparation, focus on your fundamentals, stay calm during interviews, and don't be afraid to express your genuine interest in the role. Every opportunity is a chance to learn and grow — trust the process, and success will follow.

You're going to do great!

ADHARSHA R
EMR Tap Changers Pvt Ltd
Chennai

7904401544
adharsha2319@gmail.com
Adharsha R -linkedin

RECRUITMENT PROCESS :

ABOUT THE COMPANY:

EMR Tap Changers Private Limited (EMR) is an electromechanical company that manufactures tap changers and accessories for transformers in India. They Design, manufacture, and supply on-load tap changers (OLTCs) and small breathers for industries.

NO OF ROUNDS: 2

Round 1: Technical

Round 2: Technical + HR

There was no online test held, the HR directly contacted the shortlisted students for the interview. Shortlisting was done based on the CGPA above 8. Both the rounds were online.

Round 1(Technical):

Round 1 was held on 18th of January through phone call. The interviewer went through my resume then he explained about the role their hiring for and also he gave an overview of the company Since my Areas of Interest was Electrical Machines, Protection and Switchgear and the company also design, manufacture tapings, breathers for transformers he begin to ask questions based on transformer mainly he focused on breather part of the transformer.

1. What are the parts in a transformer?
2. Explain about electrical and mechanical parts in a transformer?
3. Why insulations are used in the transformer?
4. Do you know about conservator and breather?
5. What does breather do?
6. Why moisture in the air must not enter into conservator tank?
7. What will happen if it enters into the conservator tank?
8. What are the components present in the breather?
9. What is the colour of the silica gel and after absorbing the moisture what will be the colour of the gel?
10. What should be done to make the silica gel come to its original colour after absorbing the moisture?

The interview was held for about 20 mins. He finally asked me whether I am ok with the role and whether I am ready to learn AUTOCAD, SOLID WORKS software.

TIPS: Be confident while answering your question and don't give one-word answers. Be thorough on your Areas of Interest. If you don't know answers to any of the questions don't say you don't know about it instead try to interconnect what you have learned, the interviewer does not expect exact answers from you they just want to know whether you are able to try answering it.

Round 2(Technical + HR):

Round 2 was held on 20th of January through video call it was about 20 minutes. The interviewer asked me where do I come from and to give a brief introduction about myself. Then he went through my resume and started to ask questions from one of my project.

1. Explain your project briefly
2. What is your battery rating?
3. What is the size of the solar panel you used, how many cells are there in your solar panel?
4. What is the rating of the solar panel and how much voltage is generated from the solar panel?
5. Which converter you have used, Why did you choose that converter?
6. How much current flows from the converter to the battery?

Then he asked me whether I know about series and parallel circuits and began to ask questions from that.

1. What will happen to current and voltage when it is connected in series and parallel
2. He gave a problem to solve, when 3 lamps are connected in parallel with each lamp of 50V capacity and 150W power this power is applicable to the whole circuit what will be current through each lamp?
3. Calculate the power consumed by each lamp when the calculated current flows through it.
4. Will the lamp will glow brighter or not?
5. He asked me whether my home is 1 phase line or 3 phase line, what is the voltage?
6. What is the relationship between phase voltage and line voltage what is the equation?

Then he asked me whether I am ready to relocate to Chennai and will I be there even after getting married.

TIPS: If the interviewer ask you whether you have an idea of writing government exams or any higher studies plan be careful while answering and tell them you are not interested even if you have any idea of doing those.

I received mail within an hour that I have been selected.

Feel free to contact me if you have any quieries. Be thorough with your resume and basic knowledge about electrical fundamentals.

ALL THE BEST !!!!

ADITYA PERUMAL E

Chennai

9952816280
adityaperumal13@gmail.com
Aditya Perumal E - linkedin

27th July 2024 – Saturday

The first round was held at PSG iTECH CSE Ground Floor Lab @9:30 AM.
First round had **4 sections**.
SECTION 1: Quantitative Aptitude – 12 questions – 15 mins
SECTION 2: Logical Reasoning – 12 questions – 15 mins
SECTION 3: English and Data Interpretation – 12 questions – 15 mins
SECTION 4: Technical Questions – 40 Questions – 50 mins

- **Quants section** involves topics from Time and Work, Time-speed-distance, Trains, boats upstream downstream, Probability, Permutation and Combination, Profit and Loss, Simple Interest, Compound Interest and Number System.
- **Logical reasoning** involves topics from Syllogism, Blood Relations, Directions, Data sufficiency.
- **English and Data Interpretation** section involves questions from Reading Comprehension, Bar Charts, Pie Charts, Synonyms and antonyms.

(Have basic understanding of the above topics and practice regularly to crack the aptitude section. The difficulty level for aptitude in caterpillar will be from easy to intermediate level
Resources: Carreride YouTube channel, Feel free to learn YT Channel, RS Agarwal book from Library)

Section 4 had **technical questions** which involves topic from C Programming (Code Snippets will be provided and asked to find the output or find the error questions will be asked), Circuit Theory, Digital Electronics,Control Systems(Stability criteria, Poles, Zeroes, Routh Hurwitz, Root Locus, Bode Plot),Embedded systems, MPMC, Analog Electronics(Basics),Electrical Machines(Basics).

- You must have a proper understanding of basic topics from the core Subjects you have learned so far.
- For C programming Byts Karthik sir classes and notes will be more than enough, do not skip those classes.

The results of the first round were announced on 1st August 2023 - Thursday @8:30 PM. Fortunately my name was on the shortlisted lot! The next round was scheduled on 6th August 2024 – Tuesday @8:30 AM.

6TH August 2024 – Tuesday

Pre-Placement Talk was held between 9:00 - 10:00 AM.The next round was scheduled as General Discussion(GD) @11:00AM.There were 9 students (6 PSGiTECH students+3 PSG TECH students)in my GD panel which was judged by two panel members.There were two topics given in GD and it was made to choose by ourself,and it was a kind of kickstart GD(no preparation time was given).

Impact of mobile gaming in youth (or) Topic related to cybersecurity were the topics given to choose. Anyone was asked to start the GD and I started the GD as a second person and spoke 3-4 valid points and everyone was asked to conclude the GD. The GD went for around 15 mins and we engaged the panel with a lot of questions to panel judges at the end of GD. The results were announced within 30 mins and 4 students were selected from our panel and all the students belonged to PSG iTECH. Our panel interview was scheduled at 12:30PM,but it was later postponed to 2:30 PM and I was called onto the interview room by 2:30 PM but my interview started by 3:45 PM.The interview was for 25 mins and ended by 4:10PM. On entering the room I was asked about my family as an icebreaker question ,after which the asked about my introduction.I was able to convey my self-intro with sheer confidence with a smile in my face.By the time I was saying about myself they glanced my resume and immediately after myself into they jumped into my project they found interesting that is E-BAJA Project.

1. How do you choose Battery and motor for your vehicle?
2. Explain the total HIGH VOLTAGE of your vehicle with a block diagram.(This was asked because I mentioned I was leading the HV system of the vehicle)
3. How do you see yourself as a person
4. What is the cross-sectional area of the HV wire you used for transmission,Diameter of the wire and length of the vehicle used
5. Questions related to fuse calculations,BLDC and PMSM motor
6. Mechanical aspect of the vehicle-Basics of Chassis,Suspension,Brakes
7. What are the 3D modeling tools you know ?
8. How will you react if you are overloaded with a lot of work?
9. What do your staff think about you?
10. How will you react to any negative comments from your professors?
11. Any particular advice given from your faculty to you.

In between I explained how this project had given me a lot of insights **both in life personally and academically .** I explained about the whole competition and **what difficulties we face through 2 years of the project** and **how we came to a solution**. Being the **Racing Engineer(DRIVER)** how it enhanced **my problem solving skills** and helped to get a clear understanding in mechanical concepts .Basic things to keep in mind :

- Have a proper outlook,positive attitude,gentle smile with confidence.Confidence is the key even if you are not,pretend that you are !
- You have to be thorough in all the things happened in your project,it is better if you remember like a story (Objective,stages,difficulties faced,solution and result)
- For HR questions being diplomatic is important but being honest to your answers will impress the panel
- Areas of interest must align with the company.
- Talk about your part especially when you are a part of group projects.

The results were announced that evening at 6:15 PM, fortunately I was offered with Inter+FT role !

PROCESS IS MORE IMPORTANT THAN RESULTS!!!
FAITH CAN MOVE MOUNTAINS BUT DOUBT CAN CREATE THEM!!!
EMBRACE UNCERTAINTY

AISWARYA B
Schneider Electric
BGRT - Whitefield, Bengaluru

9345427217
aiswaryabv20@gmail.com
Aiswarya B - linkedin

Schneider Electric offered seven roles and they were Research and Development(R&D), Schneider Digital(SD), International Operations(IO), Electrical and Automation(E&A),Governance, Global Supply Chain(GSC),Cyber Security, Commercial.
We were asked to provide four interested profiles in order of preference. We would be assigned one of those profiles if selected.

Rounds:

1. Online test
2. Technical interview(physical or virtual)
3. HR(physical or virtual)

Round 1 – Online test (30.07.2024)

Module 1: Domain MCQ Test

This module contains 30 questions which is to be completed in 30 minutes and has no negative marking. We had options to choose any one domain from electrical, electronics, computer etc. I chose Electronics and questions were from Circuit Theory, Analog electronics, Digital electronics,
Microprocessors and Microcontrollers, Digital Signal Processing

Module 2: Gamified & Adept test

1. Five cognitive instruments (4-6 minutes each) -30 minutes
   - Numerical Reasoning
   - Language skills (spell check, synonyms, fill in the blanks type)
   - Gap challenge
   - Motion Challenge

Note: Answer as many questions correctly as possible within the time limit.

2. Behavioural test - Untimed

This section had 100 questions .Take time to answer each and every question that are situation based and select the correct option that best finds you. After the screening test, I got shortlisted for the interview and assigned to R&D role.

Round 2: Technical Interview (08.08.2024)

I had physical interview and there were two interviewers in my panel. The interviewer began by asking Self-intro and followed by questions such as

1. What is fault?
2. Reasons for short circuiting in overhead lines

3.Draw a circuit and explain what would happen during short circuit
4.Is your home having single or three phase connection (There was a brief discussion on the electrical connections in my home).
5. Difference between Circuit breaker and fuse
6. Types of circuit breaker
7. Explain any one project (some question related to the project was asked)
8. How do you want to see yourself in five years?

Also different scenarios were given to answer technical questions. Hence sound knowledge of basics is necessary.

Note: Be prepared to answer questions that you didn't list as AOI in your resume. Because it depends on the panel members.

Round 3: HR interview (09.08.2024)
I was selected for HR round and it was on virtual mode (Microsoft Teams). I had questions like

1. How was my interview?
2. What kind of Start-up Company you would bring up and why?
3. How was my hostel experience?
4. Do you have any questions for me?

The results were out the very next day. I was offered an internship cum Full time role in Schneider Electric.

ALL THE BEST !

ananthik2982003@gmail.com
Ananthi K - linkedin

30th July 2024 – Tuesday

ROUND 1 - ONLINE TEST
The first round was held at PSG iTECH CSE Ground Floor Lab @10:30 AM. First round had 2 sections.

SECTION 1: Domain Test
The test was conducted on the Cocubes platform. You can choose any one section from Electrical, Electronics and Software. You can also choose roles like Electrical and Automation, Research and Development, Software Developer and Global Supply Chain. I chose the Electrical Section and R&D role. This section consisted of questions from Digital Electronics, Microcontrollers, Control Systems and Electrical Machines. The duration was 30 questions in 30 minutes (no negative marking).

SECTION 2: Gamified Test

- The test will be conducted on the AON platform. The test consisted of verbal ability, puzzle solving, memory games each for about 10-15 mins. This section had negative marking. There is no limit on the number of questions. Attempt as many questions as you can. Try not to get frustrated.
- One behavioral test - this module has 100 questions like agree to scaling 1 to 5 about your opinion and doesn't have any time limit (usually takes about 45 mins). Tip: Be honest in answering these questions, since the questions will be repeated and they expect you to answer similarly , take your time and answer calmly.

(**TIP:** This round needs practice beforehand, try practicing before the test Resources:https://www.faceprep.in/capgemini/capgemini-recruitment-game-aptitude/).The results of the first round were announced on 3rd August 2024 Saturday @1:00 PM. Even though I chose the R & D role, I got selected for the Electrical and Automation (E&A) role. The next round was scheduled on 8th August 2024 –Thursday @8:30 AM.

8TH August 2024 – Thursday
Pre-Placement Talk was held between 9:00 - 10:00 AM.The next round was scheduled as Technical Interview @11:00AM.

ROUND 2 - TECHNICAL INTERVIEW
My technical interview was in physical mode. There were two panel members. The interview started with my Self introduction and the interviewer continued with the technical questions. The duration was about 30 minutes.

The interviewers were very friendly. The questions were

- Introduce yourself
- The interviewer noted that I am into sports, appreciating having a habit.
- Explain about your project, Implementation of DC DC converters using FPGA.
- How did you choose MOSFET for your project?
- IGBT Vs MOSFET
- Why is diode connected antiparallel to the IGBT?
- Will that diode protect the whole circuit or just the IGBT?
- Did your project turn out as expected?
- How did I get my internship?
- Tell me the types of motors
- Which motor is efficient DC or BLDC and what is the difference between them?
- What motors are used in EVs, considering my honors in EV?
- How do you consider yourself as a team player, and give me a situation where you expressed yourself as a leader?
- He asked about my Family background
- Why do you have mostly electronics projects? Did you work on any electrical projects, considering this is an electrical role?
- He gave me a situation to consider: you have an industry and your electrical bill is very high, how do you deal with that?
- You have a good score and you are doing honors, why didn't you choose Higher studies.
- He also insisted that I should choose any power electronics company, since I am good at that. But I stood strong in my opinion that I am very excited to work with Schneider.

(TIP : Have a smile and greet the interviewer and show them you are enthusiastic about the interview. Study all the components used in your project, their datasheets, and their use cases. Study interview questions for your respective Area of Interest. And Choose Area of Interest according to the job role)

The results were announced after 2 PM. Only One from PSG Tech and I were selected for the HR round .

ROUND 3 - HR Interview

The HR interview was held in the physical mode. The interview was about 10 minutes. The questions were

- What do you know about Schneider?
- Did you listen to the pre placement talk and he asked many questions from ppt
- Recent trends favor Computer Science; why did you choose EEE?
- Is your home within Coimbatore
- What do you consider your value?
- Do you have any questions?

(TIP: Study thoroughly about the company's products, your job description, the company's profile, recent awards, and their revenue. Listen to the pre placement talk and take notes. Prepare two or three questions for the technical interviewer and HR separately. Make them notice that you are really interested in that job. All The best. Be Yourself, Love yourself. Everything will be OK.)

On 10/08/2024 at 4.00 PM , the results were out and Thankfully I got Selected!

ARNESH S
Vandewile Savio
Coimbatore

8610517664
arnesh656@gmail.com
Arnesh S - linkedin

The interview process had 3 rounds.
Round 1 - Written Test
Round 2 – Face to Face Technical Interview
Round 3 – Technical cum HR Interview

Round 1: Written Test

The process started with a test that I had taken at PSG College of Technology. The test had two sections: one on general knowledge and another on technical questions from the core subjects. The general knowledge section had questions on the current government, and topics in History and Geography. Some of the questions included the Mughal Empire, World Wars, mountain ranges, the solar system and facts like the nth President or Prime Minister. It was enough to have some knowledge about general knowledge and core concepts to pass the first round.

Round 2: Face to Face Technical Interview

This was a campus interview; this was conducted at PSG Tech Placement cell. The interview lasted for 35 minutes. It began with a self-intro and introduction from the interviewer's side. My field of interest is Embedded system, the job post mentioned was R&D Embedded system engineer. After self intro they asked me to describe my projects, I just described what is what, haven't gone to in-depth explanation. I was questioned to describe my role as Placement representative .After considering my resume, they began questioning me about STM32, Texas Instrument MSP series controller and the related IDE's. I described the applications and features. Then I described about my internship where I spoke about QT GUI C++ compiler. I was asked about the tool chain that was incorporated in QT. Questions on main subjects were given Machines, circuit analysis and fundamentals of electricity. At last they asked me whether I have any questions, I inquired about Savio Umbrella.

Tip in a Hurry: Research the company beforehand before sitting down for the interview

Round 3: Face to Face Technical Interview
This is also a physical interview; conducted at Vandewiele Savio campus, this interview was of about 50 min, began with self intro of panel members, six members of the panel from various departments of Vandewiele Savio, began my self intro.

I told them about my internship experience in PSG Medical Devices.. Also told about soft skills developed in the duration of internship. Then they read my resume, under soft skills I have mentioned Team work so I was asked to elaborate. I was a member of Self Driving Challenge Team conducted by SAE, wherein I was able to exhibit my team work and leadership capabilities, then I began explaining about my role in the team. I was asked a follow up question regarding Yolo V3 and Open CV. Basics of C and Python were also assessed. Then I began explaining about my role and what was achieved by me as a team. One more follow up question regarding, how lane detection was implemented mathematically. I was assessed in algebra and geometry with application of lane detection. I have mentioned the line following robot as mini project in resume. While I was enumerating the things I have used in the project, they asked regarding motor controller and how it works. I began explaining about H bridge circuit and how reversing of current occurs with the graph. Then they moved on to my AOI, started with power electronics, I was questioned about MOSFET, its family, importance of Drain to Source resistance, also touched up with my project "PFC control in Boost Converter", I was asked to explain the boost operation with neat diagram with step-by-step process. I also included Embedded systems as my AOI, basics like Interrupt, ISR, Communication protocols, inter process communication methods were tested, then difference between Semaphore and Mutex was asked to explain with an example, I was also asked to write a code for the same. They asked about Philosophers dining table problem and asked differences between racing, deadlock and starving. In the end they asked me if I have any questions, I asked about the role of embedded systems engineer in Savio and the scope of the role. They explained the scope in RND. As this is HR cum Technical in between the interview I felt the pressure from the interviewers , like they will not allow us to think , will ask logic less questions, Some puzzles in between and they were also interested to know about my family background.

Tips:

1. Always have a story for every word in your resume.
2. Try to simplify your answers, interviewers expect keyword that satisfy them.
3. Always look for facial expression of the interviewers and try to change your answering style. 4. HRs will always try to pressure you, be calm and answer suitably, don't be honest in every question.

Always remember the saying "A job interview is not a test for your knowledge, but your ability to use it at the right time"

Don't stop when you tired, stop when you are done.
All the best for your Placements.

ASWIN K
HPE

Aswin K - linkedin

Here's a detailed account of each round and what I encountered:

Round 1: Online Assessment

The first round was an online assessment that consisted of:

1. **48 MCQs:** These multiple-choice questions covered various topics, including programming, data structures, algorithms, operating systems, and general aptitude, DBMS, AIML, Networks, etc,..
2. **Two Coding Questions:**
   - The **first coding problem** was a medium-difficulty question related to finding a subsequence. This required a good understanding of dynamic programming or efficient searching techniques.
   - The **second coding problem** was based on Dijkstra's algorithm. It tested my understanding of graph algorithms and how to implement them efficiently.

This round was challenging but manageable with proper preparation and practice on platforms like LeetCode and GeeksforGeeks.

Round 2: Technical Interview

The second round was a one-hour online technical interview. The interviewer was friendly and created a comfortable atmosphere, which helped ease the nervousness.

1. **Introduction:** The interview began with a few minutes of self-introduction and a brief explanation of my project. I had prepared well for this part, and my confidence helped set the tone for the interview.
2. **Coding Problems:**
   - **First Problem:** I was asked to write a program to check if a string is a palindrome. I could use any programming language of my choice. I explained my thought process and wrote the code while sharing my screen.
   - **Second Problem:** This was a linked list problem where I had to create a node, insert it, and then reverse the linked list. The interviewer appreciated my approach and clean coding style.
   - **Third Problem:** A medium-level problem related to subsequence, similar to the one in the online assessment. I solved it within 10 minutes, which impressed the interviewer.
   - **Fourth Problem:** Since I completed the previous tasks quickly, the interviewer gave me another problem. However, only 5 minutes were left, so I could only provide my intuition and approach rather than a full implementation.

Round 3: Managerial Interview

The next round was a managerial round. It focused on my project and problem-solving skills in practical scenarios.

1. **Project Discussion:** The manager asked for a detailed explanation of my project and my specific role in it. I described my contributions and the challenges I faced while working on it.
2. **Learning Platforms:** I was asked about the platforms I used to enhance my skills (e.g., scalar, Byts, GfG..). The manager asked me to rate these platforms and explain why I chose them.
3. **Problem Explanation:** The manager gave me a problem on reversing digits and asked me to explain the solution as if I were teaching someone with zero coding knowledge. This tested my ability to communicate technical concepts clearly and effectively.
4. **General Questions:**
    - What life lesson have you learned recently?
    - I asked questions about HPE acquiring Juniper Networks and how it impacts the company. I had read about this beforehand and gave a well-prepared conversation, which the manager appreciated.

Round 4: HR Interview

The final round was with HR, which focused on personality and behavioural aspects.

1. **Behavioural Questions:**
    - Share an instance where you made a wise decision.
    - Mention four locations where you would prefer to work.
    - Tell us about your parents and your hobbies.
    - Where do you see yourself in 5 years?
2. **Additional Feedback:** The HR interviewer noted that the previous rounds did not cover my areas of interest. He proposed having another round to evaluate this, but since it was late in the day, they decided to conclude the process.
3. **Results:** After a two-hour wait, the final results were announced.

DAVID NIKHIL KUMAR S A

8148019004
davidnikil220903@gmail.com
David Nikhil Kumar S A - linkedin

My journey here has been unique and fulfilling in its own way. While I've never been deeply passionate about academics, I have always believed in the importance of completing what I started. Earning this degree is part of a larger personal commitment — one that balances education with my true calling: fitness and coaching.

From an early stage in college, I discovered my passion for fitness, and it has since become a major part of my identity. I have been actively involved in the fitness industry for over four years and currently work as a fitness coach, holding certifications from the International Accreditation Organization (IAO) and approval from the Tamil Nadu Government. Through personalized training plans, nutritional guidance, and consistent support, I've helped many individuals transform their health and lifestyles.

Despite my focus on fitness, I've also explored core areas of my engineering curriculum through internships at Morris Garage and Tamil Nadu Electricity Board (TNEB). These opportunities gave me practical exposure to electric vehicle systems, relay and meter testing, BMS modules, and transformer oil analysis. I also contributed to technical projects such as an IoT-based battery monitoring system and a line-following robot, where I applied engineering concepts to real-world problem-solving.

Looking back, my journey has been about discovering my strengths and shaping a path that reflects who I truly am. With a combination of technical knowledge and deep expertise in fitness, I aspire to continue growing as both an engineer and a certified coach — ready to take on new challenges and inspire others to do the same.

Round – 1: Psychometric and MCQ

The test was conducted in 5 sections.The 1st section is a psychometric test with 51 questions to be answeredin 60 minutes. The questions were obvious. If you understand what it is like to be a worker, you can easilycrack it. There will be 4 optionsfrom which you have to choose whichyou are most alike and least alike.The next 3 sections were aptitude with 8 questions each with 8 minutes to answer. It was quite basic and unlike some companies they had the brain to choose the questions that can actually be answered in less than 1 minute. For instance, I never once practiced aptitude, I only saw some formulascouple of days before. The last sectionwas the technicalMCQ round. It had 30 questions to be answeredin 30 minutes. It coveredeverything from all the 40 subjects I studied. They even asked satellite communication questions, of which I could only understand the terms other than that nothing.

Round – 2: Group Discussion

At about 11:30or so the shortlist was announced for the group discussion. We were expectedto arrive by 1:40 pm butsince there was another companyin between, the EEE studentsalone were rescheduled to 4 pm. Until then only the mechanical studentswere participating in the discussion.

The group discussion they conducted is what an actual group discussion would happen. The group had 6 people and there was the HR. The topic given to us was that “We were NASA scientists, and we were tasked in designing a rover to perform scientific exploration on mars. Discuss on how you would build, what all material you would use, how you will test the rover and the impact on humanitythe mission will have.”. Actually, we were the only group given with 2 choices, the other choicewas designing a hydrogen truck,but because of my knowledge of space I opted for the rover and the group followed me.

I designed the electrical system for the IRDC 2024 competition for which we won the 2nd prize.So, I started to design everything and my group mates from our collegejoined me while the tech students could not match our level.Finaly we were also told to split the presentation part between ourselves and present, so I opted in presenting the engineering of the rover. Finaly, we presented everything as we discussed, starting with the material used for the structure, energy source, radiation shielding, wheels, and new scientific experiments that can be performedand we went all the way down to the financialreport of the project. The HR checkedthe time a said we had extra time and requested us to talk more.

But since we gave all the possible information 10 minutes before the end time he was surprised and said that we were the quickest group to complete the group discussion that day.And finally, at around 6 pm the shortlist came and everyonefrom our group were shortlisted for the interview for the next day.

Round – 3: Interview

Next day, the interview first started for the mechanical and mechatronics students. And later when the electrical managers came the electrical students were called at around9 30 am. I was 3rd in the electrical list and was called to the interview room only by 10 am. EvenTho I was 3rd in list, I was calledin second.

Technical Round

There were two interviewers for me. They looked super experienced but were friendly. I voluntarily gave my resume which was a goodthing because it turned out that theydid not ask anyone fora resume andjust started the interview.

Once they were fine with my name, they asked me to give an intro. I told them everything like, I am from EEE, I have done so and so projects, I am the captain of Aurora and Vayu Putra,etc. and finallyconcluded saying that I have my areas of expertise in Embedded Systems and Computer Architecture. Even after giving a 1-minute intro without breathing they both gave no reaction and were glued to their own screen.So, after a very small pause I said “I also have interest in Automobile” to grab their attention. Surprisingly it worked. They both looked at me and asked what I knewabout automobiles. I started tellingthe storied about how the Marcedes group invented the first commercial car and that whenever Marcedesdrove it peoplewould call her a witch and I also told them that I startedwatching F1 because of Mercedes and Lewis Hamilton. They were impressedby that, and we were talking about F1 for a while. Itwas at this moment, I found out that this interview would be easy.After the intro they gave me scenarios where I had to choose between EV ICV and Hydrogen powered vehicles. They also tested my knowledge in general knowledge and many other thingsalso. I answeredall the questions with facts and actual numbers.I have recorded almost all of the questions in the other document, please check it out.

To be frank,none of what I spoke in the interview was thought of in class.Everything I learnedwas from YouTube only. The entire interview was on fuel cell and ev and of what I spoke in the interview, only less than 5% was thought in class. I never thought some random YouTube side recommendation video about Mercedes would impress interviewers. The fun fact here is that I found out that Daimler was part of Mecedes only on the day of interview.

HR Round

Immediately as soon as I completed the technical interview, I was calledfor HR. The HR guy was talkingto me the whole time like I was placed in DICV and was also making jokes with me. Finaly after couple of minutes exactly on 12:00 pm he told me “I don’t know how long this will go. Pleasestay in and around the campus so we can complete thework. I know its too early but go have some lunch and relax and we can meet at around 4:30 – 5 pm”. It turns out I was the first one to have HR interview for the entire day including mechanical.

Virtual Round with VP

By exactly 3:59 I was called for a virtual round with the Vice President from the plant. I had to wait till 5:40 so that others before me could complete theirs. When I went in, my resume was already sent to him. He was reading my resume and asked me to give a self intro. I did the same thing, ending with my expertise and gave a pause and then said I also like automobiles. As expected, he reacted only after the automobile. The interview was completely based on my resume, and he checked my people skills. As I mentioned as the Captain of Team Aurora and Vayu Putra, he asked "What is your take on Leadership?". He was impressed by my answer. Finally, he
said that they were implementing all the projects I mentioned and finally, quite literally, asked "Inga vanthu veala seiyariya?", of course I said YES with a big smile.

In the same day, on exactly we were called for an announcement at 7:17 and I was given my provisional placement offer.

My Advice

Just remember that you are not God, and you do not control anything in this material world. Give up all attachments to this world and just stay in pursuit of knowledge, you will find where you belong.

sarva-dharmān parityajya
mām ekaṁ śaraṇaṁ vraja
ahaṁ tvāṁ sarva-pāpebhyo
mokṣayiṣyāmi mā śucaḥ

-Lord Shri Krishna

DHARSANA J

Round 1: Online Assessment

The firstround was conducted at PSG Tech CSE GroundFloor Lab on 30 th July 2024 at 9.30 am. The test was conducted online, and we had to choose from three domains , Computer Science,Electronics, and Electrical. I chose Electronics, and the test consisted of multiple sections. The difficulty level ranged from basic to moderate.The test had 30 questions to be completed in 30 mins with no negative marking.

Round 1 Test Sections:

1. Domain Test:

The questions coveredtopics such as:

1. Digital Electronics (Logic Gates,Flip-Flops)
2. Linear Integrated Circuits (LIC)
3. Digital Signal Processing mainlyfocused on filters

2. Gamified Assessment:

The gamified test included sections like memory testing,verbal ability and puzzle solving. High level of focus, attention, and concentration is required to perform well.We can try out the sections beforehand and attempt multiple practice trials before taking the final test.

3. Behavioral Assessment:

This section comprised 100 behavioral questions, which assessed our personality, decision-making, work approach and behavioural preferences. There was no time limit, and the key to answering was staying consistent throughout the test.

(There were no questions from aptitude in specific. Focus on basic technical concepts, practice game-based aptitude tests in AON Platform).

Round 2: Technical Interview

The results were announced on 3rd August at 1 pm and I was shortlisted for the next round. Even though we were initially allowed to choose from four different roles, I was selected for the Global Supply Chain (GSC) role.

The interview was originally scheduled to be held offline, but due to last-minute changes, it was conducted online. The interview took place in a lab at PSG Tech, and the pre-placement talk was conducted beforehand, providing an overview of the company and its expectations. Since the interview was virtual, I had the advantage of checking the interviewer's profile through LinkedIn. I analyzed their areas of expertise and current projects, which helped me anticipate the potential questions and prepare for the interview.

Duration: 30 minutes
Panel: 2 Interviewers

The interview began with a brief self-introduction where I highlighted my academic achievements, projects, interest in the Global Supply Chain domain and highlighted my involvement in Schneider Talent Acquisition Program. I had mentioned three projects in my resume, and the interviewers were highly interested in understanding their real-life applications. They asked questions about:

1.Why I chose these projects and their practical implementation.
2. Challenges faced both technically and non-technically and solutions applied.
Since the interviewer's domain expertise was in Programmable Logic Controllers (PLC), I was asked questions such as:
1. What is Ladder logic?
2. Which programming languages are used in PLC?
3.Applications of PLC in industrial automation
4.Differences between PLC and microcontrollers
5.What is switchgear, and why is protection important?
6.Types of circuit breakers and their applications
7.Concepts related to rising time and falling time of circuit breakers 8.Digitalization and IoT:
9.The most important component that supports digitalization.
10. I was asked about my weaknesses and the areas where I could improve further. The interview ended on a positive note, though I wasn'tgiven the opportunity to ask questions. The interviewers were friendly and encouraging throughout.
(Know your projects thoroughly, focus on AOI, prepare for practical application based questions, prepare questions for the panel well in advance, don't rush through answers and stay calm and confident).

Round 3: HR Interview
Duration: 15 minutes Mode: Online
Panel: 1 Interviewer
The HR round focused on personal and behavioral aspects.I was asked to introduce myself in a non-technical way, focusing on my personalinterests, hobbies, and values. I was asked personal questions, future plans and career related questions.

1. Details about my family,parents, and siblings.
2.If the interviewer were to ask my friendsabout me, what would they say?
3. My biggestweakness and how I am working on it.
4. The most significant regretin my life and how I overcameit.
5.Why did I choose engineering over medicine, given my background in biology during high school?
6. My adaptability to new environments, especially considering a move to a differentcity.
7.Myexperience of being a hostel resident and how I managed responsibilities independently.
8. How far is my home from the officelocation?

9. My expectations regarding relocation and work culture.
I was given an opportunity to ask questions, and I inquired about the interviewer's current role at Schneider Electric. She provided an in-depth response and valuable insights into the company
operations. The interview concluded on a very positive note, and I felt confident about my performance. After two days, I received the official confirmation email stating that I had been selected for the Global Supply Chain role. I was grateful for the opportunity to work at Schneider Electric.

(Show a lot of interest and enthusiasm to work with the company, Be honest and confident in your responses and that matters the most).

Important Insights:
1.Utilize LinkedIn to understand the interviewers expertise and frame your responses accordingly in case of virtual interview.
2. Focus on your domain-specific topics and stay thorough with project details.
3. Expect scenario-based questions that test practical applications.
4. Whether technical or HR, honesty and confidence in your responses matter the most.
5.Ask Meaningful Questions, showing curiosity about the company and role leaves a lasting impression.

Hard work and preparation always pay off. Stay consistent and confident.
"Believe in yourself , stay consistent and success will follow"

Wishing you all the best! For any doubts and queries feel free to contact.

girinithrs@gmail.com
Girinith Ravisankar - linkedin

Round 1: Written Test

The first roundwas a written test conductedin the morning. It consisted of two sections:

1. Aptitude Questions: There were 10 aptitudequestions that testedmy logical reasoning and problem-solving skills.
2. C Code Snippets: This section had 10 code snippets, and I was asked to predict the output or identify errors in the code.

I managed to clear this round, and the same afternoon, I was scheduled for the technical interviews.

Round 2: First Technical Interview

The first technical interview began with a discussion on the code snippets from the written test. The interviewer asked me to explain the process of obtaining the output for each snippet. This was followed by in-depth questions on **C programming**, focusing on:

- Pointers
- Storage classes
- Dynamic memory allocation
- Pointers to functions

Next, the interviewer shifted to **Object-Oriented Programming (OOP)** concepts. I explained these concepts using **C++**, providing examples for each:

- Encapsulation
- Inheritance
- Polymorphism
- Abstraction
- Virtual functions
-

I was also asked to write example programs for each OOP concept. After this, I was given two coding problems:

1. ValidParentheses (Easy level)
2. Palindrome-based problem(Medium level)
3.

I successfully solved both problems, and the interviewer seemed satisfied with my approach. I was selected for the second technical interview.

Round 3: Second Technical Interview

The second technical interview was more challenging. It started with a deep dive into Dijkstra's algorithm. The interviewer asked me to:

- Explain the algorithm in detail.
- Write the code for Dijkstra's algorithm.
- Traverse the algorithm for a specificexample provided by the interviewer.

After this, the focus shifted to Linked Lists. I was asked to write code for:

1. Creation of a linked list.
2. Addition of a node at the end.
3. Deletion of a node at the end.
4. Deletion of a node at any givenposition.
5. Reversal of a linkedlist.

Each program was verified by testing it for corner cases. Finally, I was asked to:

- Writethe code for **Binary Search**.
- Solve a **logical question** related to problem-solving.

I performed well in this round and was selectedfor the HR round.

Round 4: HR Round

The HR round was amix of puzzles and general questions. I was given two puzzles:

1. Sand ClockPuzzle: Using two sand clocks to measure a specific time.
2. Bike Puzzle: Calculating the maximum distanceyou can travelwith a given number of bikes.

Unfortunately, I couldn't arrive at the correct solutions for both puzzles, but I proposed various approaches and explained my thought process.The HR also asked me about my background, interests, and why I wanted to join MobiCip.

Result

The next day, the results were announced, and I was overjoyed to learn that I had been selected for the positionat MobiCip. The entire interviewprocess was a great learning experience, and I am excited to start this new chapter in my career.

Key Takeaways:

·Strong fundamentals in C/C++ and data structures are crucial.
·Practice coding problems regularly, especially on linkedlists, algorithms, and logical puzzles.
·Even if you don't know the answer, proposinglogical approaches and thinking aloud can leave a positive impression.

I hope this experience inspires others preparingfor their interviews. All the best!

GOWSHIKA A D

gowshikadharmalingam@gmail.com
Gowshika Dharmalingam - linkedin

.My journey in engineering has been all about learning through doing, pushing limits, and balancing academics with leadership and service. In my very first year, I built a project called Robusta, a line-following robotic car equipped with IR and ultrasonic sensors. It was my first hands-on experience in integrating hardware with logic using Arduino, and it taught me the joy of watching theory turn into functionality.

By the third year, I had moved on to more advanced work. My final year project was a solar powered irrigation system that uses BLDC motors and a boost converter, with an MPPT algorithm to ensure stable voltage under varying sunlight conditions. This project allowed me to explore the intersection of sustainability and technology, and reinforced my passion for renewable energy systems.

To broaden my practical knowledge, I completed a 7-day implant training at the Tiruvannamalai Electricity Board, where I gained insights into the functioning of power distribution systems. I also pursued a certification course in SQL for beginners through Tutorials Point, believing that a well-rounded skill set is essential in today's interdisciplinary world.

To deepen my understanding of cutting-edge technologies, I attended workshops on RADAR and its working at IIT Palakkad, as well as a session on 5G Communication Networks. These experiences gave me valuable insights into modern communication systems and expanded my technical horizons beyond the classroom.

Beyond academics, I have always strived to take the lead. I am an NCC cadet, proud to have earned Alpha grade in both B and C certificate examinations, and have served as a Company Quartermaster Sergeant (CQMS). Additionally, I have attended two Combined Annual Training Camps in 2023 and 2024, which further enhanced my discipline and teamwork skills. These experiences taught me responsibility, leadership, and resilience—qualities that extend far beyond the classroom.

I also enjoy contributing to campus life. I served as the Event Coordinator for The Gallent Quiz, a non-technical event at Yukta 2024, and was part of the Reserved Student Force that supported the event's execution. These experiences taught me the value of teamwork, planning, and communication.

To my juniors: **Don't wait for the perfect moment to start. Explore early. Learn through experience. Take part in events, ask questions, and challenge yourself. Engineering is not just about marks—it's about mind set. Build with curiosity, lead with confidence, and grow with purpose.**

HARI NANDANA H
Siemens Energy
Pune

8078152361
hnandana424@gmail.com
H Hari Nandana – linkedin

Introduction

Siemens Energy is a global leader in the energy sector,focusing on sustainable, innovative, and efficient solutionsfor power generation, transmission, and storage.It provides a wide range of products and services, including gas and steam turbines, wind turbines, transformers, grid solutions, and digital services.

Recruitment Process
The hiring process involved 3 different rounds

Round 1:Online Test (22nd Sept 2024)
Total Duration: 1 hour 20 mins
It consistsof both Aptitude and Technical Question

- Aptitude

DifficultyLevel: Moderate
Quantitative aptitude (like Percentage, Simple Interest, Work and Wages etc.)
Qualitative aptitude (Data Interpretation, Number Series, Age -problems, etc)
Note:Practice aptitude from all key topics, not just the listed ones. Regular practice is vital for completing tests on time with accuracy.

- Technical

Difficulty Level:Easy to Moderate
Questions from core subjects like Electrical Machines, Circuit theory, Protection& Switchgear, T&D etc.
The questions included not just theory but also simple calculations and formula applications.
Note:Develop a strong understanding of core fundamentals, especially in electrical subjects, as they are crucial for this company.

The online test results were published on 5th Oct 2024

Round 2: Technical Interview (7th Oct 2024)
On this day, the process began with a pre-placement talk which provided insights and information about the company.
The technical round was an online interview with two interviewers on the panel.The interview began with a self-introductionand while I was speaking about myself, the interviewers quickly glanced at my resume. Majority of the questionswere focused on my projects, particularly my ETAP-based project on Harmonic Analysis of Grid-Connected Solar PV Systems in Low-Voltage Networks.

This project was discussed in detail, with the interviewers concentrating on the concept of harmonics and how they affect the power system. After this, I was asked about another project of mine related to detailed energy auditing and also question regarding my internship experience.

Apart from my projects, the interviewers asked technical questions from areas of interests and also other core concepts related to transmission and distribution (T&D) systems and electrical machines. Few ofthe questions are:

1. What are the key components of a transformer?
2. What is the difference between a lightning arrester and a surge arrester?
3. Can you explain how circuit breakers work?
4. What are the main components found in a substation?
5. Insulation in transformers

In conclusion, it's essential to have **in-depth knowledge of all your projects, being able to explain every aspect in detail. Be strong in your areas of interest** and have a solid understanding of fundamental electrical engineering topics(even in the subjects not mentioned as your areas of interest), particularly related to power systems and machines.

- Be prepared to talk about everything mentioned on your resume, from internships and online courses to soft skills (they might ask).

The interview process will range from easy to moderate level of difficulty, so don't stress too much. Stay calm, answer confidently, and remember that it's okay if you're unsure about something—just acknowledge it honestly. Always maintain a positive and optimistic tone throughout the conversation.

Round 3: Telephonic HR Round (9^{th} Oct 2024)
The HR round was a brief 10-minute call focused on basic HR questions. They asked about my family background, my willingness to relocate, and why I was interested in joining Siemens.
The results were announced after an hour, and I received the mail confirming successful selection.
In short, a solid understanding of core concepts and your project, combined with confidence and a positive attitude, can help you succeed in this interview.

HARSHINI Gu
Renault Nissan Technology & Business Centre India
Chennai

RENAULT NISSAN TECHNOLOGY & BUSINESS CENTRE INDIA

7550342114
harshinigurunathan17@gmail.com
Harshini Gu - linkedin

Round 1 - Online Test (Aptitude + Test)

The online test had two sections: **Aptitude** and **Technical**.

Aptitude Section:

The questions were of easy to moderatedifficulty, but the real challenge was the time constraint. Topics included:

- Number systems
- Profit & Loss
- Logical reasoning
- Blood relations
- Speed, distance,and time

To tackle this, I recommend practicing regularly on platforms like Indiabix and focusing on
time management during practice. Focus on speed and accuracy.

Technical Section:

This part was quite comprehensive, covering almost all core subjects in electrical and electronics engineering. Key areas included:

- Electrical Machines
- Electronic Devicesand Circuits (EDC)
- Circuit Theory
- Digital Electronics
- Application-based questions

Strengthen your **basic concepts** and basic essential formulas.Be prepared to apply these concepts in real-world scenarios, especially for devices and machines

Round 2 - Technical interview

While my core interest lies in electrical subjects, I was interviewed by an **Embedded Systems Panel**. Interview started with a brief self-intro and they directly jumped into questions from embedded systems, C programming and embedded C programming and RTOS

1. What is an embedded system?
2. Which programming languages are you proficient in? Rate your proficiency level.
3. What are the different types of data structures in C?
4. Explain the difference between a structure and a union in C.

5.Questions related to memory allocation, such as malloc and calloc.
6.Concepts from trees and graphs in C.
7.Memory hierarchy and memory organization
8.Multitasking and multiprogramming
9. Questions from CPU scheduling
10. About virtual memory
11. Write embedded C code to control an LED using PWM, turning it on and off at specific intervals.
12. Calculate the duty cycle of the PWM that needs to be applied,
13. Program in doublylinked list
14. Write delayprogram

Project-Specific Questions:
Since I worked on a project involving embedded systems, I was also asked to elaborate on specific aspects of my work:

1. What embedded systems were used in your project?
2. Which programming language did you use for your project, and why and compiler used?
3. What components did you use, and what are their specifications?
4. Communication protocol used in my project and its features
5. What is PLC, controller used, programming used and software used.(I mentioned PLC project)
6. What is SCADA, RTU,and where can be used in real time

Be well-versed in every detail of your projects. The interviewers often don't expect perfect answers. Instead, they want to see how well you handle unexpected situations and how you manage your thought process.
Be prepared for any situation and be confident in your responses, whether or not they are perfect!

<u>Round 3- HR Interview</u>
The HR round primarily aimed to assess your personal qualities, including self-awareness and adaptability

1. Tell us about your family background
2. What are your strengths and weaknesses? **Answering this wisely is crucial**. When discussing strengths, focus on attributes that align with the role. For weaknesses, be honest but strategic—mention a real weakness, but most importantly, show how you've worked to improve it. Interviewers want to see if you're self-aware and proactive in overcoming challenges
3. .Leadership roles undertaken and problems faced as leader and How I overcame it.

The results were announced only on November4, 2024.

- Align your area of interest with the company
- While explaining the project also explanation where can we use it in real time
- You will gain many insights from the pre-placement talk, so pay attention to company values, work culture, and expectations

Even if it's not today, somehow it's going to happen. Be patient, stay focused, and **trust the process!**

HARISH MUTHU SHANKARAN B
Visteon Corporation
Coimbatore

8056481972
harishmuthushankaran@gmail.com
Harish Muthu Shankaran - linkedin

Visteon Corporation, a leading automotive technology company, visitedour college to recruit for the role of Software Engineer. The recruitment process consisted of six rounds.

Round 1: OnlineTest
The online test was conducted on **13th August 2024** and consisted of 38 questions: 35 multiple-choicequestions (MCQs) and 3 codingproblems. The MCQs covered both aptitude and technical topics. The technical section included questions on **Embedded Systems, C Programming, and Operating Systems**.

For the coding section,only **C and C++** were allowed,and the difficulty level ranged from easy to medium. Results were announced the next day, and I was shortlisted for the next round.

Round 2: Written Test
This round was conducted on **22nd August 2024** at AmritaVishwa Vidyapeedam as part of a pool campus recruitment. Candidates were divided into groups and assigned to panel members. We were given 3 coding problems to solve within 30 minutes using C or C++. The topics included **Trees, File Handling, and Strings**.

I successfully solved the problem based on strings. After completing the test, we had to explain our solution to the panel member. Results were announced after the test, and I advanced to the interview rounds.

Round 3: Technical Interview
The technical interview was conducted on the same day. It began with the interviewer asking me to rate my knowledge in **C and C++**. Key questions included:

- Memory allocation and deallocation (with yntax).
- What is a resistor?
- Edge triggering vs. level triggering.
- Definition and invocation of a constructor.
- Write a program using a constructor.
- Concepts of OOP, inheritance, and hybrid inheritance.
- Explain the diamond problem in inheritance.
- What is an embedded system?
- Difference between OS and RTOS.
- Byte allocation for int, char, and float.

- Write a program using structures and discuss the difference between structures and unions.

I was also asked to explain the program I solved in the previous round and to attempt the remaining two problems. I successfully solved the file-handling problem. This round primarily focused on verifying basic knowledge of **C and C++**, and there was minimal elimination.

Round 4: Managerial Round

This round saw significant eliminations compared to the previous ones.It began with a self- introduction, followed by questions about one of my projects. The manager posed scenario- based questions such as:

- How would you handle a taskwhen seniors and managers are unavailable to assist?
- How would you communicate with your manager aboutmissing a deadline?
- What is mileage,and how is it calculated? Can you find mileage logically?

I also askeda question aboutthe company. The interview lastedapproximately 20 minutes, and I progressed to the next round.

Round 5: HR Interview 1

In this round, the HR interviewer asked me to introduce myselfand inquired aboutmy interest in **C programming**. Other questions included:

- What do you think about the role of EVs in the future?
- Why Visteon?
- Location preferences.
- Interest in higher studies.
- Knowledge of the automobile industry.

The interviewer also provided insights about the company. I concluded the interview by asking a question.

Round 6: HR Interview 2

The second HR interview was brief.I was asked to:

- Introduce myself.
- Describe how I learned C programming.
- Share personal details, such as my hometown, travel plans to Coimbatore, and how I planned to return to college.

Final Result

The results were announced the following day. I, along with another student from my college, got placed at Visteon Corporation.

"Dream big, stay focused, and never give up. Every step forward brings you closer to success!"

All the best!

INIYAN A S

Round 1: MCQ (online

Date and Time : Aug 23, 2024
Duration : 45 minutes

- 40 questions-20 aptitude questions+20 C snippets output questions
- 40 questions must be solved in 45 minutes. Aptitude questions were from ratio and proportions, speed and time, time and works etc. For solving C questions Karthi sir's class and notes would be enough.

Round 2: Technical Interview 1 (face-to-face interview)

Date and Time : Aug 28, 2024
Duration : 40 minutes

- Interviewer started with my Self-Introduction
- There were 10 topics presented to me. I must pick one topic and to speak for 3-4 minutes. There were many topics like embedded systems, digital camera, serial communication (SPI, I2c, UART), CAN communications module etc. I took digital cameras spoke for 2-3 minutes
- Then interviewer pointed out to solve 4-5 aptitude questions from probability, permutation and combination, seating arrangement. I solved them and explained concept behind them.
- Interviewer asked me to solve few programming question like Fibonacci series, find whether digit present in given number series. I solved those question in C and explained concepts behind it.

Round 3: Technical Interview 2 (face to face interview)

Date and Time : Aug 28,2024
Duration : 1hr 15 minutes

- First Interviewer started with question" how do you rate yourself in C and C++, OOPS concepts by 10?". I answered him I would rate 8 out of 10.
- Then interviewer asked to design student managements system in C++. He explained the design of problem like what are the input , what need to stored. After I solved, He asked to build as linked list which contain each node contain one student data.

- Interviewer gave another problem which I need to concatenate two charter string using only '+' operator using operator overloading.
- Interviewer asked me few questions from my projects which I mentioned in my resume.

Round 3: HR (face to face interview)

Date and Time : Aug 28,2024
Duration : 5 minutes

- Self-introduction.
- Interviewer asked my family background.
- Interviewer asked my aspirations in life.
- Few questions from projects mentioned in my resume.

Preparations tips:

- Present yourself confidently in Interview, have good communication in interview, express yourself well.
- Then prepare for the projects and the subjects you mention as areas of interest. Important topics need to be revised often.
- Study the basic concepts of OOPs and C programming.
- Concentrate on the Areas of Interest mentioned.
- Prepare aptitude questions and taking tests in the PAT portal, online site would be good.

Round 1: MCQ (online

Date :Oct 21,2024
Duration : Aptitude – 30 minutes
Technical Questions- 30 minutes
The first round consisted of two parts.

The first part was the aptitude section, which included questions from Quantitative Aptitude, Logical Reasoning, and Verbal Ability. The questions were of easy to moderate difficulty. Practicing problems on platforms like Indiabix can be helpful for solving these types of questions.

The second part was the technical MCQ section. The questions were based on core electrical subjects. Focus more on Machine sand Power systems as many questions where asked from these domains. No numerical questions were included, so focusing on basic theory concepts will help clear this round.

Round 2: Technical Interview 1 (face-to-face interview)

Date : Nov 7,2024
Duration : 30 minutes

At the start of the interview, the interviewer asked me to introduce myself and inquired about my family background.
The questions were more practical in nature rather than based on theoretical knowledge. Some of the questions asked were:

1. Explain the working of a steam power plant.
2. Describe how power is generated and how it reaches our homes.

There were a few other similar questions.

After this, the interviewer moved on to my area of interest, which was Electrical Machines and Power Electronics. The questions in this section were easy and straightforward.

Next, the interviewer referredto my resume and asked me to explain one of my projects.

He asked a few questions about the working model of the project. Since I had mentioned some roles I held during my college period, he also asked about the challenges I faced in those roles.
Finally, as I had completed an internship at a switchgear manufacturing unit, the interviewer asked about my learnings from that experience .No questions were asked outside the scope of my resume, except for the general ones mentioned above. Hence, it's crucial to include only what you are confident about in your resume.

Round 3:HR(Face to Face Interview)
Date : Nov 7,2024
Duration :12 minutes

In the HR round, they inquired extensively about my family background. They asked whether I planned to pursue higher studies. Since this job is based abroad, they also asked if my family would support the decision. Additionally, they inquired about my hobbies.
They also asked about the leadership qualities I possess. The HR round was very easy and felt more like a conversation than an interview.

The final results were announced on Nov 11, 2024.

KARTHIKEYAN S
ELGI Electric & Industries Ltd

Always Better.

8610004337
karthivklk@gmail.com
Karthikeyan S - linkedin

The recruitment process consists of three rounds which took a whole day and the results were shared at the same day. 1. Written Test 2. Group Discussion 3. Technical + HR Interview.

Let me tell you straight that be clear about taking this job opportunity because they didn't want students to waste their time during the interview process. That's why, they told about the bond details and asked the students to attend only if you are willing to continue the interview process upon accepting their conditions.

ROUND 1 : WRITTEN TEST

The written test had three sections consisting of MCQ based Aptitude questions from Numerical, Logical Reasoning and Verbal part. Each section has 25 questions and are easy to solve. Calculators are allowed during the written test. The questions asked in the written test covers:

- Time and Work
- Profit and Loss
- Simple and Compound Interest
- Upstream and Downstream
- Speed and Distance
- Probability
- Age, Direction
- Permutation and Seating
- Blood Relation
- Tenses, Voices
- Vocabulary

Note: the candidates who scored high marks were grouped as a panel for group discussion. The questions were simple and do practice on that.

ROUND 2: GROUP DISCUSSION

The second round was Group discussion. The shortlisted candidates are grouped into different panels. I was in the first panel and the topics given were "INDUSTRY 4.0" and "IS LIFE WITHOUT INTERNET, GOOD OR BAD? ". Everyone in our panel did spoke well. They shortlisted most of the candidates from our panel for interview.

Tips:
1)Be confident about your point and do not wait for others to initiate the discussion.
2) Listen to others and make your point more distinctive.
3) Practice GD with some general topics before the drive.

ROUND 3: TECHNICAL AND HR INTERVIEW

The third round was technical and HR interview. After the shortlist was announced. They asked us to fill the details like personal information and participation of the company's drive in the past, right before the interview.

It took about 20 to 25 minutes. They started asking personal questions and asked about the projects I did. They also asked further questions like:
1) Do you know PLC programming and What is PLC?
2) What are the types of plc programming and how well are familiar with it?
3) Have you done any projects related to that?
4) Do you able to learn further in that field and are you interested to learn?
5) why do you want to join our company?
6) What do you know about our company and it's new projects?
7) Are you interested to join in a factory based company?
8) Are you able to relocate and come to the company office?

Tips:
1) Be Confident, calm and give a good self-intro.
2) Do divert the talk towards your achievements and other activities even if they didn't ask about it.
3) Read about their projects in their website.

KAVINVEL D
Data Patterns
Chennai

9442131036
kavinveldhanasekaran1507@gmail.com
Kavinvel D - linkedin

Role: Embedded Software Engineer

The company offered for two roles
1) Embedded Hardware Engineer
2) Embedded Software Engineer
I chose Embedded Software Role

First Round
Venue: PSG Tech Block –D
It was a written test after the Pre-Placement Talk. It contained two sections

1) Aptitude

- Ages
- Profit and Loss
- Partnership
- Work and Time
- SI and CI
- Blood Relations
- Pipes and Cisterns
- Percentage
- Speed

2) C-Programming Test

- Code Snippets
- Basic C
- Strings
- Structures
- Unions
- Pointers
- Arrays

Refer BYTS note you will easily crack this
Total marks (20+20=40)
Results were announced after a Week
They Said during the Pre-Placement, that if you get selected you will have to come to Chennai to Attend the Interview

Second Round
Venue: Chennai (Head office)

Technical Round (1:45 hrs)

The Interviewer first gave a piece of paper and told to write whatever you know in C and CPP
I wrote the Topics I knew, after that he asked questions that had everything related to C and CPP.
Some trickier questions were in the topics
1) Bit Manipulation
2) Dynamic Memory Allocation
3) Linked Lists
4) Structure Padding and Packing
5) Basic Knowledge on OOPS and Communication Protocols

HR round

Once I went in he asked to Introduce Myself and asked about myself and
1) Why should Hire you And rest basics
He then concluded and asked if you had any questions .This is the most critical line be sensible and ask sensible questions .Then said I was **Selected.**

Placement is all about Talent, Skills, and Time Management etc…… Really, the answer is no.
There is another factor called Luck and Fortune, It plays the Major Part you will Know when you come into placements .Don't be choosy about hardware and Software.

kaviyavkd@gmail.com
kaviya s – linkedin

Role: Graduate Engineer Trainee
No. of Rounds: 5

Round 1: Registration
Initial enrolment for the hiring process. Candidates were asked to submit their resumes and fill out basic details for
eligibility.

Round 2: General Aptitude Assessment
This round evaluated analytical, verbal and numerical reasoning.
• **Date & Time:** 10 DEC 2024 & 04:00 PM to 08:00 PM
• **Mode:** Online and Proctored
• **Attempts Allowed:** 1
• **Topics Covered:** Percentages, Ratio & Proportion, Time-Speed-Distance, Data Interpretation, Number series,
Mirror Images etc.
• **Duration**:45 Minutes
• **Level:** Easy to Medium
• **Tips:** Practice from IndiaBix, RS Aggarwal

Round 3: Critical Thinking and Domain Assessment
This round combined technical and analytical thinking.
• **Date & Time:** 12 DEC 2024 & 4:00 PM to 8:00 PM
• **Mode:** Online and Proctored
• **Attempts Allowed:** 1
• **Duration:** 70 Minutes
• **Domain Covered:** Core technical subjects like Electrical Machines, Power Electronics, Protection & Switch
gear, Network theory
• **Critical Thinking:** Included situational judgment problems, decision-making scenarios, and process-based
logical reasoning.
• **Level:** Medium
Round 4: Psychometric Test
A behavioral assessment designed to understand personality traits, stress handling, and teamwork capabilities.

• **Date & Time:** 14 DEC 2024 & 4:00 PM to 8:00 PM
• **Mode:** Online and Proctored
• **No. of Questions:** Around 70
  • **Duration:** 70 minutes
• **Purpose:** Evaluate attitude, adaptability, and workplace behavior.

Round 5: Technical + HR interview

The list of shortlisted candidates for the interview round was officially released on 31st January 2025. Only those who
successfully cleared all the assessment rounds were selected for the final interview.
• **Date:** 3rd Feb 2025
• **Duration:** 30 minutes
• **Mode:** Physical
• **Interview Panel:** 2 HRs + 1 Technical Interviewer

HR Interview:

Questions included:
• Your name and Family background (in detail)
• Tell about your hobbies and questions were asked based on the answer.
• Why not higher studies
• What is your Strength and Weakness
• Where do you see yourself in 5 years
• Willingness to work in shifts
• Openness to relocation
• Preferred domain of work and why
Tip: Stay genuine, clear, and confident. HRs focus on your mindset and adaptability.
Technical Interview:
Asked practical, scenario-based technical questions:
• How to design a bus bar
• How to select a circuit breaker, given two current values
• You were expected to explain your design approach, selection criteria, and real-world application logic
Tip: Brush up on industrial design standards (e.g., current density for copper/aluminium, breaker rating selection)
and be prepared to justify your choices.
The results were announced on **5th Feb 2025** and **I got Selected !**

Key Takeaways:
1. Aptitude and core technical subjects must be strong.
2. Psychometric and critical thinking tests require presence of mind.
3. Be prepared with your project explanations
4. Practice mock interviews to build confidence.
5. Research the company beforehand — their products, vision, and tech focus.

KIRUTHIK KUMARAN K
Welkinrim Technology
Chennai

8825768507
kiruthik.kumaran.firmware@gmail.com
Kiruthik Kumaran K - linkedin

Round 1: Written test
Date : 17.12.2024
Role : Firmware Engineer
The first round of the interview was conducted at D block of the PSG college of Technology with the pre placement talk on introducing what the company was doing. Then the questions were displayed for two roles one was hardware Engineer and the other was for the Firmware Engineer. I chose Firmware Engineer in the placement portal and that was my area of interest.
The questions were the following topics:

1. Shift operators.
2. Logical operators
3. Pointers
4. Function call
5. Bit manipulation
6. Blocking and Non Blocking codes

Round 2: Technical Interview
Date : 17.12.2024
Panel 1 : Two members
Duration : 2 Hours
Two hours after writing the written test result was announced and I was selected for the next round of the interview process, Technical Interview. This round focused mainly on things and skills that have been put in the resume. So just put what you know in the resume, don't put unnecessary things that you are not sure about which could lead to a bad experience.

I was asked questions regarding the project that I have put in the Resume. Understand each concept used in the project. For example, I used a project which involved arduino uno, ADC, PID controller and Motor - basically it was a DC motor speed control. They asked me to implement ADC through software. They asked me if I knew how to register level programming on the Arduino.

While other questions were regarding PMSM , BLDC motor working . Learn the basics of EDC which is so important to crack this interview. They asked me a question regarding MOSFET and their characteristics. It is also good to know about all the keywords in the C programming language. I was asked questions regarding the static and volatile keywords in the C programming language which is a frequently used keyword in Firmware Engineering.

Basically the interview took two hours because there was a strong competition for the Firmware role. From 16 members only two were selected. So to summarize the questions were from C programming, Components of Microcontrollers, Electronics, and also Bit Manipulation.

Round 3: HR Interview
Date : 18.12.2024
Panel 2 : Two members
Duration : One hour
During the HR round, the focus was mainly on personal and behavioral aspects. I was asked to introduce myself in a non-technical way, emphasizing my interests, hobbies, and values. The discussion also included questions about my personal background, team role, future goals and career aspirations.

1. Can you share some details about your family, including your parents and siblings?
2. Why did you choose engineering, specifically electrical engineering?
3. What made you choose PSG Institute of Technology and Applied Research?
4. What roles and responsibilities have you taken on in college?
5. What have you learned from these roles?
6. What challenges did you face while handling your responsibilities?
7. How did you overcome those challenges?
8. What extracurricular activities are you involved in?
9. What non-technical challenges did you encounter while working on your team project?
10. How did you approach and resolve those challenges?
11. What is your expected salary?
12. How long do you plan to stay with Welkinrim?
13. What are your expectations from Welkinrim?
14. Where do you see yourself in the next 10 to 15 years?
15. What are your career plans for the next 5 years?
16. What is your expected salary after 3 years?
17. Do you own Bike?
18. Why do you choose Welkinrim instead of some company in Coimbatore?

Answer these questions genuinely and with some interest that is enough for you to pass this round. Also be honest in some questions like “Do you own a bike?” They asked this because the company was in a remote location with problems in the transport facility.

General Tips:

1. Be confident in the C programming language and concepts - use indiaBix.
2. Learn use of every keyword in C.
3. Be good in pointers - there is a channel called pyjama bruh and it contains a playlist for pointers.
4. Learn the basics of Digital and Analog Electronics.
5. Learn FreeRtos and try to implement it in MCU like STM32.
6. Learn the basics of OS and Linux Commands.
7. Finally, DSA in C is required and it is to be learnt for better opportunities to crack the interview and is very useful in future work.

Platform- HackerRank
(Section wise only answering allowed)

MCQs

- **Code Snippet and find the output**

Python- Is 0.5==0.5? find output, C based questions

- **Electrical Electronics**

(average value of the voltage V(t), Given volt applied DC motor what is the maximum power developed?
True or False- For input signals with low noise, derivative control helps improve system stability and responsiveness. Derivative control has the ability to anticipate an increase in error and works to eliminate the error.
The signal given by the equation En=∑ | x(n) | 2 | x(n) | 2 is known as? highly dropped diode? Reverse Voltage Protection)

- **Computer Networks** Based- Some Technical also

What is the minimum ip header size in bytes? -20 bytes. IPv6?

- **Microprocessor and Microcontroller basics**

Address bus flows in which direction? Control bus, data signal flows and logic gates

- **Scenario based**

Choose the answer which fits best with the group-Wool, silk, Leather: Cotton, nylon, Linen, Fur, Which word means-with passionate or intense feelings? temperamental, transitory, disconsolate, ardent.

Coding
2 questions- Any language is acceptable
Q1 : A substring is a group of contiguous characters in a string. For instance, all substrings of abc are [a, b, c, ab, bc, abc]. Given a binary representation of a number, determine the total number of substrings present that match the following conditions:
1. The O's and 1's are grouped consecutively (e.g., 01, 10, 0011, 1100, 000111. etc.).
2. The number of Os in the substring is equal to the number of 1's in the substring. Example s = 001101
The 4 substrings matching the two conditions include [0011, 01, 10, 011. Note that 01 appears twice, from indices 1-2 and 4-5. There are other substrings, e.g. 001 and 011 that match the first condition but not the second.

string s: a string representation of a binary integer
Returns int: the number of substrings of s that satisfy the two conditions Constraints 5 ≤ /s/ ≤ 5 x 105
each s[i] is either '0' or '1'

Q2.Implement a Least Frequently Used (LFU) cache data structure of size cacheSize that handles two types of queries, GET and PUT. A GET query attempts to retrieve the value of a given key.
If the key is present in the cache, it is returned. Otherwise, it returns -1. A PUT query updates or inserts a key-value pair into the cache. When the cache is full, the least frequently used key is removed to accommodate the new key-value pair.
If there is a tie in the frequency of keys, then the least recently used key is removed. Return an array of integers where each ith element is the answer for the ith GET query.

Try to solve all the mcqs and solved 1 coding question completely (10 test cases) and the 2nd one atleast partially. Out of 230 students 27 students were shortlisted for the next round.

Round - 2 (45 mins)
Technical round- Microsoft teams

The Interviewer asked me to start with a self-introduction. I gave about 2 mins of self intro with projects. Then he introduced himself.
1. He began by asking me to explain the projects listed on my resume. I started with the first project, and he asked me to draw the workflow of the project using Paint.

2. Questions will be based on your project, so make sure you are thorough with it and confident when explaining.
3. Although I didn't mention Power Electronics as my area of interest, the interviewer asked some basic questions related to it, considering I am an Electrical student. The questions included topics like power converters—such as inverters, rectifiers, choppers, and buck- boost converters—and their working principles with examples. I was also asked to explain the working of an inverter in a house.
4. The interviewer asked me to share my screen and provided a link to an online compiler in the chat. I was asked to write a code for factorial. I successfully obtained the desired output.
5. Some basics about C programming were asked about pointers, static, extern . Once I completed the first round I was called to the round 3 next day.

Round - 3 (30 mins)
Techno Managerial Round - Microsoft teams

He was reviewing my resume for like 2 mins and then asked me to give a self-introduction.

1. He started with my internship experience and projects.
2. Again, explain about the project deeply and questions were from it.
3. What is CAN? Working of Controlled area network. Check basic communication protocols.
4. Have some knowledge about Aptiv products and solutions.
5. Tell us about some of your extracurricular activities in college and the positions you held in them, such as in clubs and associations.

Round - 4 (30 mins)
HR round- Microsoft teams

1. Which year of college do you consider to be the most challenging? How you handled it?
2. What situations cause you stress, and how do you manage them effectively?
3. He asked about my involvement in sports activities.
4. He asked me about my family.
5. Are you okay for reallocating to Bangalore?
6. And finally, do you have any questions?

ALL THE BEST

Round 1: Online Assessment
The first round was an online assessment divided into four sections. Each section tested different skills, ranging from technical knowledge to typing speed and behavioral traits.

Section 1: Aptitudeand Technical Questions
Technical Questions:

- **Networking**: Questions on OSI layers,TCP/IP, and basic networking concepts.
- **Digital Electronics**: Questions on logic gates,flip-flops, and basiccircuit design.
- **DBMS**: Questions were asked on Database management systems.
- **C Programming**: A few code snippets were provided, and I had to determinethe output. The programs involved concepts like loops, pointers, and recursion.

Section 2: Essay Writing
A topic was provided(Mine was: "Isvillage life betteror city life better?"), and I had to type an essay within a specified word limit (e.g., 200–250 words). The focus was on clarity, grammar, and coherence.

Section 3: Gamified Aptitude
-This section was unique and engaging. It involved solving puzzles and logical reasoning questions in a gamifiedformat. The questionswere timed, and the interfacewas interactive, making it feel like a game.

Section 4: Behavioral Assessment
-This was a behavioral assessment to evaluatemy personality traits,work style, and compatibility with the companyculture. It includedsituational judgment questions and preference-based scenarios.

Round 2: Programming Round

- This round focused on coding skills.The rules were strict: only C and C++ could be used to solve the problems.
- There were 2 problems of medium difficulty, and each problemwas allotted 20 minutes.

Round 3: Technical Interview
-The technical interview was scheduled for **15 minutes**, but it extended to about 20 minutes.
-**Self-Introduction**: The interviewer asked me to introduce myself.I briefly talked about my educational background, skills, and interests.

-Project Discussion:
-I was asked to explain one of my projects in detail.
-The interviewer asked follow-up questions about the technologies used,challenges faced, and how I overcame them.

Technical Questionson C Programming:
1. **What are functions**?
-I explained that functions are reusable blocksof code that perform a specific task.They help in modularizing the program and improving readability.
2. **Explain the types of functions**.
-I discussed library functions(e.g., `printf()`, `scanf()`) and user-defined functions. I also explained the difference between functions with return types and `void` functions.
3. **What is a token in C programming?**
-I explained that tokensare the smallestindividual units in a C program, such as keywords, identifiers, constants, strings, operators, and special symbols.

Topics to be covered:

1. A**ptitude and Technical Section**: Brush up on networking, digitalelectronics, and C programming basics. Practice aptitude questions regularly.
2. **Essay Writing**: Work on typingspeed and practicewriting concise, well-structured essays on trending topics.
3. **Programming Round**: Focuson data structures, algorithms, and problem-solving in C/C++. Practice on platforms like LeetCode or HackerRank.
4. **Technical Interview**: Be prepared to explain your projects in detail. Revise core programming concepts and practice explaining them in simple terms.

MADHESHWARAN S
Yantra Vision
Banglore

75502722181
imadheshwarans1203@gmail.com
Madheshwaran S - linkedin

The interview contained 4 rounds:
Round 1 - OnlineTest
Round 2 - Technical Interview 1
Round 3 - Technical Interview2
Round 4 - HR Interview

Online Test:

The Online test was conductedon 23rd August 2024. We had to answer **40questions in 45 mins** which comprised of

- Quants (Speed, Distance, Time, Percentages, Time & Work,Ratios, Pipes & Cisterns)
- Logical (Seating arrangement*, Statement & Conclusion)
- C Snippets

Questions were **easy to moderate in difficulty**, and those questions can be answered easily with good practice. The result of the shortlisted students was announced on 26th August 2024 and I got shortlisted for the interview process.

***Seating arrangements were asked in the first round (online test) of most companies.**

Technical Round – 1:

The interview process happened on 28th August 2024 at the PSG Tech campus.

The company already had a format for the 1st round of technical Interviews. At the beginning, the interviewer asked me to introduce myself. Then he told me to explain one of my projects in detail including the circuit diagram, Block Diagram, and some follow-up questions about the project. Then he gave around 5 to 6 topics that were more related to embedded systems and asked me to speak for 5 mins about any one topic in detail. Then he gave me 2 basic C programs and asked me to write the code and explain the logic for those codes.

Finally, he asked me do I had any questions and I asked a few questions after that the interview came to an end which lasted for around 50 mins.

Technical Round – 2:

After some time, I was called for the 2nd technical round. As always, the interview started with a self-intro and then a projected planation with some follow-up questions. After that, I was asked about some C concepts like,

1. Explain the compilation process of the C program
2. The structure of the memory segment
3. Which memory segment stores the extern values?
4. What is a linker?

5. What is Static& Dynamic memory allocation?
6. What is a linked list and its applications?

Then he gave me some array programs and asked me to write code for the same usingany online compiler. The questions were,

1. Spiral Traversal of a 2D matrix
2. Linked List creation
3. Rotate a 2D matrix by 90 degrees clockwise
4. Find the pair which adds up to give the target sum from a linear array This round lasted for around 1 hr 20 mins.

NOTE:

- The number of questions, type of questions, and duration of interview differed according to the panel.
- These types of questions can be foundat **Leet Code or Geeks for Geeks.**

HR Interview:

The HR asked me about the workshop I have conducted at Yukta: and then asked me whether I knew in what areas Yantra Vision is currently working (just have a look at their website before attending the interview) he also explained to me some of the areas they are working on. Following that I asked him some questions about Yantra Vision.

The final resultswere announced on the day itself and I got placed at Yantra Visionwith an Intern + FTE offer.

Tips:

- Karthi sir's class will be more helpful to clear codingproblems (Both Online test & Technical Interview).
- Practice 2 to 3 coding questionsregularly.
- Create a resume that must be well-aligned to the companyand a good self-intro.
- Don't specify anything in your resume that you don't know.
- Be confident, have a smile on your face, and maintain eye contact throughout the interview.
- Try to explain any question asked in the interview with an example as far as possible.
- Try to ask questions at the end of the interview. It will show that you are interested in that company.
- Have a high level of patiencethroughout the placement process.

JUST TELL YOURSELF "YOUR TIME WILL COME" AND TRUST THE WAY IT GOES

R Mithra - linkedin

Role: Engineering Management Trainee
There were 5 rounds: two online interviews, an assessment test, a face-to-face interview, and an HR interview.

ROUND 1: Technical Interview 1
Duration - 15 minutes
Mode - Online

The interview began with a self-introduction where I mentioned my strengths, interests, achievements, and the reason why I chose to apply for the company. Since I spoke about sustainability, the interviewer followed up with questions related to it. He asked me a few questions related to my projects as well. He also tested my knowledge on the role I was being hired for. They asked a few basic technical questions from the electrical domain. Finally, he asked me if I had any questions and also asked if I was ready to relocate. The results were announced the next day.

ROUND 2: Technical Interview 2
Duration - 15 minutes
Mode - Online

This interview was entirely based on my resume. I was asked to explain my projects. There were a few follow-up questions. Then the interviewer asked what my favorite subject was and how it was related to my projects. He asked questions about that subject and checked my understanding on it. The follow-up questions were about the electrical safety in our homes. He asked about the circuit breakers used, the lightning protection system, and the leakage current detectors. I was asked about the history of ITC Hotels. There were questions about the need for engineering in the hospitality sector. I was asked to mention my family background as well. The results were announced later that day.

ROUND 3: Online Assessment
Duration - 2 hours
Mode - Online
There were 10 sections. The questions were from the following domains: -

- Core domain
- Reading Comprehension
- Communication Skills
- Listening ability

- Vocabulary
- Grammar
- Tenses
- Quantitative Aptitude
- Logical Reasoning
- Data Interpretation

The test will go in order. You will be allowed to move to the next section only after completing the previous section. You can not access the previous section once it is over. You will be monitored over the web camera.

ROUND 4: Technical Interview 3
Duration - 15 minutes
Mode - Offline

I was asked to attend this interview in Gurugram. They provided me with food and accommodation. They also reimbursed a part of my flight tickets. Before the interview, the head of the technical team gave us a brief overview of the interview. Then they gave a tour of the entire building called the ITC Green Centre and explained all the components in it. The interview was scheduled in the afternoon. There was a panel of members. They asked me to introduce myself. They asked questions about transformers and the electricity bills.

I was also asked a few general questions like:
- Why a hospitality company rather than a manufacturing one?
- Where do I see myself in 10 years?
- What is my favorite ITC product?
- How will I manage being in North India if I don't know Hindi?

ROUND 5: HR Interview
Duration - 10 minutes
Mode - Offline

It began with a self-introduction. Then they asked me about my family background and if I was ready to relocate. He asked about my hobbies and then explained about the CTC. They mainly tested my communication skills and how I approached their questions. He also mentioned a few of the employee benefits. Before joining the company, they will schedule a day at the nearest ITC hotel to visit and explore. After this, they will do a background check and will mail you to do a health checkup. Then they will give the offer letter.

Round 1: Online Test
Date: 28th November 2024

This round consisted of three sections:

1. Psychometric Test

- No of Questions: 15
- Duration: 15 minutes
- Purpose: To assess personality traits, attitude, and managerial capabilities.

2. Technical + Aptitude

No of Questions: 65
Duration: 75 minutes

I. Aptitude:

- Topics included percentages, ages,speed-distance-time, etc.
- Level: Easy to medium.
- Recommended Resources:
  For Concepts:Feel Free to Learn YouTube channel/website and test series.
  For practice:IndiaBix

II. Technical:

- Focus on electronics-related topics like NetworkTheory, Digital Electronics, Analog Electronics, and Static Timing Analysis.
- Questions emphasized problem-solving rather than theoretical knowledge.
- Level: Easy to Medium
- Key Areas: Understanding of fundamentals such as KVL, KCL, and basic Op-Amp circuits.

3. Coding Round

Duration: 30 minutes

Five coding problems:

- 3 easy, 1 medium,and 1 hard level.
- Programming language:Any of your choice.
- Note: A compiler wasn't provided; you had to type code directly into the description box. Syntax accuracywas critical, even if logic wasn't perfect.

Result:

- Out of 85 students,19 were shortlisted for the next round.

Round 2: Technical Interview
Date: 29th November 2024
Mode: Physical
Duration: 1 hour
This round was entirely technical and began with self-introduction.
Key Areas Covered:
I. Projects:

- Be thorough with your projects, especially if they involveembedded systems.
- Know the internal workings,datasheets, and circuitry of all components used.

II.Technical Knowledge:

- Digital Electronics and ComputerArchitecture:

a. Asked to draw the architecture of a microcontroller and explain the internal CPU components using examples.

b. Question: What does an N-bit processor signify?

- Electrical Circuits:

a. Solve a given circuitto find branchcurrents with step-by-step explanations.

- Power Electronics:

a. Explained the working of a boost converter and the role of each component in open and closed switch states.

- Semiconductor Physics:

a. Discussed the functioning of a P-channel MOSFET, including electron flow, channel formation, and current flow.

Note:

- Strong performance in the first round gives you a better chance to excel in the technical interview.

Round 3: Managerial + HR Interview
Date: 29th November 2024
Duration: 1hour
Mode: Physical
Key Aspects:
I. Critical Thinking and Problem Solving:

- Addressed real-life scenarios, such as:

a. Handling emergencies at home vs. work commitments.
b. Investigating theft without direct evidence or witnesses.
c. Dealing with a team member who steals an idea and presents it independently.

II. Behavioral Questions:

- Reasons to hire or not hire you.
- Explored family background, hobbies, and recent learnings from books.
- Tip: Mention hobbies you are genuinely interested in, as follow-up questions are detailed.

III.Company Overview:

- Provided insights into their roles (digital/analog electronics based on interest), growth prospects, and global opportunities.

Result:

- Out of 19 candidates, 1 student (from PSG iTech) was placed in Anora Instrumentation.

Lessons Learned:

1. **Preparation Matters:**

- **C Programming is a Must for Core Companies**
- For any core company related to electrical or electronics, **C programming is essential.** Karthik's notes are considered the bible for C language. Master everything he teaches and revise it as many times as possible. "It's always better to revise one book 10 times than 10 books once."
- **Learn Python as a Backup**
- In addition to C programming, learning **Python** is highly recommended, even if you're preparing for a hardware role. It can be a **lifesaver** to secure a placement in a software company if things don't go as planned or if only a few hardware companies visit your campus.

2. Focus on What You Can Control:

- Prepare thoroughly without worrying about external factors like eligibility, competition,peer pressure or interviewer mindset because these are the things which you have no control over,just focus on giving your best for every company you attend.

3. Stay Detached from Outcomes:

- Concentrate on the preparation process.
- Everyone progresses at their own pace—"Walk slowly but never backward."

"Self-Doubt kills more Dreams than failure ever will!!!"

NANDHAN B
Welkinrim Technology
Chennai

944198226
mapj5556@gmail.com
NANDHAN BALASUBRAMANIAN - linkedin

Role : Hardware Engineer
Round 1: Written test
Date : 17.12.2024
The first round was held at PSG College of Technology in D Block. It began with a company introduction through a pre-placement talk, followed by a written test. The questions for the test were displayed on the final slide of the presentation.
Questions:
1. Draw voltage divider circuit with example calculation (400Vdc into 5Vdc).
2. Draw a simple LED driving circuit from 230V ac supply with calculations.
3. ADC Calculation and types.
4. BLDC, PMDC difference with waveform and construction.
5. Mosfet types of losses and equations.
6. Mosfet Turn on/off characteristics with waveform.
7. Transistor turn on/off characteristics.
8. Current measurement techniques with circuit diagram.
9. Design a NOT gate with NPN and PNP transistor.
The questions were from basics and easy to work out.

Round 2: Technical Interview
Date : 17.12.2024
Panel 1 : Two members
Duration : 35 to 40 minutes

After two hours, the results were announced, and I was selected for the technical interview in
the first batch. The company divided the students into batches based on their marks in the first
round. I was the seventh person in the first batch. The second round focused entirely on technical questions, with no self-introduction required. The interviewer directly asked questions
from my resume, specifically about PCB design, as I had mentioned it under my technical skills.
I provided a detailed explanation of PCB design for about 8 to 10 minutes.

Following this, I was asked to explain any one circuit from my project. I chose to explain an
analog circuit (a shutdown circuit), which took me around 5 minutes.The next question was to
draw and explain the MOSFET switching on/off characteristics, which I explained within 5
minutes.

Afterward, the interviewer asked if I was strong in electrical machines. I responded that I was
confident in special machines and had an average understanding of electrical machines.This
led to questions on armature reaction, followed by the construction and working of BLDC and
PMSM motors, which I explained in about 10 minutes.
Finally, the interviewer inquired about my family background and confirmed my selection for the next round.
Know your project well, resume is important and after joining company i come to know they were in need of a PCB designer, so they selected me.

Round 3: HR Interview
Date : 18.12.2024
Panel 2 : Two members
Duration : One hour

During the HR round, the focus was mainly on personal and behavioral aspects. I was asked to introduce myself in a non-technical way, emphasizing my interests, hobbies, and
values. The discussion also included questions about my personal background, team role,
future goals and career aspirations.
1. Can you share some details about your family, including your parents and siblings?
2. Why did you choose engineering, specifically electrical engineering?
3. What made you choose PSG Institute of Technology and Applied Research?
4. What roles and responsibilities have you taken on in college?
5. What have you learned from these roles?
6. What challenges did you face while handling your responsibilities?
7. How did you overcome those challenges?
8. What extracurricular activities are you involved in?
9. What non-technical challenges did you encounter while working on your team project?

10. How did you approach and resolve those challenges?
11. Can you create a timetable to complete your project tasks within 24 hours?
12. What is your expected salary?
13. How long do you plan to stay with Welkinrim?
14. What are your expectations from Welkinrim?
15. Where do you see yourself in the next 10 to 15 years?
16. What are your career plans for the next 5 years?
17. What is your expected salary after 3 years?

Show genuine enthusiasm and eagerness to work with the company. Be honest and confident in your responses, as these qualities are the most important factors in making a positive impression.

Important notes:

- Research the company's needs and understand what they are looking for in a candidate.
- Gain a thorough understanding of the company, including its mission, values, and the

services or products it offers.

- Ensure your resume is clear, concise, and includes only the skills and experiences you

are confident about and well-versed in.

- Ask meaningful and insightful questions during the interview to demonstrate your

curiosity and interest in the company and the role, leaving a lasting impression.

- Visit the company's official website and LinkedIn page to stay updated on their latest

developments, culture, and job opportunities.

All the best for your future

NITHYA PRIYA M

7339161368

nithyapriya387@gmail.com

Nithya Priya - linkedin

As I reach the final stretch of my undergraduate journey, I find myself reflecting on the years that have quietly shaped me into the person I am today. My time at PSG Institute of Technology and Applied Research has been an experience marked by growth, discovery, and transformation—an experience that I will carry with me for a lifetime.

When I first walked into this institution, I was filled with anticipation and uncertainty. Today, I look back with a deep sense of fulfillment. College life, in its essence, is not defined solely by academic achievement. It is defined by the people we meet, the challenges we overcome, the ideas we exchange, and the values we build along the way. I consider myself fortunate to have been part of a community that encouraged both intellectual curiosity and personal integrity.

One of the most defining aspects of my academic journey has been the opportunity to step outside the conventional classroom experience. During my internship at MIT Chrompet, I was introduced to the practical applications of automation through an intensive, hands-on experience in PLC and HMI technologies. It was an environment that demanded precision, problem-solving, and adaptability—skills that extend far beyond technical knowledge and into every professional setting. The one-month tenure in a new city brought with it not just learning, but also friendships with peers from different colleges across the state. Those days, filled with exploration, teamwork, and shared curiosity, remain some of the most memorable and enriching experiences of my college life.

In addition to my internship, I was able to design and develop a non-invasive liquid level detector—a project that deepened my understanding of applied research and innovation. This endeavor required thorough investigation, experimentation, and critical analysis, pushing me to engage with technology not just as a student, but as a creator and a thinker. Seeing the project come to life was not just rewarding—it was a moment of quiet affirmation that effort, when sustained with intent, yields meaningful results.

However, my college experience has been shaped by much more than academics or projects. It is the late-night study sessions, the shared anxieties before exams, the countless discussions that turned into deep conversations, and the silent yet powerful support from peers and mentors that truly stand out. These moments, often overlooked, have taught me empathy, patience, and the value of authentic connection.

The culture at PSG iTech fosters independence and a sense of responsibility. As I prepare to move forward, I do so with clarity and determination. The future, with all its uncertainties, feels less daunting because of the strong foundation.
I have built here. I hope to continue learning, growing, and contributing meaningfully—whether in my professional pursuits or in the spaces I choose to inhabit personally.

To those who are still in the midst of their college journey, I offer this simple reflection: embrace every opportunity, however small it may seem. Be curious, stay grounded, and do not shy away from challenges. The growth you seek often lies just beyond the boundaries of comfort.

As I turn the page on this chapter of my life, I carry forward not just memories, but a mindset—a mindset shaped by discipline, openness, and the quiet determination to keep moving forward with purpose.

With sincere gratitude to my mentors, and institution—thank you for being part of this journey.

POOJA C

poojachandravasan@gmail.com
Pooja Chandravasan - linkedin

There were 5 rounds:

1. Online test
2. Group discussion
3. Written test
4. Technical Interview
5. HR

Online test:

There were 3 sections:

- Verbal reasoning
- Logical reasoning
- Quantitative aptitude

There were no technical questions. The level of difficulty for verbal and logical reasoning was easy. Quantitative aptitude was medium to difficult. Try answering all the questions.

The students were shortlisted based on CGPA and performance in the onlinetest. The results were announced only after the PPT.

Group discussion:

There will be 4 to 5 panel members and 9 candidates. A general topic will be given with a 5- minute preparation. They will not tell you the timings for the start and stop of the group
discussion, you should have your time calculation. The topic given to us was “ChatGPT: Enhancing or HinderingStudent Creativity?” Try to start or end the group discussion, do not give both. Speak for 2 to 3 times with points matching the topic. I was concluding the discussion, so
it was an added point for me.

This is an elimination round.

Among 27 candidates, only 9 to 10 candidates will be selected for the next round.

Written test:
This is also an elimination round.You will be given 10 basic electrical questions and within 15 minutes, you need to complete it. There were 2 different sets. Some of the questions are:

1. Difference between AC and DC
2. What is the power factor?Why is it important?
3. Define KCL
4. What is RMS value?
5. What is a diode?
6. How will current be distributed if resistors are connected parallelly?
7. How will voltage be distributed if resistors are connected in series?

For the other set, all the questions were from theorems, be clear in the definition of all theorems (Thevenin, Norton).
You will be able to answer all the questions for sure.

Technical interview :
There were 3 panel members and all of them were very friendly. Firstly, I was asked to introduce myself, when I came to deliver my project title, HR asked me to just tell more about myself, my hobbies, and others. They were impressed by my hobbies and asked more about it. Coming to the technical questions, they asked which project I liked the most, and why and then asked to explain it.

1. What is the unit of power factor?(**Watts**)
2. What is the power factor and why it is important?
3. Can you draw the diagram for 2 way switch?
4. He drew a voltage division circuit on paper, and asked me how to determine the voltage across a resistor, also asked me the name of the law.
5. What is load shedding? (I also told them that load shedding is done to prevent black outages, and panel members were impressed)
6. An aptitude question was asked(there Is only one torch and 4 members, if 2 members can cross a bridge at a time, what will be the minimum time taken)- they will just expect the logic from you, you can give a try, if not tell them that you are not sure.
7. What is PVSyst software and for what purpose it is used?

The interview lasted for only 20 min. If you have any solar-related projects and software used, it would be an added advantage. They asked me, from whom I heard the software. You should show your interest in the company and try to give your best!

This is also an elimination round.

HR round:
I was the only person to go for the HR round from electrical department. There were around 9- panel members, and it was a very friendly talk on whetherI am okay with relocation and others.

On the same day, results were announced, and I got placed in my dream company! I was also attending Technip on the same day and I got selected for Technip also.

Note: your resume shouldspeak first. Make your resumeprepared based on the companythat you are going. Give your answers confidently and convince them that their company is your dream company.

"Success in placements isn't about a single burstof effort—it's the result of consistent steps taken every day towards your goal. All the best!"

ipoonguzhali267@gmail.com
POONGUZHALI R -linkedin

ROUND-1: Technical Interview(18/01/2025)
ROUND-2: Technical + HR (20/01/2025)

There was no online test held HR directly contacted the shortlisted student through phone call. Shortlisting was done based on CGPA above 8.

ROUND-1:

The interview was done through phone call for about 20 minutes. The interviewer went through my resume and he started to ask questions from one of my projects which I have done. My project was based on IOT based smart waste management system (separating metallic and non-metallic waste)

1. Explain your project.
2. Why did you choose this project?
3. What kind of sensors you used?
4. What kind waste did it separates?
5. Purpose of inductive proximitysensors & IR sensors?
6. What is servo motor and its uses?
7. Instead of servo motor is there any other type of motors been used?
8. How will you separate other than metals line CU, Al, Si
9. If in case you are placing the waste in a conveyor belt for separation, if sensor senses it then how will u pick it up and what kind of mechanisms used?
10. How will you separate lightweight waste?
11. How will u separate oil and water?

Finally he asked me whether I am interested in development sector and what are the simulation tools you know and whether you are ready to learn AutoCAD and Solid Works.

TIPS: If the interviewer ask you whether you are ready to learn make them feel that you are a consistent and a quick learner.

ROUND-2:

Round 2 was done through video call for about 15 to 20 minutes. The interviewer went through my resume and he asked me to give a brief self-introduction. After my self-introduction he started to ask question

1. Did you google about our company?
2. What kind of company is this and what is it doing (manufacturing tap changers for transformer)
3. What is the purpose of tap changers?
4. Types of tap changersand where it used?
5. What is the rating of transformer and why it is rated in KVA?
6. Differentiate transmission and distribution station.
7. Components of substation.
8. Then he asked me to solve a problem, given that if you are connecting a DC battery to transformer and ratio of the transformer is given and current flowing through primary winding is given What will be the amount of current in secondary winding (dc cannot be connected to transformer)
9. Why we cannot connect DC supply to a transformer? Is there any alternative for connecting dc to primary winding of transformers (dc series motor can be connected)
10. How will you differentiate step-up and step-down process in a transformer
11. Transformer ratio and currentin primary windingis given then find emf induced in secondary
12. Finally, he asked me whether I am ready to relocateChennai
13. He asked how will u contributeto the company.

TIPS: Be strong while answering to the questions and the interviewer does not want an exact answer he just wanted to see how you approach to the question. Be strong in your electrical fundamentals and what you put in the resume.

Finally, within an hour I received a mail that I have been selected. Feel free to contact me if you have any doubts and queries.

ALL THE BEST FOR YOUR PLACEMENTS...!!!!!

PRADEEPA S
ELGI Electrical and Industries Limited
Coimbatore
Always Better.

8610950337
spradee17@gmail.com
Pradeepa S - linkedin

Interview Process:
Interview process of ELGI consists of 3 rounds,

- Written Test
- Group Discussion
- Technical + HR interview

Bond Details: 3years from the date of joining

Round 1: Written Test (Non-Technical)
The written test is fully non-technical and consists of Aptitude and General English,there were three sections and each section had 25 questions and time duration is about 1hr.
First section consists of **Quantitative Aptitude** and the questions were easy to moderate level, topics covered are

- Speed and Distance
- Boats and Stream
- Profit and Loss
- Simple & Compound Interest
- Time & Work
- Discount
- Probability
- Averages

Practice more and this is the base for clearing the first round,so take time and practice aptitude which will help to clear the first round. (Practice Regularly)
Second section is Reasoning Abilityand this sectionis quite easy and it requires logicalthinking and reasoning and the topics covered in this section were,

- Syllogism
- Blood relation
- Directions
- Seating Arrangemet
- Coding & Decoding
- Number and Alphanumeric Series
- Finding Odd one in the series

This section is very easy to solve and it will take less time to completeonce if all the topicsare clear.
Final section is to test the English knowledge, it is the General English section which consists of simple grammar topics like ,

- Tenses | Active & Passive Voice | Sentence completion

So, these are all the topics covered in first round written test.
After completing the test, they collected all the answer sheets and the question paper which was given to us and then they started to correct the answer sheets and we were waiting for the results. It took around more than 45mins to declare the result, then they called everyone to assemble in the seminar hall and then they started to announce the results, and I was selected for Next round.
Then he gave me some array programs and asked me to write code for the same using any online compiler. The questions were,

1. Spiral Traversal of a 2D matrix
2. Linked List creation
3. Rotate a 2D matrix by 90 degrees clockwise
4. Find the pair which adds up to give the target sum from a linear array This round lasted for around 1 hr 20 mins.

NOTE:

- The number of questions, type of questions, and duration of interview differed according to the panel.
- These types of questions can be found at **Leet Code or Geeks for Geeks.**

HR Interview:

The HR asked me about the workshop I have conducted at Yukta: and then asked me whether I knew in what areas Yantra Vision is currently working (just have a look at their website before attending the interview) he also explained to me some of the areas they are working on. Following that I asked him some questions about Yantra Vision.

The final results were announced on the day itself and I got placed at Yantra Vision with an Intern + FTE offer.

Tips:

- Karthi sir's class will be more helpful to clear coding problems (Both Online test & Technical Interview).
- Practice 2 to 3 coding questions regularly.
- Create a resume that must be well-aligned to the company and a good self-intro.
- Don't specify anything in your resume that you don't know.
- Be confident, have a smile on your face, and maintain eye contact throughout the interview.
- Try to explain any question asked in the interview with an example as far as possible.
- Try to ask questions at the end of the interview. It will show that you are interested in that company.
- Have a high level of patience throughout the placement process.

JUST TELL YOURSELF "YOUR TIME WILL COME" AND TRUST THE WAY IT GOES

PRADHIP A K
Siemens Energy
Gurugram

8610918500
akpradhip518@gmail.com
Pradhip A K - linkedin

About the company:
Siemens Energy India Limited (SEIL) is an Integrated energy soultions company. The company develops, produces, sells, and installs multi-megawatt wind turbines, gas turbines, gas engines, steam turbines and complete systems. It also involves in grid technology businesses such as FACTS, HVDC, SynCons, Grid access, and Electrification, digitalisation and Automation(EAD) of Oilrigs.

Round 1: (22/09/2024)
Online Test:
The test had 5 sections, total 70 questions and it was for about 1hour 20mins
Section A (10): Logical Reasoning, Verbal Reasoning
Section B (10): Non-Verbal Reasoning
Section C (10): Quantitative, Data Interpretation
Section D (10): Verbal Ability
Domain Ability (30): Technical Question

The Level of difficulty was easy-medium. For Aptitude you can learn from career ride and Feel free to learn (in 2x) YouTube channel and IndiaBix for practice. The technical questions were from Circuit analysis, machines, Power Electronics, Control system, MPC, Power systems.

Round 2: (07/08/2024)
Technical Interview

The Interview was conducted through online for me. I had two panel members. The interview went for about 35-40 minutes. The interviewer asked the questions based on my resume which have been shared to them via the placement portal. Firstly they asked about my project. After I explained about my project for 5 minutes, they asked how will I apply that to the real-world. In my case I am a part of the rover team. They asked questions such as what is my specific contribution to the project, how it can be applied to other problems than space?
What are the motors used robotic arm?
My resume is aligned more towards electronics, embedded systems and computer science. So the interviewers tried to test my skills in those domains.
They asked me questions like what are embedded systems?
What are their applications in the real world?
What are algorithms? and other basic CSE and ECE questions.

Next they tried to test my knowledge and awareness in basic electrical systems. They asked questions in the domains such as electrical machines, power electronics and basic power systems.They asked questions such difference between AC and DC systems, what are transformers, types of transformers, what are synchronous machines, what is reactive power etc., Whether I visited any substation? what are the components I can Identify in a substation.

Next they asked about the co-curricular activities I mentioned in my resume. They asked about the conference I attended, like what I found interesting in that, what I learned from there, etc., Finally they asked me like if it's okay for me to work in electrical core domain. And asked about my location preference.

Tips:
The company that is SEIL, is based of Gurugram, Delhi NCR. So they will mostly likely place you in Gurugram, there are other locations also like Pune, Bangalore, Chennai. But it is less chance that they will place you in other locations than Gurugram. So they will seriously care about your location preference and will expect you to be ready to work in Gurugram or any other locations they wish. Be strong in Basics and be clear of what you are speaking. Interviewers will mostly want you to feel comfortable while speaking with them. So showing a warm gesture that you are very much interested in the interview will help you a lot.

Round 3: (09/08/2024)
HR Interview:

Round 3 was Telephonic Interview. The interview went about 5-10 minutes. It started with my self-introduction. The HR asked questions like Why do you want to join siemens, Where do you stand in next 5 years. Are you ok with the location?

PRANESH P M
Aptiv Components

Total ROUNDS:4

ROUND: 1 MCQs and programming
Date: 06/11/24
Platform – Hacker Rank

The test consists of four sections with a total of 22 questions to be completed within 90 minutes. There is no specific time limit allocated to each section. No negative marking.

SECTION 1: Mini Coding / Snippet
Thissection consists of 5 codingsnippets where you need to trace the code and provide the correct answers. The coding snippets range from easy to moderate difficulty. and the snippets were mainly from C and C++ programming languages.

SECTION 2: MCQs(IT)
This section consisted of 5 questions. Questions were easy to Moderate. I managed to solve all the questions in 10 minutes. The question was asked from computer fundamental's which includes testing, OOPS concept.

SECTION 3: MCQs(Core)
This section consisted of 11 questions. Questions were easy. The questions included both theoretical and problem-based types. They covered topics from basic electronics, control systems, digital electronics, and included some aptitude questions.

SECTION 4: PROGRAMMING
One programming question to be solved in this section. Everyone will get different programming question and programming language choice is ours.Difficulty level is from easy to medium.

ROUND: 2 TECHNICAL INTERVIEW
DATE: 25/11/24
Platform – Microsoft Teams
Duration: 40 mins

The interview began with a self-introduction.
Asked Questions from my project and communication protocols that were involved in it.

Basic C questions regarding pointers, static, extern, volatile and where it is used.
Atlast , I was asked to program simple code to find factorial.

NOTES: Please note that each member had different panels and the questions and procedures were different to each one of us.Be strong in fundamental concepts like MPMC, Embedded System and Your area of interest.
The round was over and I was waiting for the result. I waited till 8pm, still no result so they(placement cell) asked me to come tomorrow.

ROUND: 3 TECHNO MANAGERIAL INTERVIEW
Date :26/11/2024
Duration: 30 mins

As per the name of the round,technical + managerial questions were asked.He asked to explain my project .He asked many questions about it and the managerial parts involved in it too like how many were involved , how did you assign separate role to each one, were there any conflicts etc.

ROUND: 4 HR INTERVIEW
Duration: 30 mins

The interview starts with Self Introduction.
The interviewer asked about my family background, location preferences and my role in the projects mentioned in the resume.

Then she asked some HR questions.

- Which way is better to complete a task: the easier way or the right way?
- Do you think motivation is important for success?
- You are working on a project in a team, and a discrepancy arises among teammates about the project idea. How would you resolve this issue.
-

Finally, she asked me if I had any question.

Make sure you ask a very good question here. Plan the question you would ask before the interview and attend.

PRINCE JACOB S
Hewlett Packard Enterprise
Banglore

Hewlett Packard Enterprise

Prince Jacob S -linkedin

1.09.2024
Round 1: OnlineTest

There were three sections in this:

1. Aptitude: Questions from time and work, speed-distance mixtures etc. The Level was **Moderate**.
2. Technical: Therewere wide range of topics asked like OS, DBMS, OOPS, Computer Networks, AI-ML, Cloud etc.
3. Coding: There were 2 questions. Question1 was EASY it was based on array and heaps. Question 2 was HARD it was based on graph (Dijkstra Algorithm)

Nearly 140 people attended the test and they shortlisted 13 students.

16.09.2024
Round 2: Technical Interview

1. No self intro
2. Talked about SIH briefly and how the judging was.
3. Asked about my projects
4. Difference between compiler and interpreter
5. C and Python Compilation Process
6. How the program execution speed is determined? (Time Complexity) (Asked me to explain like it to a 10th standard student)
7. Asked about my hobbies and my greatest weakness
8. He asked about SQL API
9. How the Python Program is executed on basis of OS Concepts
10. Asked my favorite programming language (Python)

A very simple code which must print (last, first) name when input of your name is given (Ex: Prince Jacob is the input and the output is Jacob Prince)

11. He asked myself to rate my knowledge in computer networks out of 5
12. I replied that I know the basics and explained about OSI and TCP/IP layers for 5-7 mins.
13. At last he said to improve my knowledge in computer networks so that you can learn new technologies.
14. I asked questions about the company.

There were nearly 43 students for the interview,30 students are from Kumaraguru, After First They eliminated about 10 candidates.

Round 3: Managerial Interview :

1. He asked to introduce about myself
2. Differnce between Microcontroller and Microprocessor
3. You are from EEE How can you contribute to the company?
4. Gave explanation about all of my projects and intern
5. Didnt get any technical questions, He expected clear idea from me.
6. He asked my greatest strength and weakness.
7. He gave me a managerial situation i.e. where people had different opinions about a project how would you approach the situation
8. He asked me How OOPS and API helps you in programming.
9. He asked me what would you do in leisure time.
10. Finally I asked questionsto him

After this round nearly8 candidates were eliminated.

Round 4: HR Interview:

1. He asked about my schoolings and native place.
2. Asked about parents'background
3. Why HPE?
4. What is your daily motivation?
5. Long term plans
6. Asked about my intern and how did it go?
7. At last I asked 2-3 questions to him

Completed HR by 2pm and waited till 7:30 pm for results. I was selected for intern + FTE.

All the Best!!

STAY STRONG.
BE BRAVE.

PRIYA K
Oracle India Pvt. Ltd
Hyderabad

9500721451
priyakarthikeyan422@gmail.com
PRIYA K - linkedin

Role: Associate Software Developer/Engineer
Oracle visited our campus during the month of August 2024.
Round 1 - Online Test (1 hour 40 min):
The first round was an online test which comprised of 1 Programming question and about 30 MCQs which are from DBMS, SQL, Computer Networks, Rest API, Operating Systems, Output
prediction, Data structures and Algorithms. One or two questions were based on Oracle's recent version and their cloud interface. It also included Aptitude and puzzle questions. Roughly half of the 30 were Aptitude and puzzle questions and the rest were Technical.
24 candidates were shortlisted for the next round.

Round 2 - Technical interview 1(50 min):
In the beginning itself, I was asked to solve a coding problem. I was given three strings a, b and c and the task is to find the position of b in a and to replace it with c. I solved it in about five minutes and the interviewer asked me to take an example and iterate through the code. Next, I had put Database management systems and OOPS in my areas of interest. Hence the interviewer
asked me some questions from DBMS.

- Explain about 3NF
- Give a real time example for Transitive dependency
- What is the use of REFERENCES keyword
- What are commands in DDL and DML
- What is RDBMS
- Why RDBMS
- He named some database management systems and asked my idea about it
- What is the recent version of oracle DB
- What is self-referential table

Then he asked me to write a self-referential table and to write a query for the same. Then he asked to swap two numbers without using a temporary variable and asked to explain how it is being swapped. Then he asked me to write a code for finding factorial of a number. I wrote two approaches and explained both. Then he asked me to write a code to find whether a string is palindrome or not and asked me to explain by traversing it with an example. Then he gave me a puzzle which is we have a 3L mug, a 5L mug and unlimited water. We have to fetch 3L using them.Then he asked another puzzle which was, we have a pond which has a lotus in the middle of it. It grows twice the size of it each day.If it takes 17 days to reach half of the pond, when it fill the whole pond.17 candidates were shortlisted for the next round.

Round 3 - Technical interview 2(30 min):
The answers from the previous round were attached with my resume and given to the interviewer. He skimmed through it and then asked me if I knew java (I mentioned only C++, Python and C in my resume). As I knew Java I said yes and then he started asking questions related to oops. He asked me to write an example for method overloading and to explain it. Then he asked me a puzzle, that I have three bulbs in a room and three switches outside the room. I can visit the room only once and while visiting I am allowed to turn ON only one switch. Then he asked me to write an example for method overriding. While explaining he asked some cross questions like can I be able to call the method in parent class using child object (You can do this in C++ but not in Java). Then he asked me about exception handling. After I explained it, he asked me to write the code for the same. Then he asked me to catch the error and print it on the console. He asked about the difference between UI and Interface. 10 candidates were
shortlisted for the next round.

Round 4 - Technical + Managerial Interview (50 min):
In this round I was asked about the programming languages | knew. Then she asked me to explain my projects. Some of the other questions were,

- Explain about debugging
- Explain about testing and what are the various software available for testing
- What is machine learning
- What is the difference between artificial Intelligence and machine learning
- What is Object oriented programming and explain about its features

Then she asked me about which are the various DBs I am familiar with. I was familiar with MySQL and Postgres. 5 candidates were shortlisted for the next round.

Round 5 - Managerial interview (30 min):
This round is conducted specially for two candidates, and I was one of them. It was like a short talk with the Director of AI&ML department of Oracle. He asked me about my strengths and
weakness and then asked me two puzzles. One of them is same as round 1, which is we have a 3L mug, a 5L mug and unlimited water. We have to fetch 3L using them. But with a twist, we can't waste the water. Another one was, we have two threads of different lengths. If we burn them, each of them takes 60 min to completely burn. How can you measure 45 min with these. Then I asked about his role in the company which he explained in detail.

Round 6 - HR interview (20 min):
In the last round, he started by asking me whether I had any questions. I asked many questions about his experience, life at oracle and some questions from the preplacement talk. He had no questions for me.

The results were out in an hour and 4 candidates (Tech+iTech) were selected for Intern + FTE role in Oracle and I am one of them.

SAHITHYA R

Sahithya R - linkedin

The shortlist was made before the 1st round, and student with a CGPA of 8.75 or higher were selected. The written exam, group discussion, technical and HR interview were all completed on the same day. Students from CIT, PSG Tech and iTech competed in this drive process.

ROUND 1 – WRITTEN EXAM:

We were allowed to bring calculator and were given question paper along with OMR sheet.

- A total of 60 questions were given, of which 10 were on general knowledge and the remaining were related to electrical.
- The exam had a time duration of 1 hour.
- The majority of the electrical questions covered topics such as electrical machines, circuit theory, and some basic questions on power system analysis and transmission and distribution.

The result of the 1st round was announced within an hour.

TIPS: Study the electrical basics thoroughly and go through some general questions.

ROUND 2 - GROUP DISCUSSION:

Each department was assigned to its respective panel, with each panel consisting of 10 to 12 members.

- The group discussion was conducted for 15 minutes, with 10 minutes allocated for the discussion and 5 minutes for the conclusion.
- The topic was on the lifestyle and attitude of Gen z and Gen x.
- No preparation time was given.
- Marks were given based on fluency, the quality of point made, and our overall attitude.

The result was announced within 15 minutes.

TIPS: We should provide at least 2 to 3 points, speak fluently and make your point clear, Avoid fumbling. Be knowledgeable and stay updated on current events.

ROUND 3 – TECHNICAL AND HR INTERVIEW:

In this round, both behavioral and technical questions based on the resume were asked. The interview was conducted for 45 minutes. Each department were sent to their respective panel and only electrical related questions were asked in the EEE panel.

- Tell about your family.
- Tell about your hobbies and questions were asked based on the answer.
- Where have you done your internship?
- What is the company working on?
- What did you learn there?
- What is the rating for the induction motor used in the pump at our house?
- Have you been to substation?
- Some questions from the written exam were asked to explain.
- Explain about transformer.
- What are the mechanical parts in a transformer?
- What is the purpose of a conservator?
- What is the gel used in the breather?
- What is the color of the gel and what color does it turn when contaminated?
- What are the types of circuit breakers that are commonly used?
- Where are vacuum and SF6 circuit breaker used?
- In what way SF6 circuit breaker is efficient?
- Why can't we use SF6 circuit breaker for low voltage applications?
- What is the purpose of air circuit breaker?
- Why can't it be used for very high voltage application?
- Do you know to work with ETAP
- What are the modules you learnt on ETAP?
- Major problem faced in air circuit breaker.
- Questions were asked about the projects mentioned in the resume
- Questions were also asked regarding the insulations used in machines.
- What will you be working on for your final year project?
- Do you have any questions.

The result of the 3rd round was announced after a week.

TIPS:

Be confident with your resume and ensure you have thorough understanding of your projects and areas of interest. Spend more time on area of interest and project rather than dumping every subjects. Instead of saying "No Questions" ask some relevant questions to the interviewer like their ongoing project, their growth and development etc.

The company is energy-based, so it's important to have a strong electrical resume, including a focus on electrical machines, protection and switchgear and electrical related projects and ETAP.

My Journey as an EEE Student

My journey through college has been a blend of academics with an Honors Specialization in Electric Vehicles. innovation, and active participation, which has shaped me into a more skilled and confident individual, ready to step into the engineering world.

From the beginning, I have always been keen on exploring real-world applications of the concepts we learn in class. During my second year, I had the opportunity to work on a project titled “IoT-Based Health Monitoring System for Primary Health Care Centres.” This project aimed at providing efficient and remote health tracking solutions, especially in rural and underserved areas. I’m proud to share that our work was well-received, and we were awarded the Third Prize in our college’s Project Expo. This recognition greatly encouraged me to take on more challenging projects.
With a growing interest in sustainable technologies and electric mobility, I delved into the field of power electronics and energy systems. My passion led me to design and develop a Bidirectional Converter for Vehicle-to-Grid (V2G) and Grid-to-Vehicle (G2V) applications, a project that focuses on the integration of electric vehicles with the power grid to support energy exchange and grid stability. This project not only won us the Second Prize in the Project Design Contest, but also gave me the platform to present my work at an IEEE Technically Sponsored International Conference, which was a significant milestone in my academic journey. Presenting our research at such a prestigious venue was both an honor and a learning experience, as it allowed me to interact with professionals and researchers from around the globe.

Beyond academics and projects, I have also been an active member of the National Service Scheme (NSS). Through NSS, I participated in various community development programs, cleanliness drives, awareness campaigns, and social outreach activities. These experiences helped me grow as a responsible citizen and a team player. I thoroughly enjoyed being part of initiatives that made a small but meaningful difference in people’s lives. My participation in NSS activities has truly instilled in me a sense of service and social responsibility.

Looking back, my time in college has been both enriching and transformative. From building innovative projects to serving society and presenting technical papers, each step has taught me something valuable. I am grateful for the encouragement and opportunities provided by my department and faculty, and I look forward to applying these experiences in my professional career.

SASMITHA C R - linkedin

The interview process had 3 rounds. One online and 2 interviews. All three rounds were eliminatory.
ROUND 1: Online Test
Test duration: 3 hours

The test was divided into many sections. All the sections were MCQs. The sections were Aptitude, Programming questions, electrical and electronics questions and personality related
questions. Each section had time limits. Every section had around 10-15 questions.

Aptitude questions were from number systems, time and work, profit and loss and logical
reasoning. This will be further divided into sub sections with limited time and each sub section
will have around 10 questions.

For programming section flow charts were given with blank block in which we have to choose
the appropriate choice from the given options according to the given question.
Electrical and electronics section focused on power electronics, Digital signal processing, digital
electronics, embedded systems and Linear Integrated circuits.

There will be violation score in this round. Make sure your complete face is visible during the test process. **Shortlisting was based on test score as well as the violation score.** Hence be careful during the test.

To clear this round be quick while answering the questions. Don't take more time in a single
question. Make sure you attend as many questions you can attend which will help you getting
more score in this round.

ROUND 2: Technical Interview (Face to Face Interview)
Duration: 25 mins

There were different panels according to different departments of the company.

I was interviewed for the After-marketing team. The interview started with self-introduction. Then the interviewer asked me to explain any one of my projects. I started explaining my project and he asked me to talk about technical and non-technical challenges that I faced during the project and how we resolved it.

As I was in the college rover team, he also asked questions regarding team challenges and how
we manage them. I was asked to tell a real time challenge I faced on the day of my interview and a solution for that problem. Be ready to answer such questions in the technical round itself.
At last, he asked me to shoot some questions to him. I asked a question to him regarding the
company. Then continuously he made me ask about 5 questions. So be ready with many questions so that you can be quick in the interview.

The flow of technical interview purely depends on the panel in which you are interviewed. Since
the panel member was from fault diagnosis team, the questions were mostly regarding challenges faced and their solutions.

ROUND 3: HR Interview
Duration: 20 mins

In this round I was asked questions regarding personality and attitude.

- Family background
- Do you think doing masters is necessary?
- Why did you choose electrical and electronics engineering?
- What do you know about ADAS?
- Tell me two features that impress you in commercial vehicles
- Do you drive? I said yes, so she asked me to tell two good and bad features about your car.
- Why do you want to join UD trucks?

UD trucks interview process is easy to crack if you clear the 1st round. Be clear with core subjects and be honest throughout the interview process.

Senthamizh Selvi - linkedin

Round 1: Online MCQ Test
Date: 20 September 2024
Duration: 1 hour
Structure: 60 questions (20 aptitude + 40 technical)
Criteria: Screening based on CGPA

Aptitude Section (20 Questions):
Quantitative Topics:
1. Speed, Distance, and Time
2. Problems on Trains
3. Boats and Streams
4. Time and Work
5. Pipes and Cistern
6. Percentages
7. Profit and Loss
8. Probability
9. Permutation & Combination
10. Trigonometry

Logical Reasoning Topics:
1. Blood Relations
2. Problems on Age
3. Directions
4. Syllogism
5. Data Interpretation

Verbal Topics:
1. Grammar(Articles, Active voice & passive voice, direct and indirect speech, spot the error.)
2. Reading Comprehension

Preparation Resources:
- Feel Free to Learn (structured videos) https://feelfreetolearn.com/
- CareerRide
- Practice platforms: IndiaBix

Difficulty Level: Easy to Moderate
Tips: Time management is crucial; focus on accuracy while maintaining speed.

Technical Section (40 Questions):
Core Subjects Covered:

- **ECA:** KVL, KCL, Theorems
- **Electrical Machines**
- **Control Systems**
- **DLC**
- **EDC**
- **Embedded Systems**
- **Power Systems:** Protection and Switchgears, PSA, PSOC

Preparation Focus:

- Understand concepts thoroughly
- Memorize key formulas and their applications

Difficulty Level: Easy to Moderate
Tips: A clear understanding of basic core concepts is key to clear this round.
Since the question sets varied for each candidate, focusing on general aptitude and solid understanding of the fundamentals of electrical and electronic engineering was key to success.
Result Announcement: 20 September 2024

Round 2: Interview Process
Date: 23 September 2024
Technical Interview:
Panel: Embedded Systems
Before technical interview there is group discussion ,due to time constraints it is cancelled for us so prepare for gd also.

Questions:
1. Tell us about yourself
2. What programming languages do you know? Rate yourself. (Response: C programming and Python; questions followed on C programming.)
3. Difference between C and Embedded C
4. Data types: Bytes, word, nibble and bits used for storage
5. How does the compiler distinguish between float, integer and double? 6. Difference between static and dynamic memory allocation
7. Dynamic memory allocation: malloc and calloc
8. Union vs. Structure
9. Storage classes
10. Problems to write programs:

- Code related to list and strings
- Code for delay program
- Code for storage class

11. Difference between for loop, while loop, and do-while loop
12. Difference between break and continue
13. When is the switch case used?
14. What is an ISR routine?
15. What is an embedded system?
16. Write a code to turn an LED on and off on specific time interval
17. Why we are using embedded c programming language
18. Detail explanation of project
19. Block diagram, program flow, and storage class used
20. Reason for selecting specific storage class and its implications
21. Take any sensor used in the project: explain elements inside, working with a graph
22. Sensors suitable for industrial purposes
23. Detailed explanation of ultrasonic sensor with graph
24. Microcontroller details

Tips:

- Prepare your projects thoroughly.
- Detailed understanding on your areas of interest
- Practicing common programming concepts and syntax, Karthik sir notes, is more than enough to answer.

Round 3: HR interview
Date: 23 September 2024

1. Tell me about yourself without technical details.
2. Demonstrate your leadership skills.
3. Why Renault Nissan Technology & Business Centre India?
4. Are you comfortable with a bond?

Tips:

- Research the company and its values to answer HR questions confidently.
- Highlight leadership experiences and adaptability.
- Answering every question wisely is important, they only test your soft skills.

Result Announcement: 4th November 2024, it's a long wait because its pool placement

General Preparation Tips

- **Resume Preparation:** Ensure your resume aligns with the company's work. Highlight interests and experiences that match their requirements.
- **Aptitude Preparation:** Focus on the topics mentioned above.Start preparing early and focus on the aptitude section. Practice a large number of questions on the above topics to ensure accuracy and speed.
- **Technical MCQs:** Study class notes for deeper understanding, go for books and practice online technical questions. Understand each concept thoroughly.

- **Group Discussion:** Practice different formats (debate, topic discussion, etc.). Be concise, support your points, and encourage others to participate. Present valid and well-supported points. Disagree respectfully to showcase critical thinking, Maintain your stance and avoid wavering, Speak concisely and encourage others to participate, Impressing the panel members is the key to success.
- **Interview Preparation:** Prepare a 2-minute self-introduction and projects. Be ready to explain every detail in your resume and your areas of interest. Your resume is your question paper; be prepared to discuss every detail in it. Have a detailed understanding of your areas of interest, as questions are often application-oriented so understand the practical applications of concepts in your AOI.
- **Soft Skills/ Hobbies:** Be ready with examples to demonstrate your abilities.
- **Time management, clarity, and confidence** are key to success in every round.

“வாகை சூட வாழ்த்துகள்!”

SHRI DHARANESH N S
TATA Electronics
Hosur

9786583450
shridharaneshnarayanasamy@gmail.com
Shri Dharanesh Narayanasamy
linkedin

Role: Graduate Engineering Trainee (GET)
Round 1: Online Assessment
The first round was conducted at PSG Tech ECE Lab on 7 th July 2024 at 9.30 am. The test was conducted online, and difficulty level ranged from basic to moderate. The test had 50 questions to be completed in 60 mins with no negative marking.

Date: 7th May 2025
Round 1 Test Sections:
This round consisted of two sections:
1. Aptitude:
Topics included ratios, percentages, ages, speed-distance-time, etc.
Level: Easy to medium.
Recommended Resources:

- For Concepts: Feel Free to Learn YouTube channel/website and test series.
- For practice: IndiaBix, Career ride

2. Technical:

- Focus on electronics-related topics like Network Theory, Digital Electronics, Analog Electronics, and Static Timing Analysis.
- Questions emphasized problem-solving rather than theoretical knowledge.
- Level: Easy to Medium
- Key Areas: Understanding of fundamentals such as KVL, KCL, and basic Op- Amp circuits

Round 2: Technical and HR Interview
Date: 8th May 2025
Mode: Virtual
Duration: 30 minutes

1. The interview started with a self-introduction, where I briefly spoke about myself, my background, education, and interests.
2. I was then asked about my family background, which gave the panel an ideaof my upbringing and values.
3. A major part of the discussion focused on my academic projects, especiallyoneparticular project I had highlighted in my resume.
4. I explained:

- The main objective of the project
- How I implemented it

- The components and tools I used
- My specific role and the challenges I overcame during the process

5. The interviewers then asked me some **technical questions related to electronics**, including: Basic concepts of **capacitors and resistors**

- How they work and where I had applied them in my project 6. I was also asked about my **flexibility for work**, including:
- Whether I am comfortable **working in shifts**
- If I am open to **relocation**

Toward the end of the interview, I was given an opportunity to ask questions, and inquired about the interviewer's current role at Tata Electronics. He provided an in-depth response and valuable insights into the company operations. Then I asked the interviewer. **How does success look like, especially in this role and company?** The interviewers smiled at my question and responded positively, appreciating my interest in understanding the company's expectations and growth path.

Overall, I found the interview to be well-balanced, covering personal background, technical skills, and my adaptability to the job requirements.

Important Insights:

1. Utilize LinkedIn to understand the interviewers expertise and frame your responses accordingly in case of virtual interview.
2. Focus on your domain-specific topics and stay thorough with project details.
3. Expect scenario-based questions that test practical applications.
4. Whether technical or HR, honesty and confidence in your responses matter the most.
5. Ask Meaningful Questions, showing curiosity about the company and role leaves a lasting impression.

ALL THE BEST

SIBHIGANTH B
QuEST Global
Banglore

93631033991
sibhi30@gmail.com
Sibhiganth B - linkedin

ROUND 1- ONLINE ROUND:

These round consists of 4 different sections.

1. Technical
2. Logical
3. Numerical
4. English

The first round was just to evaluate us and suggest some ideas. Candidates were shortlisted based on the technical and their aptitude skills. The technical questions were mainly focused on

1. Electrical Machines
2. Power Systems
3. Transistors

ROUND 2- TECHNICAL INTERVIEW (30 to 45 Minutes) :

The technical interview was around 30 to 45 minutes and from the start they asked the projects that were been completed fully and some ongoing projects and were project were been discussed for 10 minutes and after the project we had entered into the technical session and this technical session were been focused on all electrical subjects from the basics to the medium level and after that we had entered in our area of interest which comprises of electrical machines and protection and switchgear. The technical interview mainly focused on these subjects,

1. Electrical Machines (Mainly Transformers , Motors and Generators)
2. Power Systems
3. Power Electronics (Mainly Transistors)

The interview also consists of some real time applications like EV Battery Management Systems and from the household applications and working of hybrid vehicles and some other relatable topics. The questions are like

1. construction and working of a transformer
2. types of FET devices and tell about the brief description on transistors
3. difference between AC and DC machines
4. What are the types of circuit breakers that are commonly used
5. Questions were asked about the projects mentioned in the resume
6. Questions were also asked regarding the insulations used in machines.
7. What is hysteresis and eddy current loss.

ROUND 3- HR INTERVIEW (15 to 30 Minutes) :

Started with an Self Introduction and then about out strength and weakness , were you can apply your strength and how would you overcome your weakness , were you can see yourself in the 5 years and some questions like tell about the company and why did you need to work in this company and after the HR Interview based on the performance in the technical and HR they will consider the both for the evaluations and the result will be announced.

After this the result were been announced after 10 to 15 days and I got offered with a FT as a GET (Graduate Engineer Trainee).

TIPS AND INSTRUCTIONS :
For the Aptitude and English :

Practice and solve more number of questions and focus more on the topics Time and Work, Time-speed-distance, Trains, boats upstream downstream, Probability, Permutation and Combination, Profit and Loss, Simple Interest, Compound Interest and Number System.

Section involves questions from reading Comprehension, Bar Charts, Pie Charts, Synonyms and antonyms.

For the Technical and HR round,
You must have a proper understanding of basic topics from the core subjects you have learned so far.

Be confident with your resume and ensure you have thorough understanding of your projects and areas of interest. Spend more time on area of interest and project rather than dumping every subjects. Instead of saying “No Questions” ask some relevant questions to the interviewer like their ongoing project, their growth and development.

Your resume should speak first. Make your resume prepared based on the company that you are going. Give your answers confidently and convince them that their company is the right place for your knowledge and skills that they were been wanting from a person.

Have a proper outlook, positive attitude, gentle smile with confidence. Confidence is the key even if you are not ,pretend that you are. You have to be thorough in all the things happened in your project, it is better if you remember like a story.

“ SUCCESS WILL COME FROM A THOUSAND DEFEAT, SO TRY UNTIL YOU GET THE ONE YOU WANT”

SRINIDHI S
UD Trucks
Banglore

9443939409
sjs.srinidhi@gmail.com
Srinidhi S - linkedin

Company overview :

UD Trucks is a Japanese commercial vehicle solutions provider offering heavy, medium and light-duty trucks along with operational and financial services. Known for innovation, it supports smart logistics to build a smarter society. Headquartered in Japan, it operates globally in regions like Southeast Asia, India, and South America.

Round 1: Online Test

Date: November 28, 2024

Duration: Approximately 3 hours and each section were to be completed within stipulated time.

The online test was comprehensive and covered various technical and reasoning skills. Proxy checking was strictly enforced, ensuring the authenticity of the candidates**(main criteria for selection)**

Test Structure:

1. **Aptitude & Logical:** The aptitude section focused on applying general knowledge rather than conventional topics like trains, work and time that are typically covered in standard preparation. It required practical thinking and a good understanding of everyday concepts.
2. **Flowchart Completion:** Filling in missing parts of flowcharts to test logical reasoning and process understanding.
3. **Technical Section:** Questions focused on the basics of electronics including power electronics (problems+theory), Analog electronics, Digital signal processing and microprocessor & controllers.
4. **Behavioural and Reasoning Sections:** Evaluated patience, consistency, and logical thinking.

Difficulty Level: Moderate to difficult.

Key Tips:

- Be prepared for a long test, and stay patient throughout.
- Manage your time efficiently to attempt all sections.
- If there are sections you are unsure about, attempt to answer them to the best of your ability and move forward.

Round 2: Technical Interview

Date: December 4, 2024

Duration: 25 to 30 minutes

This round assessed my academic knowledge, project experience, and problem solving skills.

Questions:

1. A brief self-introduction
2. My project was on autonomous cars and that was asked to explain in depth with some technical questions related to it
3. Example for problem solving and what was your part in it?
4. What are the challenges faced in working on this project and how did u resolve them?
5. What do you like the most about our company?
6. Which one do you prefer designing or embedded?

Key Tips:

- Be confident in explaining your projects and technical concepts.
- Focus on providing clear, logical answers.
- Try to ask questions to interviewer

Round 3: HR Interview

Date: December 4, 2024

Duration: 10 to 15 minutes

This round focused on personal traits, adaptability, and cultural fit for the company.

Key Questions:

1. Describe yourself in one adjective and explain why.
2. Tell me about your family background.
3. Why UD Trucks and why not higher studies?
4. What do you expect in terms of work-life balance?
5. How do you see yourself contributing to the company?
6. Full form for ADAS
7. What are the day-to-day automated technologies that you see?
8. What if your not selected for this company?

Key Tips:

- Be honest and good fluency in English is a must.
- Make sure to convey that you're highly adaptable and eager to learn. · Try to highlight your team working skills whenever you get a chance.

The results were announced on the same day. I was thrilled to be selected for the role, marking a significant milestone in my journey with a reputed company like UD Trucks.

General Observations and Lessons Learned

1. Understand the company profile and revise core technical concepts.
2. Even if you don’t know an answer, approach it logically and calmly.
3. Smile, stay kind, and be consistent in your responses.
4. Have some points to tell that your more efficient than other candidates

If you need any guidance or have questions about preparing for interviews, don't hesitate to get in touch. Wishing you all the best as you embark on your own career journey!

SRINIVASAVI K
Yantra Vision
Banglore

9943457581
vasavikannan2004@gmail.com
Srinivasavi K - linkedin

Job role: Internship + Full time (Sales and Marketing Trainee)

About YantraVision

Founded in 2015, YantraVision is a high-speed Machine Vision product and solution company. Their Vision Processing Module, Falcon Compute, is a hardware platform (Embedded/Linux systems) bundled with algorithms. Falcon compute can be customized to build solutions for Industrial, Defence and Aerospace applications

My Interview Experience

The shortlist for the first round was based on an application form that required candidates to answer the following questions:

- What is your career aspiration?
- Are you planning for a career in Management? If so, why?
- Write about the extracurricular (club/sports) activities you have been involved in.
- Do you have experience in organizing events? If so, write about your role, challenges faced, and experience.

To answer the application form effectively, it's important to be honest and highlight your soft skills, communication abilities, and management capabilities. Emphasize your experience in organizing and executing events while showcasing leadership and teamwork skills through extracurricular activities. For my responses, I shared my aspiration to pursue an MBA in the future and explained how gaining industry experience as a fresher would prepare me for it. I included a real-life example of managing a challenging situation by staying composed and working collaboratively, demonstrating problem-solving and teamwork. Additionally, I highlighted my involvement in extracurriculars, showcasing how it helped me develop key skills and a proactive attitude.

First Round: Online Test

The first round consisted of a comprehensive online test covering the following topics:

- General aptitude
- English paragraph comprehension
- Logical reasoning
- Data interpretation

This test had a single section with a time limit, making time management crucial. Although the questions were relatively easy, the common challenge was managing time effectively while solving each question.

Second Round: Online Interview

Candidates shortlisted from the first round moved to the second round, which was an online interview. As the role was for a Junior Sales Engineer, the focus was mainly on evaluating communication skills and thinking capabilities. The interview lasted about 15 to 20 minutes and included questions like:

- What do you know about sales and marketing?
- What are your five-year goals?
- Would you consider yourself an ambitious person?
- How do you handle stress in a work environment?
- Why do you think you are perfect for this role, and why should I hire you?

This round was primarily about assessing communication proficiency. Only a few candidates were selected for the final round.

Third Round: Final Interview

The final round was an online interview lasting 30 to 40 minutes. Shortlisted candidates received a mail asking them to prepare a PowerPoint presentation on two topics:

1. Industry Analysis (focused on the printing industry)
2. Sales Pitch (centered around the company's product)

We were advised not to use AI tools like ChatGPT for the presentation. Instead, the emphasis was on conducting independent research to create a professional and insightful presentation.

Industry Analysis

For this, I focused on:

- Industry statistics: Past growth, expected growth, estimated CAGR, number of printing presses in India, and types of printing presses.
- Industry segments: Packaging, label printing, publication, and commercial printing. • Top players: Key companies in the industry and their operations.
- Market dynamics: Current trends, customer behaviour, growth and declining areas, and identifying customer needs.
- Porter's Five Forces: A strategic analysis framework, similar to SWOT.
- Problem and solution: Identified industry problems and positioned the company's product as a solution.

Sales Pitch

For the sales pitch,

- I Presented a brief introduction to the product with a tagline.
- Highlighted the product's specifications and applications concisely.
- Emphasized the product's consistency, quality, and future potential in emerging technologies.

The aim was to convince customers to invest in the product by showcasing its value and applicability.

Preparation process:

- I watched YouTube videos and referred to various websites for tips on crafting a compelling sales pitch.
- The industry analysis required extensive research on trends, statistics, and frameworks like Porter's Five Forces.
- Since the role was a shift from core engineering to marketing, I explored and learned new concepts that were unfamiliar but exciting.

This role isn't usual hardware or software job we've been preparing up for over the past four years, it's more about stepping into the marketing field, which can feel pretty new at first. Honestly, I had to put in a lot of effort to research and create a solid, professional presentation. But I ended up loving the process! Learning something so different and getting out of my comfort zone was actually really exciting. If you're stepping into this kind of role, I hope this detailed interview experience helps you in your preparation.

ALL THE BEST!

"THE UNIVERSE HAS PERFECT TIMING—NEVER EARLY, NEVER LATE. IT TAKES A LITTLE PATIENCE AND FAITH."

STEPHEN VARMA M
ITC PPB Limited
Chennai

9629201846
stephenvarma68@gmail.com
Stephen Varma M - linkedin

Role : GET
Package: 7.9 LPA

Company Profile :
ITC's Packaging & Printing Business is the largest value-added converter of paperboard packaging in South Asia. It is one of the leading players in the global packaging ecosystem and is driven by Purposeful Innovation and deep Customer Centricity.

The interview consists of 3 rounds (No aptitude test was conducted)
Round 1 - Group discussion (case study: situation based)
Round 2 Technical interview
Round 3 HR interview

Group discussion:
The first round was a group discussion. Each group had 10 to 11 members in it. A situation was given, and our group discussion started. For us, if a flight you were traveling on was collapsed with a technical fault and crashed into a deep, dark forest, what are the things you will require? Certain things were given and said to be ordered by us.

Tip:
Regardless of who speaks first or last, ensure that each contribution is clear and distinctive. If someone is not engaging or participating enough, encourage them to share their thoughts by asking, "What do you think?" Avoid turning the discussion into a debate. The goal is to collaborate and share perspectives, not to argue or oppose each other.

Stick to your point with confidence, but present it in a way that reflects your unique perspective. Show yourself as someone who brings fresh insights to the conversation, and stand out by contributing thoughtfully and respectfully.

Technical interview:
From 41 members, 16 were shortlisted for round 2. It was a technical round. It was around 15 to 20 minutes. Since my area of interest is power electronics, the questions asked were related to this field:
1. Introduce yourself.
2. What is the difference between BJT, MOSFET, and IGBT?

3. Can you explain the concepts of reactive power, active power, and apparent power?
4. They asked me to explain one of my projects.
5. I was asked power systems-related questions.
6. I was asked about my family background.
7. They inquired whether I was comfortable with any location for the job.
The questions were based on the responses we had provided earlier in the interview.

HR interview:
It was a group interview. Initially, they asked us about our family, such as our father's profession, mother's profession, and details about our siblings. Then, each member was pointed out and asked to tell about the other person's parents' professions, to cross-check whether the information we provided was accurate. (So, it's important to stay attentive)
Some of the questions they asked were:

1. Tell us about your schooling.
2. Why did you choose engineering?
3. Why did you choose electrical engineering?
4. They asked about my project.
5. Which type of work do you prefer-white-collar or blue-collar?

Tips:
Be confident and speak clearly. Don't worry about rejection. If you don't know the answer to a question, be honest and admit it. But don't do this for every question. Always be prepared for the next round. You might be given a topic on the spot, and they will let you know if only the HR round remains, or if another technical round is scheduled. Be ready for both.

Try to have a good conversation with the panel members and ask them questions. The most important thing during the interview is how they evaluate your behavior and attitude. Be respectful and answer thoughtfully.

"Keep working hard, stay consistent, and believe-your time will come soon."
ALL THE BEST

SUBASHREE R
Quantiphi Analytics
Thiruvananthapuram

9080740937
rsubashree2004@gmail.com
SUBASHREE R - linkedin

Quantiphi Analytics had 4 rounds for the hiring process.
1. Online test
2. Technical Interview (Virtual)
3. Techno- Managerial Round (physical)
4. HR Round (physical)

ONLINE TEST :
The first round was an online test conducted in unstop platform, consisting of 76 questions comprising of aptitude, verbal and 2 coding questions. The aptitude questions ranged from easy to moderate and coding questions were of basic difficulty.If you perform well in aptitude, you will be shortlisted for machine learning role. I cleared this round and was shortlisted for the next round.

TECHNICAL INTERVIEW (VIRTUAL):
The interview took place on unstop platform and the interviewer was friendly and open to communication. The interview started with an introduction, in which I added about my recent hackathon-winning experience. So, the interviewer asked about the hackathon and my contribution to that hackathon and I explained my contribution, my approach to test cases, and how we chose the problem statement. Next, the interviewer tested my skills in programming languages and asked in which language I was comfortable with, and I chose Python. So she asked basic coding problems such as palindrome problems and reverse function problems (with and without inbuilt functions) and tested my concept clarity with arrays also by telling me to write a pseudo code for the cases. She also asked basic questions on SQL, and DBMS like what is RDBMS, what is the difference between primary and foreign key, etc. Since I mentioned Machine learning in my AOI, she asked basics of that and ended the interview with some logical questions like how do you divide a circle into 8 equal parts with three lines. The interview lasted for about 30 -35 mins and ended on a positive conclusion. I got shortlisted for the next interview round which was held the next day.

TECHNO- MANAGERIAL ROUND (Physical):
This Interview was a combination of technical and Managerial questions, for me it was a fully technical round. So the interview started with my self-introduction and my interviewer delved into my hackathon and asked the full project details and I started by my approach to choose this problem statement and it was a AI- ML hackathon and my interviewer was a ML enthusiast.

So he asked questions on ML starting from what is supervised learning and unsupervised learning, basic algorithms used in my hackathon and asked me which IDE I choose for programming. I told Spyder IDE and from that he asked why this IDE and how it is different from Python IDLE. I answered that question and he also added few points to my answer and it ended in a positive approach. Next he moved to my certifications and told to explain the ML course from that and the interview lasted about 30 – 40 mins and I got shortlisted to the HR round.

HR ROUND:

This was one of the most stressful interviews of all and it started with my self-introduction the interviewer asked 3 things out of my resume and I answered him. Next, he moved on to my hobbies and I mentioned motivational and TEDX talks he asked me to explain about one inspirational talk from that and I spoke about one of my inspirational people. Next, he asked managerial questions like which one will you choose right mindset employee or a high performance employee when I answered this question, he asked me a chain of questions from my answer and I answered them. Then he finally asked about the location preference and the interview concluded. It lasted about 45 minutes.

Finally, the results were announced at the same day at 5 pm and I was shortlisted for the Framework Engineer Role at Quantiphi Analytics. Be confident on your preparation and be strong on your Areas of Interest and projects.

ALL THE BEST FOR YOUR PLACEMENTS.

SUBHIKSHA M
Siemens Energy
Gurugram

9363389098
subhiksha148@gmail.com
Subhiksha M - linkedin

About the company:

Siemens Energy is an energy technology company. The company develops, produces, sells and
multi-megawatt wind turbines, gas turbines, gas engines, steam turbines and complete systems.

Round 1: (22/09/2024)
Online Test:
The test had 5 sections, total 70 questions and it was for about 1hour 20mins
Section A (10): Logical Reasoning, Verbal Reasoning
Section B (10): Non-Verbal Reasoning
Section C (10): Quantitative, Data Interpretation
Section D (10): Verbal Ability
Domain Ability (30): Technical Question
The Level of difficulty was easy-medium. For Aptitude you can learn from career ride and
Feel free to learn (in 2x) YouTube channel and IndiaBix for practice.
The technical questions were from Circuit analysis, machines, Power Electronics, Control
system, MPC.

Round 2: (07/08/2024):
Technical Interview:
The Interview was conducted through online for me. I had two panel members. The interview went for about 35-40 minutes. First, the interviewer asked about the location preference. Then, I was asked to briefly introduce myself. Then the questions were asked from my Areas of Interest. The questions asked to me are:

1. What are the different types of motors?
2. Differentiate between them with application.
3. Differentiate between slip ring and squirrel cage induction motors.
4. What is a transformer?
5. What are all the components of transformer.
6. What is HVDC?
7. Why do we need to step-up the voltage for transmission

8. Why do we need HVDC as we have HVAC?
9. In which system the loss will be high AC or DC?
10. Can you draw and show me the three phase sequence.
Most of the questions were from my area of interest and they ask questions from the answer which we are saying. So be clear in what you are saying and don't say anything that you don't know much about it.

At the last they asked about my projects, and which one is the current project I am working on and asked me to explain about it. They asked very less question from my project since most of them were covered in my AOI. Be thorough in everything that you mention in your resume, especially your projects and AOI.

Round 3: (09/08/2024)
HR Interview:

Round 3 was Telephonic Interview. The interview went about 5-10 minutes. It started with my self-introduction. The HR asked questions like Why do you want to join Siemens, Where do you stand in next 5 years. Are you ok with the location?

SUBITHRA E
HL Mando Anand India Pvt Ltd.
Chennai

7010162866
subielango14@gmail.com
Subi Elango - linkedin

ROLE: Graduate Engineer Trainee (GET)
CTC: 5.5 LPA
LOCATION: Chennai

COMPANY OVERVIEW:

HL Mando Anand India Pvt Ltd is a joint venture between HL Mando Corporation of South Korea and the ANAND Group of India. Established in 1997, the company specializes in designing and manufacturing steering, suspension, and brake systems. HL Mando India offers advanced hydraulic brakes, shock absorbers, and struts for cars and SUVs. The company has three state-of-the art sites near Chennai, India. It operates on core pillars of unity, innovation, and transparency. HL Mando India focuses on developing next-generation technology. The company aims to enhance driving safety and comfort.

ROUND 1: General Aptitude Assessment
Date: 10/12/2024
Time: 4:00PM to 8:00PM
Duration: 45 Minutes
Venue: Any location
Mode: Online Mode

Questions were from the topics (Percentages, Ratio & Proportion, Data interpretation, Number series, Time-Speed-Distance)

ROUND 2: Critical thinking and Domain Assessment
Candidates are assessed on critical thinking skills, evaluating their ability to analyze complex problems and make logical decisions. Domain assessment also plays a crucial role, testing candidates' technical knowledge and expertise in their relevant field.

Date: 12/12/2024
Time: 4:00PM to 8:00PM
Duration: 70 Minutes
Venue: Any location
Mode: Online Mode

ROUND 3: Psychometric Test

Psychometric test assesses candidates' behavioral traits, personality, and cognitive abilities to evaluate their fit for the role and company culture. It helps identify strengths and potential areas for growth.

Date: 14/12/2024
Time: 4:00PPM to 8:00PM
Duration: 70 Minutes
Venue: Any location
Mode: Online Mode

ROUND 4: Technical and HR Interview

The students who cleared all the above rounds were shortlisted for the final interview process. In this round both technical and HR questions were asked (one technical interviewer and two HRs were there).
First, they asked me to introduce myself and questions includes
HR's Questions:

- Family Background
- About Schooling
- Why did you choose EEE?
- Which department do you like to work in our company (Production, Manufacturing, R&D, Sales and marketing)?
- Are you comfortable with rotational shifts?
- comfortable in any location?
- Ready to sign the bond for 5 years? (there is no bond in this company)

Technical Questions:

- Working principles of dc generator and alternator and its difference?
- Transformer types and its working?
- Basic Power System and Electrical Machines based questions.
- Questions About implant training (I have mentioned in my resume)

1. What are all the equipment u have seen in that substation?
2. What type of transformer do they use?
3. What type of circuit breaker do they use?
4. Voltage ratings.

- How do you save energy?
- According to you, what is an efficient machine?
- How do u improve efficiency?
- Kirchoff's voltage and current law?
- Why did u choose this project?
- Project related questions
- How does a synchronous generator work?

- What is power factor and why do we want to improve the power factor? • Then how do we improve the power factor?
- As a Electrical engineer which field u are willing to work? (Ex: substation side, Ev's side etc..)
- Any questions do u have to ask with us?

The results were announced on 5th Feb 2025, and I got Selected!

TIPS:

- For aptitude round, practice in **IndiaBIX platform**.
- For psychometric round, **be honest and choose the answer**. Many questions were repeated in different ways but have the same meaning to test our honesty.
- Update Your resume related to the company.
- Be strong in basics of electrical subjects (mainly in Electrical machines, Protection and switch gear)
- For technical interviews, **try to answer all the questions** without saying I don't know (they will notice your managing skill).
- Mostly try to ask questions at the end of technical interview.

"Believe you can and you're halfway there."

SURRVESH K S
SAP Labs (SAP Concur)
Banglore)

99448655731
surrveshks@gmail.com
SURRVESH K S - linkedin

Month(visited): August 2024
Role : Associate Software Developer

Round 1
Type: Coding
Mode: Online
Duration: 45 min
Difficulty level: Easy

This round had 2 easy coding questions and was conducted in SHL platform. Try to complete the 2 questions completely in a shorter time.

(Questions):
1)In a given array of numbers , choose the pair which gives the maximum product and return
the sum of the values of the pair (contains negative , 0 and positive numbers; constraints 0<=
size of array <= 10^6)
2)Given a sequence of 8 binary digits; in a single round if a particular number's neighbors are
same turn off the bit(turn it to 0) else turn it to 1 ; (Assume there are zeros at the end of each
corner) ; perform this operation for 'n' rounds and return the state after it; (1 <= n <= 10^5)

Round 2
Type : Coding + MCQs
Mode : Offline
Duration : 1.5 hrs
Difficulty : Easy – Medium

The round was kind of handwritten round and we were given question papers. 10 MCQs from Java , 10 MCQs from AI&ML , 5 DSA coding questions (with no language constraints) , 5 coding questions (only Java) were given. The questions given were of medium difficulty in leet code. And the MCQs were of easy difficulty.

(Questions):
1)3 sum problem
2)Maximum subarray sum
3)Reverse linked list pairs
4)Cycle detection in Linked list
5)Grouping similar words together

(Questions): (only Java questions):
1)kth smallest element in BST
2) Minimum number of letters to be added at front of a string to make palindrome
3) Matrix multiplication with threading
4)All permutations of a given string
5) Postfix expression evaluation using stack

Round 3: Technical Interview
Type: Technical Interview
Mode: Offline
Duration: 20 mins
Difficulty: Easy

This round was relatively smooth and conversational.

- I started with a self-introduction, after which the interviewer asked if I would be open to relocating to Bangalore.
- There were also a few general questions about my family background.
- Since I have a Data Science minor, the interviewer asked technical questions related to Java arrays, Python Pandas, and NumPy.
- I was also asked a question related to Convolutional Neural Networks (CNNs). I was shown an image of a green leaf with some shadows that were falsely detected as disease. I explained that these were false positives and suggested data synthesis and model improvements as potential solutions.
- Then, there were follow-up questions on Transformers, where I briefly explained the architecture and its applications.
- Towards the end, the interviewer asked about my interest in higher studies. I mentioned that I am a continuous learner and I plan to pursue higher education in the future to enhance my knowledge and skills.

Round 4: HR Interview
Type: HR Interview
Mode: Offline
Duration: 30–45 mins
Difficulty Level: Easy

The HR interview was a friendly and interactive session.

- The interviewer began by introducing herself and sharing a bit about her background. Then, I was asked to give my self-introduction.
- She picked up on the extracurricular activities mentioned in my resume and asked me to elaborate on them.

- I was also asked about my roles and responsibilities in college, which included various leadership and team-oriented activities.
- She asked me to explain one of my research publications in detail.
- I was then given a hypothetical scenario: What would I do if a team member is not contributing effectively? I shared my experience of working in over 10 different teams for college hackathons and emphasized how unresolved conflicts can reflect poorly in the final product. I explained my approach of addressing issues early through communication and collaboration to ensure team alignment.
- Another situational question was about handling conflicts within a team, to which I shared similar real-world experiences and how I helped mediate or navigate such situations for better outcomes.
- I was also asked if I knew about SAP Concur. While I wasn't entirely sure, I mentioned that I believed it was one of SAP's Lines of Business (LoBs). As a general takeaway, I would recommend gaining a basic understanding of the company and its products beforehand.
- She asked what skills I had gained during college, and I discussed both technical and soft skills acquired through academics, internships, and extracurriculars.
- Toward the end, I was asked whether I planned to pursue higher studies. I conveyed that I am a curious and consistent learner and that I do see myself continuing my education in the future.
- The interview concluded with two thoughtful questions that I had prepared to ask her. She was impressed by my interest and curiosity.

As a piece of advice I received — and would pass on — it's important to smile and stay calm
throughout the HR round, as it helps set a positive tone for the conversation.

✓ A total of 8 students were selected in the final round — 7 from Computer Science and I was the only one from Electrical Engineering to get placed.

(Note):
1)Know about your projects and the all stuffs which you put in your resume very well
2) Research a lot about the company , about the tech stacks they are using(**Java , **Springboot, **ReactJS, **python for ML) , about the projects they are working on.
3)Also ask questions at the end of the interviews which makes interviewer feel that you are interested more in the company.
4)**For higher education regarding questions - please refer to the company policies before
answering
5)Try to be more adaptive and be open to work in any tech stack and try to show that to your interviewers as well.

ALL THE VERY BEST GUYS !!

SWATHIKA V
Daimler India Commercial Vehicles
Chennai

9360841980
swathika22cbe@gmail.com
Swathika V - linkedin

Role: Graduate Engineer Trainee (GET)
CTC: ₹7.5 LPA
Location: Chennai

Company Overview:
Daimler Truck is one of the world's largest commercial vehicle manufacturers, producing trucks and buses under brands such as Mercedes-Benz, Freightliner, and BharatBenz. Its Indian operations, Daimler India Commercial Vehicles (DICV), are based in Chennai and manufacture BharatBenz trucks and export vehicles. The company focuses on sustainable mobility, innovation, and global expansion, operating in more than 170 countries.

Round 1: Online Assessment
Date: 28.11.2024
Venue: PSG Tech, Air Lab
Platform: Mercer Mettl
Duration: 1 hour 45 minutes

The test consisted of multiple sections, each with a timer:

- Behavioural: 72 questions with a time limit of 25 minutes
- Aptitude: 5 sections, each with 8 questions and a time limit of 8 minutes - Technical: 30 questions with a time limit of 40 minutes. Covered topics from both Electrical and Electronics domains, including Analog, Digital, Electrical Machines (AC and DC), Power Systems (PSA, T&D, PSOC, Protection, and Switchgear), and Power Electronics.

Round 2: Group Discussion
Date: 28.11.2024
Time: 4:00 PM

The shortlist was announced within two hours of completing the test. The shortlisted candidates were divided into groups of five. Unlike typical GDs, this round was case study based. We were given two topics: Mars Rover and Anti-lock Braking System. Our group chose Mars Rover.

The HR provided a brief overview, highlighting challenges and potential solutions. We were given 15 minutes for preparation and 10 minutes for the presentation. I began with the introduction, and we successfully presented our case study within the given time. The shortlist was announced that evening.

Round 3: Technical Interview
Date: 29.11.2024
Mode: Offline (in-person)

The interview began with the interviewers briefing me about the company and the role. I introduced myself and was asked about my willingness to relocate to Chennai. They reviewed my resume and asked about my Honors degree.

They then placed a bottle in front of me and asked me to imagine it as an electric vehicle, explaining its working in a way understandable to a layperson. Questions included:

- What are the control systems used in EVs?
- What do you know about IoT, AI, Blockchain, Additive Manufacturing, 3D Printing, and Data Analysis?
- How does an EV start?
- What are the components responsible for starting 2-wheeler and 4-wheeler ICE vehicles?
- Is EV technology sustainable? Why?
- EV vs. ICE comparison
- What are the latest types of batteries used in EVs?
- Mechanism of EVs
- Electrical components used in ICE vehicles
- Recent trends in the automobile industry
- Hydrogen vehicles

At the end, I was asked if I had any questions. I asked a couple, and the interviewers responded patiently and informatively.

Round 4: HR Interview
Date: 29.11.2024
Mode: Offline (in-person)

This round included basic HR questions:

- Family background
- What was the most difficult decision you've taken?
- What does a job/work mean to you?
- List three things that negatively impact you and that you wish to quit · Are you comfortable relocating to Chennai?
- How was your experience as a placement representative?
- What values did you gain through NCC?

The final results were announced the same day at 7:15 PM. A total of six students were selected and received provisional offer letters.

General Tips:

- Be confident when answering questions.
- Avoid discussing government exam preparations or future academic plans, as it may raise doubts about your long-term commitment.
- Know your resume thoroughly. Be ready to explain every detail. · Greet your interviewer with a smile and handshake (if culturally appropriate). First impressions matter!
- Understand the job description and research the company's work, values, and recent developments.
- Maintain a steady posture, minimize fidgeting, and make consistent eye contact to show attentiveness and confidence.
- Avoid one-word responses. Aim to elaborate your answers in 3–4 meaningful sentences.
- When asked if you have any questions, take the opportunity to ask thoughtful ones to show genuine interest.

TANISH PADMANABHAN R J
Visteon Corporation
Coimbatore)

9789383970
tanishpadmanabhan@gmail.com
Tanish Padmanabhan R J - linkedin

The interview process was entirely focused on software development, with a strong emphasis on C and C++ programming skills. Here's a detailed breakdown of the rounds:

Round 1: Online Assessment
The first round consisted of a mix of multiple-choice questions (MCQs) and programming problems:

- **Topics Covered in MCQs:**

1. Aptitude
2. C programming
3. Operating Systems (OS)
4. Embedded Systems

- **Programming Questions:**

Three problems of easy to medium difficulty.

Round 2: On-Campus Coding Test
The shortlisted candidates were invited to the Amrita campus for the next round.

Format:

- Three medium-level programming problems.
- Solutions were to be written on paper.

Round 3: Technical Interview
Candidates who cleared the coding test were called for a technical interview.

- **Key Topics Discussed:**

1. **C/C++:** Structures, pointers, storage classes, reference variables, dynamic memory allocation, data structures, and object-oriented programming (OOPs). ○ **Embedded Systems:** Fundamental concepts and applications.
2. **Operating Systems:** Comparison of OS and Real-Time Operating Systems (RTOS).
3. **Digital Electronics:** Differences between latches and flip-flops, edge-triggered vs. level-triggered circuits, and relays.

- **Self-Assessment:**

I was asked to rate my proficiency in C/C++.

Round 4: Managerial Round
This round was more conversational and focused on behavioral and situational aspects

- **Discussion Points:**

1. Background check.
2. Strengths and weaknesses:

- **Suggestion:**

Highlight your strengths with real-life examples (e.g., teamwork in sports, leadership in clubs). For weaknesses, mention one and explain how you are actively working to overcome it. Situational questions, such as handling differences of opinion with a manager or team lead.

Round 5: HR Interview
The final round was the HR interview.

Topics Covered:

- Background verification.
- Knowledge about the company and its goals.
- Questions about how I would contribute to the company.
- Flexibility and willingness to stretch myself for the role.
- Job location confirmation.

Key Takeaways

- For Visteon, a strong foundation in C/C++, Embedded Systems, and Operating Systems is essential.
- While projects were not discussed due to time constraints, being well-prepared to explain your projects is crucial for similar interviews.

This experience highlights the importance of both technical proficiency and interpersonal skills in the interview process.

UTHAYA KANNAN C
Light Mechanics
Banglore

lightMechanics
Empowering
E-Mobility with Laser Technology

8438550053
uthayakannan812@gmail.com
Uthaya Kannan - linkedin

Role : GET (Graduate Engineer Trainee)

Round 1 : Technical Test

The first round was fully core and no aptitude questions were given in the first round. Its questions were fully related to the core concepts of EEE and higher secondary physics and chemistry. As the company domain is manufacturing LASER devices, many questions were asked on the mechanics of LASER.

Round 2 : Group Discussion

For GD, it was a total of 8 members for a session. The topic given was “Is a decision to be made quickly or effectively”. It was quite a debate, so the GD convener at the middle of the GD asked all the members to not fight but discuss. Everyone got the chance for expressing our points and also for concluding. It went for about 15 minutes.

Round 3 : Personal Interview

Before my interview I asked my peers who attended before me, for someone it was 5 mins and some it was 40 mins. So I was able to understand that the starting 5 mins is the crucial part of this interview. Previously, a sheet with our job role preferences were given and our preference for shifting on any location. I was selected for the core role rather than marketing role.There was

only one panel for the whole 40 members, and there were 6 panel members in which only 3 asked questions and two of them were HRs. Firstly, I was asked to explain about all my 3 projects that are mentioned in the resume. At the time of explanation many questions were asked from the key words I used. Secondly, basic questions from Electric Machines were asked, which was to explain about all the motors in both AC and DC and its applications and their working and basic principles involved in the machine. Then, the questions were raised about power factor and its formulas, they insisted on explaining about it with examples. Then they asked about being willing to shift to any location in India and I had no issue with that. It took 35 mins for my interview. They mainly focused on the basics rather than any specialised courses.

Then he gave me some array programs and asked me to write code for the same usingany online compiler. The questions were,

1. Spiral Traversal of a 2D matrix
2. Linked List creation
3. Rotate a 2D matrix by 90 degrees clockwise
4. Find the pair which adds up to give the target sum from a linear array This round lasted for around 1 hr 20 mins.

NOTE:

- The number of questions, type of questions, and duration of interview differed according to the panel.
- These types of questions can be foundat **Leet Code or Geeks for Geeks.**

HR Interview:

The HR asked me about the workshop I have conducted at Yukta: and then asked me whether I knew in what areas Yantra Vision is currently working (just have a look at their website before attending the interview) he also explained to me some of the areas they are working on. Following that I asked him some questions about Yantra Vision.

The final resultswere announced on the day itself and I got placed at Yantra Visionwith an Intern + FTE offer.

Tips:

- Karthi sir's class will be more helpful to clear codingproblems (Both Online test & Technical Interview).
- Practice 2 to 3 coding questionsregularly.
- Create a resume that must be well-aligned to the companyand a good self-intro.
- Don't specify anything in your resume that you don't know.
- Be confident, have a smile on your face, and maintain eye contact throughout the interview.
- Try to explain any question asked in the interview with an example as far as possible.
- Try to ask questions at the end of the interview. It will show that you are interested in that company.
- Have a high level of patiencethroughout the placement process.

JUST TELL YOURSELF "YOUR TIME WILL COME" AND TRUST THE WAY IT GOES

Rounds:

1. MCQS (Aptitude+Technical)
2. Technical Round
3. HR Round

Round 1: Online Test (Aptitude+Technical) **Date: Oct 21, 2024.**

Time Duration:30 min each.

Online test consists of aptitude + technical questions in which the aptitude questions are from easy to moderate level which can be practiced using (the IndiaBIX website). Topics include

- Number Systems
- Ratios and proportions
- Mixture and Allegations
- Logical Questions like word pattern identification
- Speed, Distance, and Time.

In technical questions, it is completely core domain questions from subjects

- Circuit theory
- Electrical machines
- Power systems
- Digital Logic Circuits
- Electronic Devices and Circuits.

Once you are strong with the electrical and electronics basics you can crack the first round. Focus on giving correct answers rather than attempting all the questions.

Round 2: Technical Round **Date: Nov 7, 2024.**

In the technical interview, they startedwith my resumeand questioned regarding my academics starting from the electrical machines with questions including the

- Complete working of a DC Machine AC machine?
- Types of AC Machines, Workingand Applications?
- What other electrical machines do you know?
- Do you know what are the components of a protection system?

- Explain the projects.
- How do you knowE-tap? (I mentioned in my resume)
- Define Switchgear?
- Basic Power System and Electrical Machines based questions
- Family Background
- How will you rate yourself for Autocad?(I mentioned in my resume)
- Since I mentioned the project management course he started to ask questions on what did I learn?
- Will you be able to manage in the Gulf region?
- What if in case you are not selected for the Gulf region? (I answered by working in the Chennai branch I could do the same work that is to be done)

The Interviewer was impressed and laughed. Within half an hour I was called for an HR round.

Round 3: HR Round **Date: Nov 7, 2024.**

For me, the HR Round was taken by the Project Management head of the company.It was more of a friendly conversation.

- He asked about thefamily background
- Why not higher studies?
- What do you know about GAEP in Chennai?
- Three strengths and weaknesses of me

Since I mentioned decision-making as my strength he started questioning which country would prefer if I were selected (I was half-minded about going abroad but without any delay I preferred Qatar)He continuously asked about Qatar or Bahrain, Qatar or Saudi Arabia. (I answered only Qatar). After these rapid-fire questions, he stood up and gave me a handshake on I've been selected for the Chennai branch.

The results were officially announced on Nov 11, 2024

Tips:

- Keep your resume based on the company
- Be strong in core subjects
- Keep your parent's occupation simple and never mention business.
- Try to ask questions at the end of the technical interview.

“The most certain way to succeed is always to try just one more time.”

YUVA SRI B

yuvashrimahesh@gmail.com
Yuva Sri B - linkedin

Round 1 : Online Assessment

The first round includes four sections which are based on technical understanding and testing behavioural skills.

Section 1: Technical questions

This round majorly focused on MCQ questions from DBMS, Networking, Operating System, and code snippets. A few codes containing loops,pointers, and recursion were given and we have to determine the output

Section 2: Essay Writing

In this section a topic was provided and asked to write about that for 200-250 words. For me, the topic is “Importance of Cleanliness and the Impact of Swachh Bharat Mission on Society”.

Section 3: Gamified Aptitude

This section includes a series of games solving puzzles and logical questions. This is timed section and was quite easy.

Section 4: Behavioural Assessment

The behavioural assessment is based on Attitude, Work ethics, Team collaboration,Communication skills, Problem-solving approach, Leadership qualities, Handling of pressure/conflicts.

Round 2: Technical Interview & HR Interview

This round was scheduled for 15-20 minutes. Both Technical and HR happened in the same meeting testing core cs fundamentals and coding. I started with my self introduction, my academics and my projects done in cs. He then asked me to explain a specific project in detail including what my role was and what tech stack I have used.Some technical questions include:

1. Explain your project and why you choose this project.
2. What is storage class
3. What is dynamic memory allocation
4. Difference between malloc and calloc

- In python, state the difference between list and tuple.
- What are operators?
- What is the difference between call by value and call by reference in C?
- What is Recursion
- What is a dangling pointer? How is it overcome?

HR Questions:

1. You are from electrical, what inspired you to join software?

INTERVIEW TIPS:

For round 1, concentrate on practicing more on code snippets part, as it is a timer based round. Kartick sir notes are enough to crack a technical interview. Also you can visit some online websites like glassdoor, unstop, geeksforgeeks for more technical preparation.

Job role: Intern + Full time

Online test [22.08.2024]

The test consisted of 40 questions,20 aptitude questions and 20 C snippet output questions. We had 45 minutes to solve all 40 questions. The aptitude section covered topics like ratio and proportions, speed and time, and time and work. For the C questions, Karthi sir's classes and notes provided sufficient preparation.

Round 1[28.08.2024]

This was a basic technical interview. Mine was conducted online, though some attended in offline mode. The interview included a self-introduction, followed by two coding questions that had to be compiled using an online compiler. Additionally, there was one aptitude question and one logical reasoning question. I was asked to choose a topic from their list and speak on it for a few minutes. I chose the CAN protocol and spoke for about 2 minutes. Then, they asked me to explain one of my projects. However, they ended up asking me to go through all of my projects, which I believe was unique to my interview. That was the end of the process.

Round 2[28.08.2024]

This was the main technical interview, and it was conducted in person. It included my self-introduction and project explanations. I was asked questions related to Embedded Systems, which is my area of interest, as well as C, C++, basic Data Structures and Algorithms (DSA), and Object-Oriented Programming
(OOP). The interviewer also asked me to explain all my projects in detail and asked in-depth questions to gauge my understanding.

HR Round [28.08.2024]

In the HR interview, the focus was mainly on assessing my knowledge about the company, followed by a few personal questions such as details about my parents and their professions. They also inquired about my long-term career goals, my motivation for applying to the company, and how I manage work-life balance. The conversation aimed to understand my personality, values, and how I would fit into the company culture.

Tips

- Be confident and communicate clearly during interviews.
- Prepare thoroughly for the projects you've mentioned and if possible, have projects relevant to the company's work.
- Regularly revise important topics.
- Review the basic concepts of OOPS, DSA and C programming. Focus on the areas of interest you've highlighted.

MOZHIARASU P
Light Mechanics
Banglore

Mozhiarasu P - linkedin

Round 1: Technical Test

The first round included both core questions and a few aptitude questions. The aptitude part covered topics such as averages, percentage, and ages. The core section focused on concepts from EEE as well as physics and chemistry.

Round 2: Group Discussion

There were 8 candidates in one panel for the group discussion. For us, two topics were conducted

1. Is social media spreading awareness or misleading people?
2. Pros and Cons of Using Job-Seeking Platforms such as LinkedIn

We had 5 minutes of preparation time before the discussion started. The session lasted around 25 minutes.

My advice: Don't focus too much on vocabulary or pronunciation. Take your time don't rush to start first. Think through your points during the preparation time and be confident when you speak.

Round 3 interview

There was only one interview panel for all candidates, consisting of 6 members. Among them, 2 interviewers actively asked questions. As usual, the interview began with the common opening question, "Tell me about yourself." After my brief introduction, the focus shifted to the 2 projects listed on my resume. I explained each project in detail, and the interviewers asked several questions related to my work, focusing on the concepts, technologies used, and my individual contributions.

As my areas of interest are Electrical Machines and Protection and Switchgears, they asked me technical questions related to these topics. One of the questions was about the difference between single-phase and three-phase systems. Since I had also mentioned C programming language in my resume, they asked me to write a program to find prime numbers.

Before the interview began, we were asked to submit a sheet containing our job role preferences and willingness to relocate. The panel referred to this sheet during the interview and asked related questions to understand my choices and flexibility.

SOWMYA R
Valeo
Chennai

9944076614
sowmya2732000@gmail.com
Sowmya Rajendran - linkedin

The interview process at Valeo for the Internship comprised four rounds,including a multiple-choice questionnaire (MCQ), two technical interviews, and an HR interview. Below is a detailed narrative of each round.

Round 1: MCQ (Offline) Duration: 1 hour

The first round was a multiple-choice questionnaire (MCQ) with 3 sections. The questions were distributed as follows: Section 1 - Aptitude covering topics like ratio and proportion, time and work, and probability. Section 2 - AIML and Python Section 3 - questions requiring candidates to find errors, determine outputs of given code, and complete code snippets. Candidates who successfully completed this round moved on to the technical interviews.

Round 2: Technical Interview (Face-to-Face) Duration: 45 minutes

The second round was a technical interview focused on programming skills. Here's what to expect:
1.Introduce yourself
2.write a program to find the missing element in an array of numbers from 1 to 100
3.write a program to add two numbers without using '+' symbol
4.Sort the array in both ascending and descending order
5.what is Pointer?
6.what is static and dynamic memory ?
7.Tell about Storage classes
8.what is extern storage class and give an example.
9.what is dynamic memory allocation ?
10.Do you have any questions ?

Round 3: Technical Interview (Face-to-Face) Duration: 45 minutes

The third round continued the technical assessment, focusing on the following:
1.Introduce yourself
2.Explain the project
3.After project explanation he asked me some project related questions to analyse the knowledge and understanding of project
4.What is your contribution to the Project?

pair (4+8 != 5 condition not satisfied) so don’t print its index likewise check for all the pair of num in array)
6.what is your aspiration?
7.Do you have any questions?

Round 4: HR Interview Duration: 20 minutes

The final round was an HR interview, where the focus was on understanding the candidate's background, interests, and career goals. Here's what to expect:
1.Introduce yourself
2.About family background
3.How you face the today’s competitive world
4.I done a course in electric vehicle so she asked why you choose this course and what did you gain from this course
5.Do you have any questions?

Compensation and Packages:The interviewer explained the internship period and package details. This round was designed to evaluate the candidate's fit with the company culture and assess their long-term goals.

Continuous learning leads to success. Good luck!

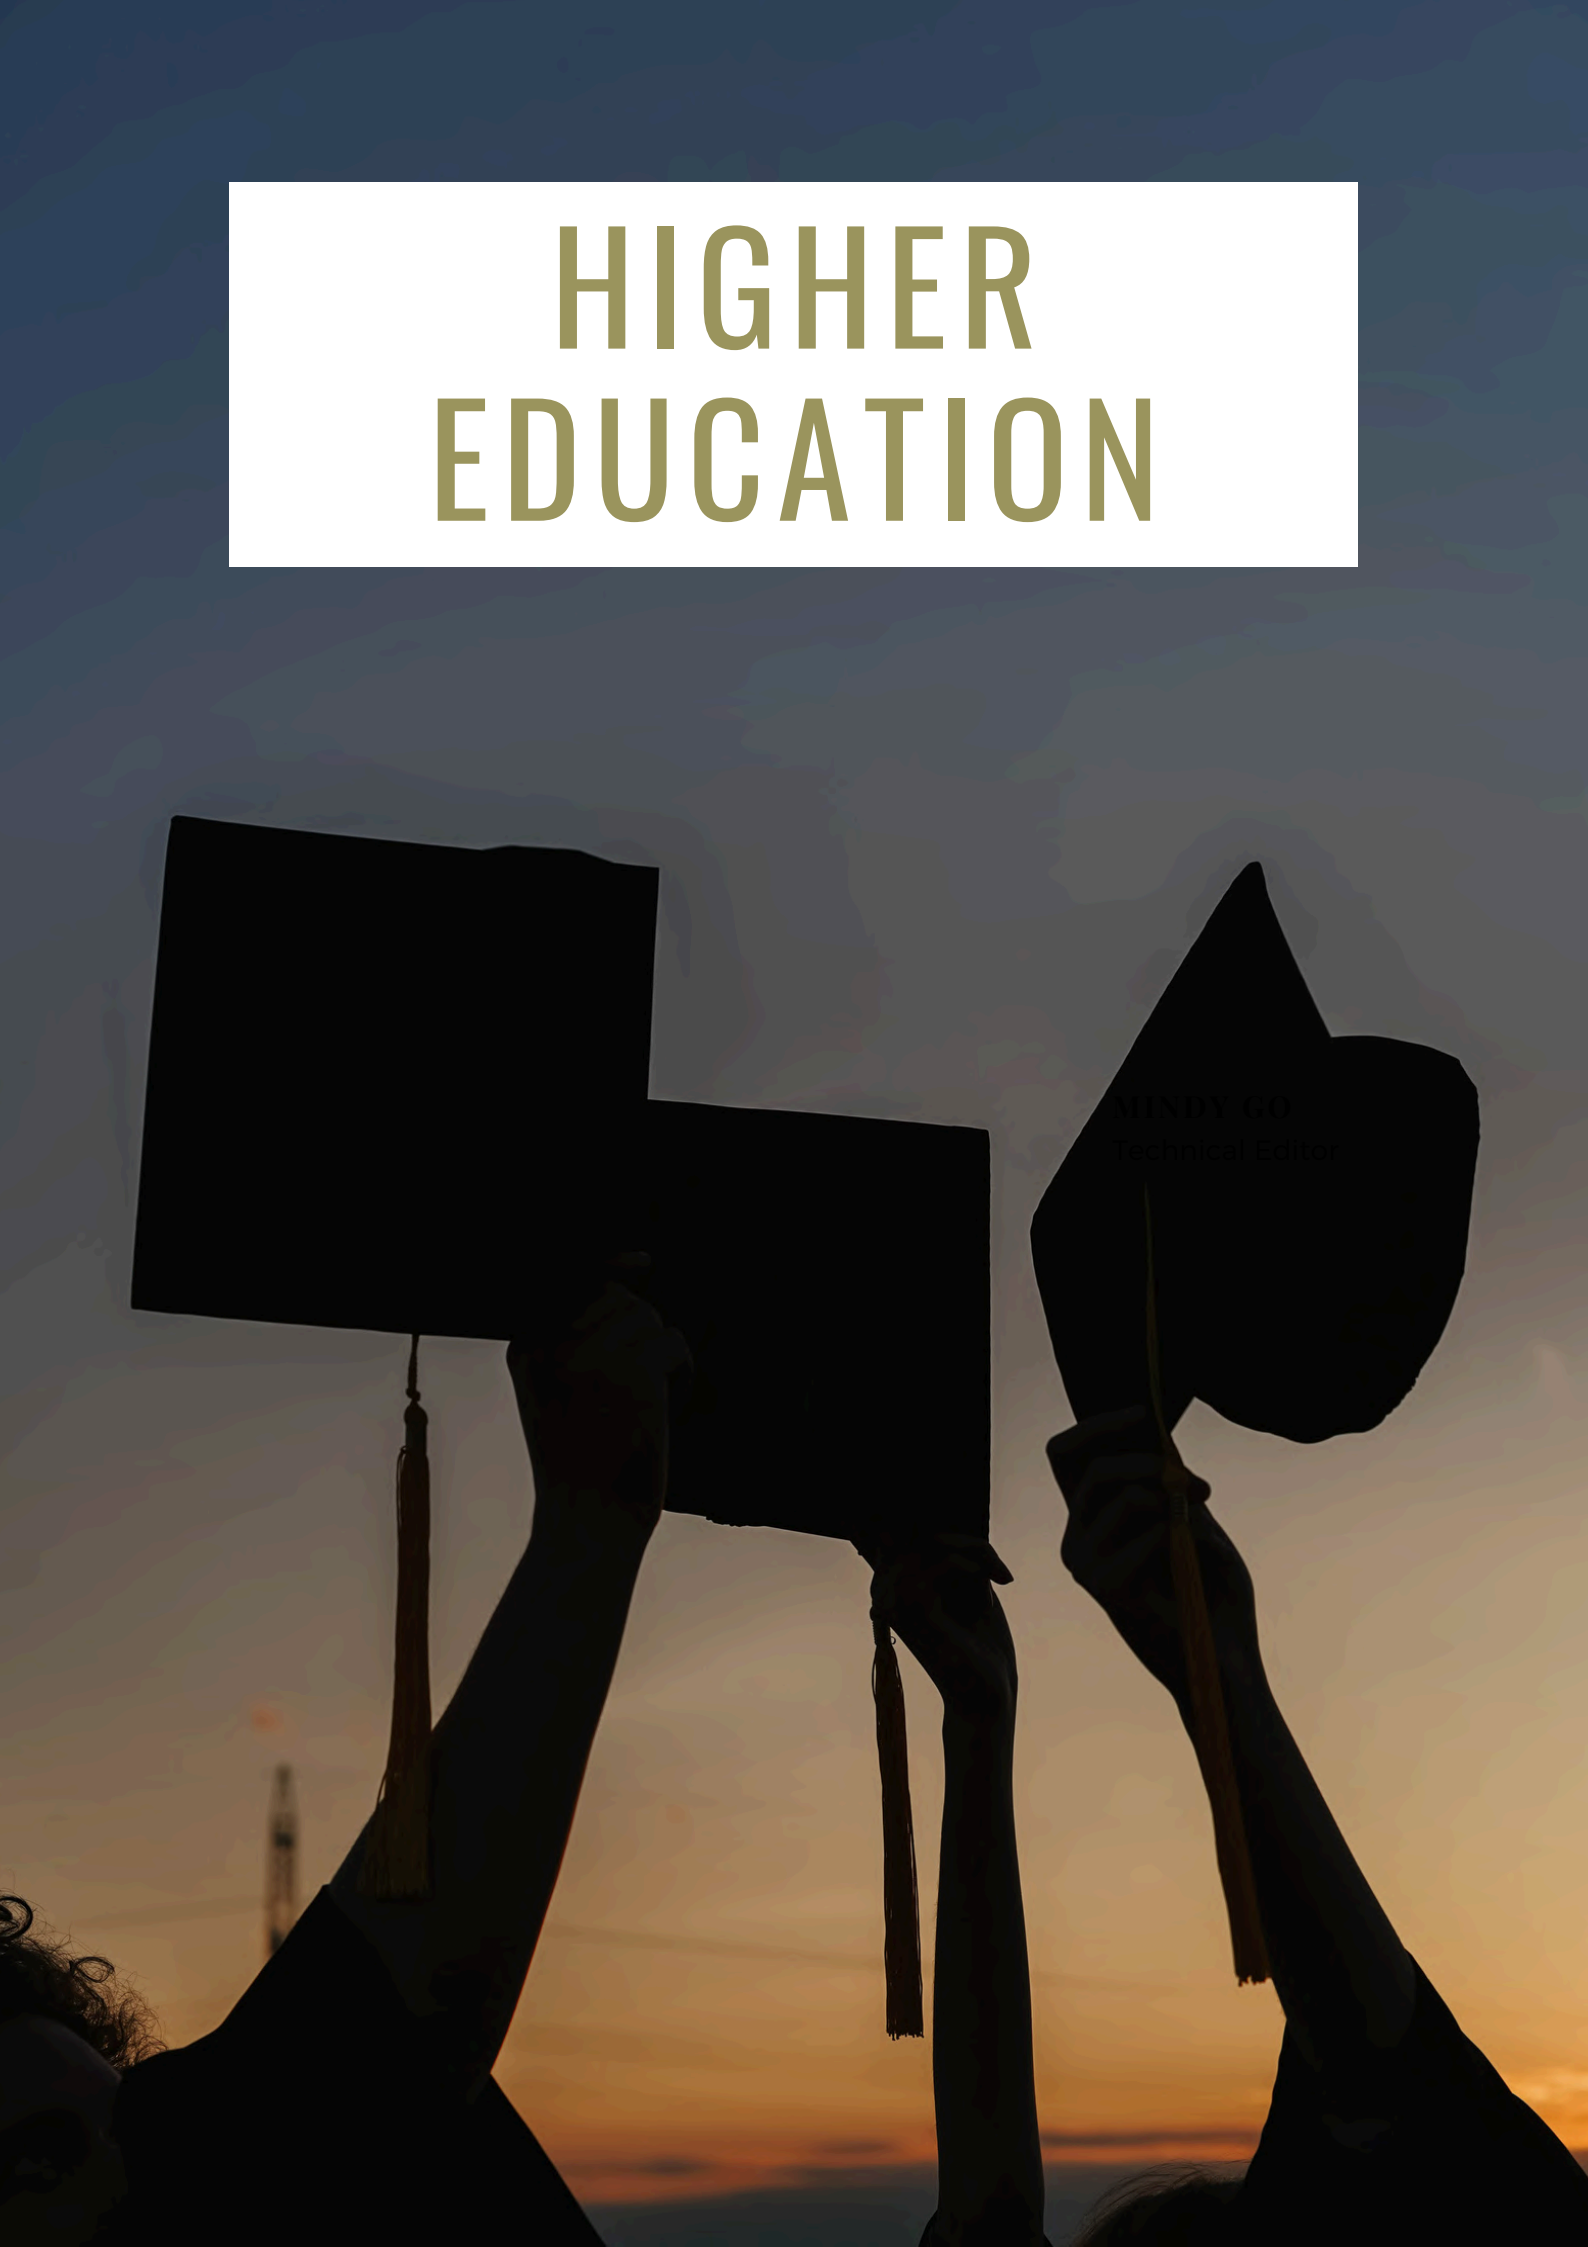
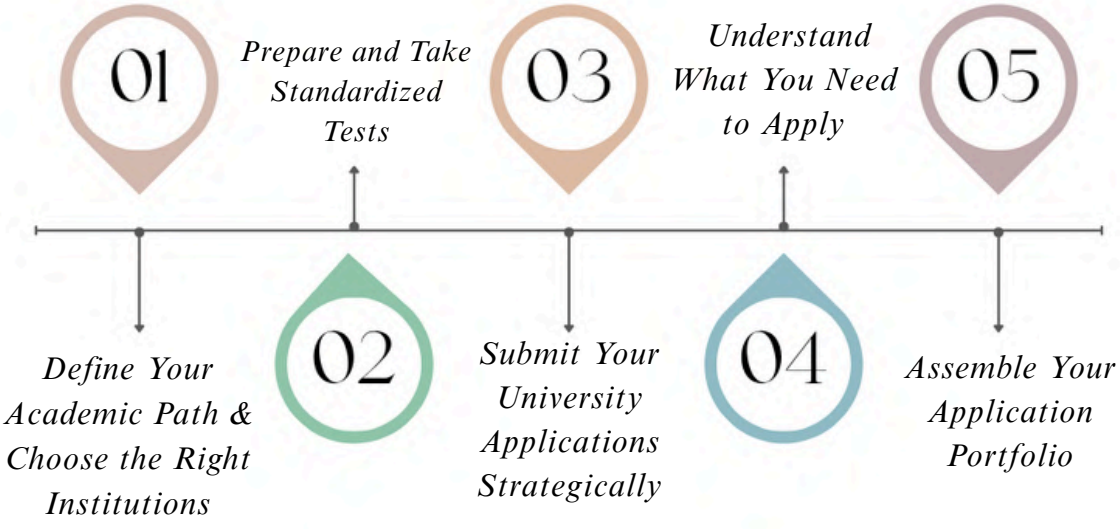
HIGHER EDUCATION



A ROADMAP TO HIGHER STUDIES ABROAD



A Comprehensive Guide to Applying for Higher Education Overseas

Phase 1: Define Your Academic Path & Choose the Right Institutions

Explore Your Academic Interests

Start by identifying the field of study that best fits your passion and career plans. Whether it's Artificial Intelligence, Renewable Energy, Global Business, or Public Policy, your chosen program should align with your future goals.

Find and Compare Universities

Utilize international university rankings and research platforms to build a solid list of potential institutions.

Useful websites for comparison include:

- QS World University Rankings
- Times Higher Education
- U.S. News Global Education Rankings

Look for rankings specific to your course, not just overall prestige.

Consider Key Decision-Making Factors:
When comparing universities, focus on:

- Program reputation and faculty credentials
- Research opportunities in your area of interest
- Access to scholarships and funding
- Campus resources for international students
- Living costs and student life in the city
- Course flexibility (online options, internships, part-time)

Organize Your Application Strategy
Structure your list based on admission chances:

Type	Description	Recommended Count
Ambitious Choices	Top-ranked schools with high entry criteria	3
Realistic Matches	Institutions where your profile meets average admits	3
Safe Bets	Schools where admission is very likely	2

Phase 2: Understand What You Need to Apply

Every university has unique entry requirements. Make sure you're fully aware of what's expected. Typical application components include:

- Minimum academic grades (GPA or percentage)
- Accredited bachelor's degree (check if 3-year degrees are accepted.
- Proof of English proficiency (IELTS, TOEFL, or Duolingo Test)
- GRE/GMAT scores (only if required by your program)
- Letters of Recommendation from professors or employers
- Personal Statement or Statement of Purpose (SOP)
- Academic resume or CV

Always verify requirements for each course directly on the university's official admissions page.

Phase 3: Prepare for and Take Standardized Tests
English Language Proficiency – IELTS Overview

The IELTS test evaluates your ability to understand and use English in academic and social settings. It's accepted in the US, UK, Canada, Australia, and beyond.
Overall Band Score: Calculated by averaging all four sections.
Typical Requirements:
Most universities expect an overall score between 6.5 and 7.5, with no section below 6.0.
Free Preparation Resource: https://ieltsonlinetests.com/ielts-exam-library

Component	Time	Score Scale	Purpose
Listening	30 minutes	0 to 9	Answer questions after listening to audio recordings
Reading	60 minutes	0 to 9	Analyze passages and respond to comprehensio questions
Writing	60 minutes	0 to 9	Write a data interpretation (Task 1) and an argumentative essay (Task 2)

English Language Proficiency – Duolingo English Test (DET) Overview

The Duolingo English Test is a modern English proficiency test designed for convenience and accessibility. It can be taken online from anywhere with a computer, camera, microphone, and internet connection. It is accepted by over 4,500 institutions globally and is often used as an alternative to TOEFL or IELTS.

Section	Approx. Time	Scoring	Description
Adaptive Test	45 minutes	10–160	Tests all four core skills: reading, writing, listening, and speaking. The difficulty level adjusts in real-time based on your responses.
Video Interview & Writing Sample	10 minutes	Not scored (sent to universities)	You'll respond to open-ended prompts, speaking and writing in real time. These samples give universities insight into your language fluency and spontaneity.

Score Needed: Varies by university and program.

General benchmark:

1. **100–110**: Minimum score required for many universities
2. **115–125+:** Competitive for top-tier programs

Test Format Highlights:

- Can be completed in under an hour
- Results available within **48 hours**
- Includes **integrated tasks** (e.g., describing an image, listening and typing, reading aloud).

What Makes DET Stand Out?

- Entire test is completed in **under an hour**
- Results are released within **48 hours**
- Tasks integrate multiple skills (e.g., listen & type, read aloud, describe an image)
- Cost-effective and highly accessible
- Send scores to an **unlimited number of universities for free**

Recommended Prep Platforms:

- Official Practice: Duolingo English Test
- Supplementary Practice: EnglishClass101 for skill specific support

PHASE 4: Assemble Your Application Portfolio

Once your test scores are ready, it's time to prepare the supporting documents that reflect your academic readiness and personal motivation.

Crafting Your Personal Narrative

Statement of Purpose (SOP)

This document tells your story. It gives the admissions committee insight into who you are, where you've been academically, and where you want to go.

What to Include:

- Educational background and key academic interests
- Significant projects, internships, or research work
- Your career objectives and how the program fits your goals
- Reasons for choosing the particular course and university

Endorsements From Mentors

Letters of Recommendation (LORs)

Typically, 2–3 letters are required. Choose professors, research supervisors, or professionals who can speak knowledgeably about your academic abilities, work ethic, and potential.

Other Essential Documents

- Official academic transcripts and consolidated mark sheets
- Degree certificate (provisional or final)
- A valid passport
- A well-structured resume/CV
- Exam score reports (IELTS, GRE, DET, etc.)

PHASE 5: Submit Your University Applications Strategically

Stay Organized with a Custom Tracker

Every university has its own application process. Create a system to track details such as:

- Application opening and deadline dates
- Required documents
- SOP and LOR upload sections
- Debit or Credit Card with international transaction enabled
- Application fees (commonly $50 to $150)

Use spreadsheets, Google Docs, or tools like Notion to keep everything in one place.

Apply Before the Crowd & Monitor Your Progress

Submit your applications early to increase your chances of admission, qualify for scholarships, and receive faster decisions. Track communications, interview calls, and document confirmations carefully.

IN THE PROCESS: INSIGHTS FROM OUR HIGHER STUDIES ASPIRANTS

📍 Got Admission at **University of Texas at Dallas, USA**
🎓 Program: **Master of Science in Electrical and Electronics Engineering** with specialization in **Power Electronics**

When I began my higher studies application journey, I quickly realized how important it is to stay organized and plan early. Here's what I've learned so far:

- **Start early** – give yourself time for exams, SOP drafts, and collecting LORs.
- **Don't panic** – everyone feels overwhelmed at first. Stay consistent.
- **Join online communities** – like Reddit, LinkedIn, or Yocket for peer advice.
- **Talk to seniors** – real experiences give practical insight.

Applying for higher studies is like running a marathon — it takes time, effort, and strategy. But with the right plan and mindset, you'll cross the finish line successfully. Good luck! You've got this — and feel free to reach out to me for any help.

NANDHAN B
mapj5556@gmail.com
9944198226

📍 Applied to **New Jersey Institute of Technology,USA**
🎓 Program: **Engineering management**

Studying abroad isn't just a goal—it's a whole process. From figuring out where to apply to pulling together documents, there's a lot to manage. But with the right steps and enough prep time, it's completely doable.

It's normal to feel overwhelmed at first, but if you start early and stay consistent, things will fall into place. There's no one-size-fits-all method, but staying informed, organized, and focused can make the process a lot smoother. And once it's done, the feeling of getting that acceptance letter is worth every bit of the effort.

YUVASHREE K
yuvashreekeerthivasan75@gmail.com
9385867431

IN THE PROCESS: INSIGHTS FROM OUR HIGHER STUDIES ASPIRANTS

📍 Applied to **New York University**
🎓 Program: **Industrial Engineering**

Starting this journey felt like navigating a maze, but with each step, things became clearer. Staying organized and trusting the process helped me more than anything else. Here's what I've learned so far:

- **Start early** to avoid last-minute stress. Planning ahead gives you time to perfect your SOP, prepare for tests, and gather strong recommendations.
- **Take it step by step.** The process may feel overwhelming, but consistency is key.
- **Find your community.** Connect with peers on platforms like Reddit, Yocket, or LinkedIn. Learn from the experiences of others.
- **Seek out alumni or current students.** Their insights about programs and life abroad are often more valuable than brochures.

Pursuing higher studies abroad is a long-term investment in your future. With proper planning and persistence, you're well on your way to achieving it.

SRUTHI S
sruthiii013@gmail.com
8667398911

THE JOURNEY MATTERS

As you flip through the journeys shared in this section — from roadmap outlines to real student voices one thing becomes clear, the path to higher studies is as personal as it is ambitious. It's not just about test scores or SOPs, but about taking that first step with intent, and walking it with persistence.

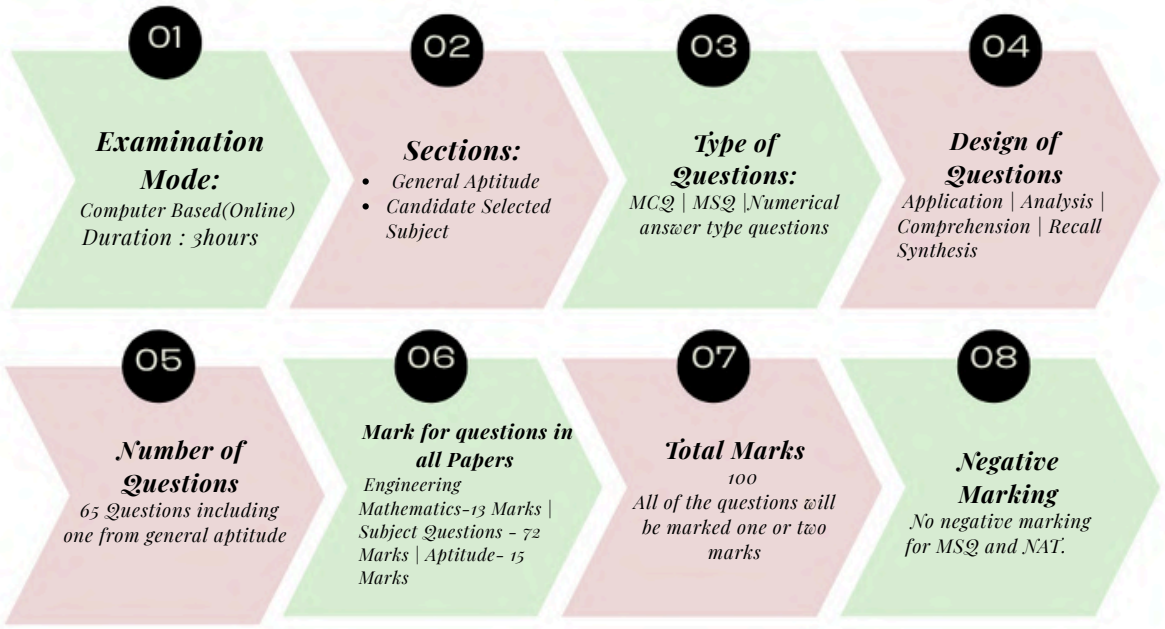
Whether you're aiming for a university abroad or just exploring the idea, we hope these perspectives spark inspiration and offer direction. Because in the end, the real achievement isn't just reaching the destination — it's evolving through the process.

Wherever you go next, go with purpose !

GATE

Graduate Aptitude Test in Engineering

Stories of
Focus, Failure & Fightback



More than just a test, a strong GATE score is a validated credential that can significantly shape your career trajectory.

1. *Acing Public Sector Undertakings (Maharatna, Navratna, and Miniratna) Placements*
2. *Paving the Way for Premier (IITs, NITs, IISC, CFTIs etc.) Higher Studies*
3. *Entry into Esteemed Gov. Research Organizations (DRDO, ISRO, BARC, CSIR etc.)*
4. *Added Advantage in Private Sector & Abroad*

For those who have started, paused, restarted — and kept going. In the end, preparing for GATE isn't just about cracking an exam - it's about discovering how far you can push yourself with focus, resilience, and a clear sense of purpose.

In this section, three of our classmates open up about their GATE preparation - the lessons they learned, the setbacks they faced, the breakthroughs they achieved, and the grit it took to keep going.

Surrvesh K S
AIR 6387
Score: 383

GATE prep : A third year win

Clearing GATE in the first attempt, and that too in the third year, might sound ambitious - but it's definitely doable. In my experience, GATE isn't "tough" in the traditional sense - it's more about clarity of concepts and smart preparation. If you aim for a rank, yes, the game gets more intense. But clearing GATE? Absolutely within reach.

Start with the basics. You don't need fancy strategies - just strong fundamentals and consistent practice. Here's how I approached it:

Key Subjects to Focus On:

- Digital Logic (great starting point)
- Circuit Analysis
- Control Systems
- Signal Systems
- Electrical Machines
- Aptitude and Mathematics

Preparation Tips:

- Use previous year questions (PYQs) as your main weapon -especially for aptitude and math.
- Watch concept videos from GateWallah on YouTube.
- Don't just memorize - understand how concepts connect across subjects. That's what GATE really tests.
- Start your prep in third year itself - it helps not only with GATE, but also core job interviews.

GATE is not about grinding through hundreds of problems - it's about knowing what matters and building your foundation. Focus well, and you'll crack it.

ALL THE BEST

VISHVAGURU R

AIR 5846

Score: 393

ABOUT GATE :

GATE (Graduate Aptitude Test in Engineering) is a national-level exam that evaluates your understanding of core subjects in engineering. While it's widely considered a gateway to postgraduate studies, it's also a great way to assess how well you've grasped the fundamentals of your field. If your goal is simply to clear the cutoff, a strong grip on the basics of your core subjects is usually sufficient. But if you're aiming for a good rank, you'll need deeper conceptual clarity and a more thorough understanding. I began my GATE preparation towards the end of my 5th semester, and that gave me just enough time to clear the cutoff when I attempted the exam in the 7th semester. Looking back, starting earlier would have helped me aim higher. GATE opens a wide range of opportunities—from postgraduate programs in top institutes like IISc, IITs and NITs, to jobs in PSUs. Even if you're not aiming for higher studies or a government job, it's still a valuable benchmark to test your core knowledge and see where you stand.

PREPARATION:

When it comes to preparation, I'd recommend first exploring the different GATE papers and choosing the one that best fits your background and interests. It is not necessary that you must compulsorily choose the paper in which you finished your B.E or B.Tech(e.g. EE student can write CS paper if he/she is prepared for it). For electrical engineering students, EE, EC, and IN papers have similar syllabus. There is also 2 paper combination available where you'll be able to attend both EE and IN. Once you've picked your paper, start with the syllabus, go through it thoroughly. In my opinion, begin your prep with Engineering Mathematics and Network Theory. These subjects not only form the base for many other subjects but also carry significant weight in the EE paper. After finishing a subject, practice previous year questions, at least last 5 years. This will help you understand the types and patterns of questions typically asked. Then move on to other core subjects and repeat the same process: study - revise - solve PYQs. Don't forget to revise your "I HAVE STUDIED THAT ALREADY" portions regularly.The earlier you start, the better your chances.

ALL THE BEST

UTHAYA KANNAN C

AIR 6387

Score: 382

I had the idea of preparing for the GATE exam from my second year, but I only started my preparation in the middle of my third year. I began with Analog Electronics, which was the only subject I managed to complete before my first attempt in the third year. By "complete," I mean not just finishing the theory but also practicing the problems, as practice plays a more significant role than theoretical knowledge. In fact, I took about 10 to 15 tests in Analog Electronics just a week before the exam. My obsession with that subject caused me to neglect other subjects for revision. Confident in my knowledge of Analog Electronics, I focused solely on those questions during the exam. Although I hadn't prepared at all for Network Theory, I was able to solve about 80% of those questions easily, thanks to Vaasu Sir's class. Additionally, my self-study in Digital Electronics helped me solve 2 to 3 problems. However, when the results were announced, I learned that I hadn't qualified that year. The silver lining was that all the questions I answered in Analog Electronics were correct, while some answers I provided in Network Theory were incorrect. From that first attempt, I gained valuable insights into the mindset of the question setters. Many times, when reading a question for the first time, an answer will immediately come to mind that often aligns with one of the options, but many of those instinctive answers may be wrong. GATE is not an exam that can be cracked relying solely on instincts; it requires extensive practice and quick thinking. With this understanding, my confidence grew. I realized that passing this exam was possible if I practiced consistently, but that consistency is the hardest part. In college, it isn't easy to concentrate solely on studies without distractions from outings, socializing, and other activities. Procrastination often hindered my preparation. Furthermore, internal and semester exams consistently impeded my GATE preparation. Eventually, I took my studies seriously and completed my preparation in Digital Electronics, Network Theory, and Control Systems. However, this time, I was unable to practice as much due to the increased number of subjects. Still, I took as many tests as I could during that period. Taking multiple tests can either accelerate or slow down your preparation, depending on your perspective. Regardless of your view, do not stop taking tests, even if you receive negative marks. Tests are the only way to gauge your progress during your preparation. In my first attempt, while I hadn't completed all the subjects, I had a strong grasp of those I had prepared. Consequently, my results were not surprising; I only answered three questions incorrectly (which had negative marks), and I had only attempted questions from the syllabus I had completed, ultimately surpassing the cutoff mark. This outcome allowed me to recognize my strengths regarding accuracy. Some questions can tempt you to select the wrong answers, so avoiding those traps is a crucial skill to develop. In conclusion, my main takeaways from these two attempts are that consistency is the key to success, and taking as many tests as possible without hesitation or fatigue is the second strong mantra for cracking the GATE. Surrounding yourself with good company during preparation can also be beneficial, but be careful to choose your companions wisely to avoid negative influences.

CAT

Common Admission Test

Unfiltered: What CAT Prep Actually Feels Like

While some chase global dreams and others master core engineering, there's a third path — filled with mock tests, pattern analysis, personal interviews, and a different kind of rigor. For one of our own, this path led straight to the gates of one of India's finest B-schools — IIM Mumbai.

Formal definition:
CAT (Common Admission Test) is a national-level entrance exam in India for admission to postgraduate management programs, particularly MBA (Master of Business Administration) programs, at prestigious business schools and management institutes. It is a computer-based exam that tests candidates' aptitude in Verbal Ability and Reading Comprehension (VARC), Data Interpretation and Logical Reasoning (DILR, and Quantitative Ability (QA).
Is that it? So, it's an entrance test for MBA colleges? Sounds simple, but that is not it.

Definition from a CAT aspirant:
A long journey over 10 months, with utmost dedication, lectures, self-preparation, mocks, Netflix, WhatsApp, friends, family ....and books to crack an entrance exam, which turns out to be a passing criteria to attend interviews, where you are grilled with GD, PI and WAT by IIM experts and you start questioning your level of intelligence, and wait for a B- school convert with little patience and peak anxiety.

What does a student require to prepare for the CAT examination?

1. A strong understanding of the syllabus, finding his /her strengths and weaknesses, and preparing accordingly.
2. Proper guidance by a mentor or coaching institute (must! If serious)
3. Self-study hours (90% of the preparation done by self)
4. Mock test, plenty of mocks, and figure out a pattern that is best for you.
5. Good health, a decent CGPA of a minimum 7.5
6. Advisable to have work experience:
7. Work experience has marks for the PI call
8. Makes a person respect the work culture
7. Freshers can also prepare - an added advantage, have energy and enthusiasm.

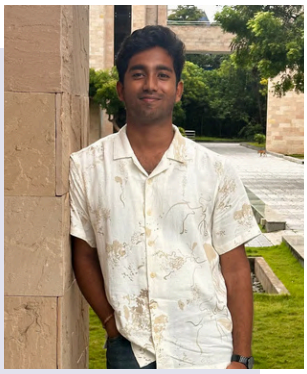
Perks of CAT preparation:
1. One of the toughest exams in India, if you can crack this, the rest are a cake walk.
2. Useful for placement preparation.
3. Develops logical thinking and the willpower to fight.

IIM
Indian Institute of Management
MUMBAI

VIJAY MOHAN

Score : 94.95 %ile

Calls from IIM I, M, V, CAP , Raipur , Sambalpur



CATapulted to Success: A Journey to IIM Mumbai

The CAT results came out on December 20, 2024. Even after scoring a 94.95 percentile, I realized I was only 30% through the journey. The CAT was merely a cutoff to receive interview calls from IIMs. Once the interview calls started rolling out, I received calls from IIM Mumbai, Indore, Raipur, CAP, Visakhapatnam, and Sambalpur. My first interview was on February 11, and my last was on April 4. Finally, of all the IIMs, I converted **IIM Mumbai!**

IIM Mumbai Interview – March 18, 2025, Chennai

1. Getting Shortlisted:
IIM Mumbai is known for its prominence in Operations and Supply Chain Management. I was shortlisted for **MBA (Core), MBA (Operations and Supply Chain Management), and MBA (Sustainability Management).**

2. Interview Glimpse:
IIM interviews are unpredictable. The topics can be very random and may range from current affairs to ancestral history, academic questions to the history of founders, favourite sports to Australian cricket legacy. It could include personal questions, case studies, or even be a stress interview.
My main sources of preparation were my laptop and past interview experiences.

3. Interview Preparation:
I prepared using a framework of **seven buckets:**

- Know Thyself
- Academic Background
- Internship + Projects
- Career Goals
- Extracurriculars / Hobbies
- Current Affairs
- Unexpected / Random Questions

Of these seven, I had prepared answers for most of the questions under "Know Thyself", "Academics", "Career Goals", and "Extracurriculars".

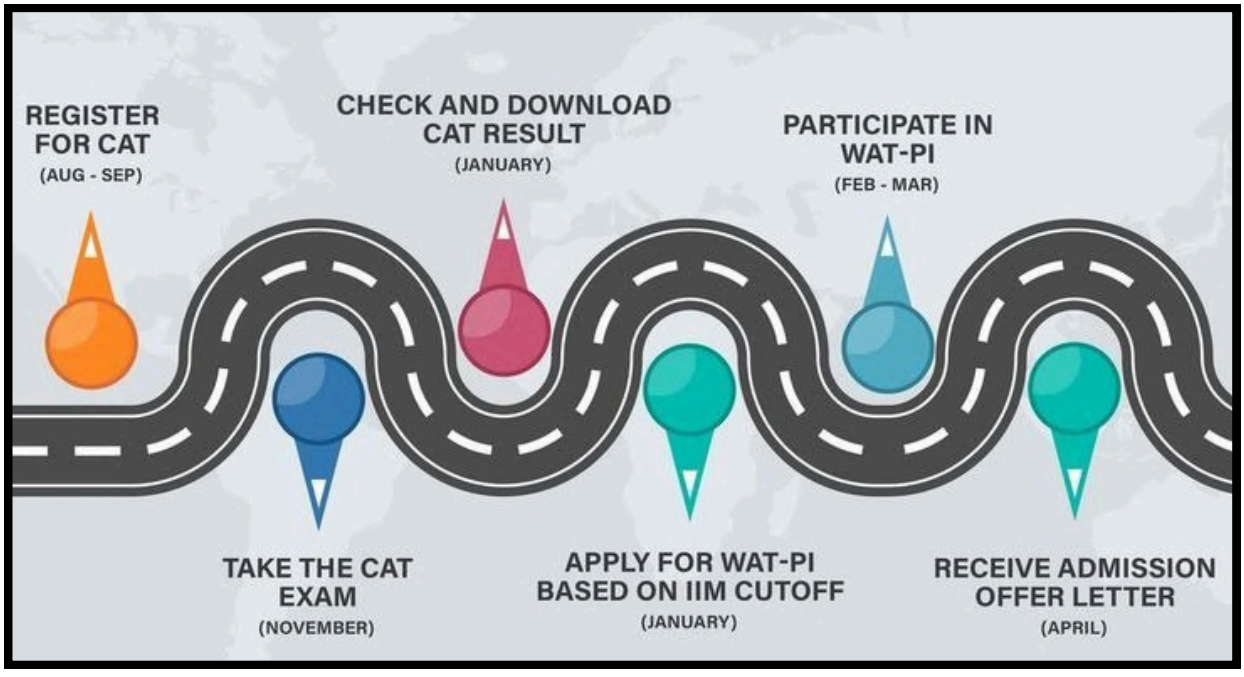
The most important thing was that my answers shouldn't feel over-prepared.
I made sure I was well-informed on current affairs and major global happenings.

4. Interview:

There were two male panellists. As I entered and greeted them, my eyes spotted a chocolate on the table. I smiled and asked if I could take one—they smiled back and said yes.
The questions I was asked revolved around Cricket, my projects, Sustainability Management, Elon Musk, Electric Vehicles, the US–China trade war, and Hindi imposition. Towards the end, we had a light conversation about Dhoni's decision to continue in the IPL.
Overall, I felt positive as I left the room.

5. Result:
Two months later, IIMs started releasing results sequentially. My heart raced when I saw that IIM Mumbai's results were out. I quickly logged in, and the screen greeted me with a **"CONGRATULATIONS"** note!
I had converted MBA (core) at **IIM Mumbai**

Apart from Mumbai, I'm waitlisted at IIM Indore, Raipur, Trichy, Nagpur, Ranchi, Visakhapatnam, Sambalpur, Bodhgaya, and Sirmaur.



Success stories like these remind us that with clarity, consistency, and courage, even the toughest paths can lead to the brightest destinations. Here's to more from our batch flying higher, one exam at a time.

ITS ALL
TEAM WORK !

SMART INDIA HACKATHON

NEW LEARNING METHODS (ADAPTIVE LEARNING)

Our participation in the Smart India Hackathon (SIH) as Team Hack at Ease in the category of New Learning Methods – Adaptive Learning was a milestone event in our lives. It was an intense, enlightening, and great experience, as our solution was the winning entry for our problem statement. The judging and evaluation process took three significant phases, each with its own set of challenges and learnings.

FIRST ROUND:

During the first review, judges evaluated our understanding of the problem statement and innovative nature of our suggested adaptive learning platform. We emphasized the personalization of content delivery in accord with learner actions, for which we were applauded on its relevance and effectiveness.

SECOND ROUND:

The second phase, or the midway assessment, was a turning point. Having shown our prototype, we were given important input by the panel on possible security vulnerabilities and ensuring that a single user is not able to run multiple accounts. It was an important concern in terms of learning integrity in the digital world. The judges prompted us to use real-time validation and monitoring functions to ensure the security of the platform. What impressed in this round was the recognition we gained for successfully addressing the highlighted problem as a team. We brainstormed, rearranged our backend, and implemented safe authentication methods showing not only technical competence but problem-solving flexibility. The examiners praised our creativity which became a decisive element in our ultimate victory.

THIRD ROUND

During the final round of judging, we presented a full solution with a live demo and walkthrough. It addressed the platform's flexibility, user analytics, data security, and scalability for the future. The Q&A challenged our level of understanding and our readiness for actual deployment. The Panel valued our comprehensive approach, design, and proactive integration of feedback. It was an emotional and proud moment for us all when we **won the hackathon.** It justified our **cooperation, determination, and passion for innovation** in technology. A journey of growth, cooperation, and learning—more than an event, SIH was one we will take forward into our own future pursuits.

STM INNOVATION FAIR 2024

Surrvesh K S
Aswin K
Priya K

Participating in the ST Microelectronics Innovation Fair 2024 has been an incredible journey one that started with curiosity and ended with a rewarding blend of innovation, learning, and recognition. As we began working with the STM32 ecosystem, we found ourselves on unfamiliar ground. The entire tech stack was new to us, and the learning curve was steep. We spent several weeks diving deep into documentation, exploring libraries, and debugging our systems for hours at a time. These moments, though challenging, turned out to be invaluable sharpening our problem-solving skills and preparing us for both placement interviews and, eventually, our careers.

Once we gained confidence with the hardware, we developed a health monitoring system as our initial project. However, since the theme of the innovation fair focused on implementing AI models on STM32 platforms, we decided to take it a step further. That is when the idea of building an AI-based posture monitoring system emerged.

The biggest challenge we faced was the absence of a suitable dataset. Rather than let that stop us, we created our own-gathering nearly **200,000 samples** using data from individuals with varying body weights and seating postures. We trained and evaluated multiple models, aiming for both accuracy and real-time efficiency on embedded hardware.
On the day of the fair, held in Delhi, we had the opportunity to present our work to a diverse panel of experts from STMicroelectronics. Each judge brought a unique perspective— technical, commercial, feasibility-focused, and even visionary. It was an eye-opener to see how a single innovation could be viewed through so many lenses.

One of the highlights of the event was when the **CTO of STMicroelectronics** visited our booth. and he appreciated our project.He offered us thoughtful suggestions—most notably, to explore taking this idea into the IT sector and potentially collaborate with chair manufacturers to transform it into a scalable business solution.

When the results were finally announced, we were humbled and thrilled to be named **the winners** of the Innovation Fair. Yet, beyond the win, what we cherish most is the **knowledge, experience, and inspiration** we gained through the process. This journey has been a testament to the value of persistence, the spirit of teamwork, and the power of applied innovation. We are grateful for the opportunity to participate and for the many lessons that will stay with us long after the event.

VELOCITA RACING- SAE EBAJA

It all started with a simple moment—watching a buggy being driven across our college campus. That one sight sparked something in us. The excitement to drive it quickly turned into a deeper curiosity: How is this built? Who builds it? Can we be part of this? When we attended the orientation, our seniors walked us through their journey—how they built the vehicle from scratch, the challenges they faced, and the thrill of competing at a national level. We saw pictures, videos, and heard stories that lit a fire in us. From that moment, we knew—we had to be part of this.

In our **first year** (2022 - 2023), we joined as **Junior Technical Engineers** in the **Powertrain** subsystem. We observed, assisted, and learned. We were new, but we were eager. We watched our seniors work late nights, solve problems on the fly, and pour their hearts into the project. We did the same. That year, despite all our efforts, we couldn't clear the brake test due to an unexpected motor failure. It was heartbreaking. We had poured our hearts into the project, and to fall short at the final moment was painful. But that failure united us. That failure didn't break us—it bonded us. We promised ourselves: Next year, we'll come back stronger. We'll finish what we started.

And we did !

In the **2023–2024** season, we returned with a **mission**. We assumed roles and responsibilities.
Aakarshna K - Team manager and Electrical Lead
Aditya Perumal E - Race Engineer

From day one, it was all in. Along with our teammates from ECE (Sowjanya & Thanuj) we designed the low-voltage, high-voltage, and protection circuits. We selected components, tested them endlessly, designed schematics and PCBs, and sent them for fabrication. We sourced parts at the best prices, managed a tight budget, and worked through failures—again and again. There were nights we didn't sleep, days we didn't stop, and moments we thought we wouldn't make it. But we kept going.

Alongside, we prepared for **virtual events** (along with Mechanical Teammates) like Cost, Design, and Sales, which demanded creativity, clarity, and teamwork.
At the **event site**, we cleared technical inspections, but just as we were nearing the brake test, the **brakes began to malfunction**. Time was running out. But we made it—we cleared the brake test, and the emotions that followed were overwhelming. There were tears, hugs, and a renewed sense of belief.

We rushed through the **dynamic events—Acceleration, Maneuverability, Suspension & Traction, Sledge Pull, and Flood Test**. The **vehicle even toppled** during the suspension test, but rolled back upright, proving the strength of our design. For the **first time in our team's history**, we cleared the **Sledge Pull test**, pulling a tractor—an unforgettable moment.

The next day was the **Endurance Race**. We checked every wire, every bolt. We prayed. We hoped. Seeing our buggy lined up, ready to go, was a **dream come true**. It was surreal. We completed the race without a single electrical failure. That moment—after months of effort—was pure joy. **It was everything we had worked for**. We completed the race and finished 17th out of 40 qualified teams (from 80 total). It wasn't a podium finish, but for us, it was redemption.

We are deeply grateful to our mentor, **Mr. Ravikrishna S**, who stood by us through every phase—answering late night calls, running test runs with us at 2 AM, and guiding us with unwavering patience. Our seniors and super seniors, especially Mr. Atharsh.S (EEE 2019 - 2023 Batch), were always there to support, cheer, and guide us

Beyond the vehicle and the track, it tested us mentally in ways we never expected. Working under pressure, handling failures, and managing expectations challenged not just our technical skills, but our relationships—with teammates, with friends, and even with ourselves. There were moments of tension, disagreement, exhaustion—but also moments of trust, laughter, and growth. We always came back to one thing: the team. We supported each other, lifted each other, and kept moving forward. Navigating team dynamics during high-stress situations taught us patience, communication, and emotional control—skills that go far beyond engineering. We learned Life - Leadership, Resilience, Determination, Consistency, Time Management & lot more.

The "**Garage**" was like our second home and will always remain close to our heart. Than classrooms, hostel or any other place, it was here that we spent most of our time. This wasn't just a project.

It was a chapter of our lives. A chapter that gave us purpose, friendships, and memories we'll carry forever.

From a breakdown to a breakthrough, this journey has truly gone beyond the track and it shaped who we are today!

VELOCITA RACING- FORMULA BHARAT

Velocita E-Racing: The Experience That Shaped My Engineering Journey"
Velocita E-Racing has been more than just a technical team for me—it has truly been a second home where I found purpose, direction, and lifelong friendships. Looking back, I genuinely believe that if I hadn't joined Velocita E-Racing, I might not have become the kind of qualified engineer I am today. In fact, I doubt I would have enjoyed my college life as much as I did.

Velocita E-Racing 2022- 2023 (VR – 07):
My journey began in the second semester of my first year, when I attended an orientation program conducted by senior team members. They introduced the team's mission, vision, and the exciting opportunity to work on designing and building an electric race car from scratch.

Following the orientation, I participated in a week-long workshop where I learned the basics of engineering and the inner workings of the team. After a written test and a presentation round, I was selected to join. That moment marked the beginning of a transformational chapter in my college life.

Initially, I connected with Kishore, a fellow EEE student, and gradually formed strong bonds with students from other departments like Mechanical and Electronics. Under the mentorship of our captain, Mr. Gokul, we were encouraged to master the fundamentals —motors, motor controllers, battery packs, and system integration. These hands-on experiences ignited a deep passion in me for applying theoretical knowledge to real-world projects. In this mean time. I also explored various mechanical concepts beyond my core field, which I found surprisingly interesting and insightful.

From September 2022 to January 2023, I spent most of time in the Power Electronics Lab and our innovation center (the garage). This early exposure helped me grasp academic concepts well before they were taught in class, making learning smoother and more meaningful.For example, concepts like Operational Amplifiers, 555 Timers, and Opto-Couplers were taught by faculty in the fourth semester, but I had already learned them earlier in the garage through hands-on, practical experience.

In the month of November, we designed PCBs for our circuits with the support of industry professionals and successfully got them fabricated. This year, we also ordered a new Battery Management System (BMS) from Hong Kong, which arrived in the first week of January. Soon after, with assistance from Pinnacle Lithium Power, an EV battery pack assembly company located near our college, we integrated the BMS with our existing battery pack.

Our competition took place on January 19th, 2023. In the weeks leading up to it, I spent almost the entire month in the garage—sometimes even sleeping there. During this intense period, our super seniors visited and guided us closely, and I had the opportunity to build strong connections with them, which continue to benefit me today. In the final month, we completed the testing of most circuits and integrated them with various sensors. In the last two weeks, I was responsible for wiring all the sensors inside the car and connecting them with the circuits. After the competition, we had the chance to run the car on our college campus. The moment we pressed the pedal and saw the car move, a wave of joy rushed through me—it felt like a million-dollar moment.

Meanwhile, the team from Bosch Global Software Technologies (BGSW) reached out to us regarding our project and provided continuous guidance throughout the year. After the competition, we were invited to their office along with our car, where we had the opportunity to present it to their leadership team. Thanks to our hard work and the impact of the project, our seniors received paid internship offers and potential full-time job opportunities from Bosch.

“College gives you a syllabus. Teams like Velocita give you a reason to love what you’re learning.”

Velocita E-Raving 2023-2024(VR – 08)

Recognizing my commitment and enthusiasm from the previous season, my seniors entrusted me with greater responsibility by appointing me as Vice-Captain and Electrical Lead of the Velocita E-Racing team for the next season. This role brought significantly more responsibility, from initial planning to the final competition execution.

Our journey began with team discussions on the direction for the new season. We decided to build a completely new chassis, battery pack, and braking system within a strict budget of ₹3 lakhs. As Vice-Captain, I was involved in every stage—from technical planning and budgeting to team management and coordination. These experiences taught me valuable lessons in leadership, conflict resolution, and resource management.

As Electrical Lead, I was also responsible for the design and development of the vehicle's electrical systems. Alongside my core teammates—Mohammed Arsath, Lingeshwaran, Jennelle Sanchia, and Hareesh Kumar G S—we planned and designed brand-new circuits and a battery pack. From August to October, I worked closely with Girinith and Kishore to complete the circuit designs. During this phase, we worked late nights—sometimes until 2 or 3 a.m.—in the garage and hostel, driven by our shared passion for the project.

By the end of October, all circuit and battery designs were finalized, and fabrication began in November, although it was a slightly delayed process. Toward the end of November, we faced a major challenge—a critical document submission required full-vehicle images, but our build was incomplete. We quickly organized an emergency team meeting, aligned our efforts, and within two weeks, built a working chassis and battery pack. That experience reinforced a valuable lesson: "Teamwork never fails."

For the first time, our electrical team independently designed PCBs using EasyEDA, got them verified by industry professionals, and fabricated them successfully marking a significant milestone for us. In December, we completed all remaining work and began full system integration in January. At the competition, we successfully participated in the accumulator, electrical, and mechanical inspections, and received valuable feedback from the judges that will help us improve in future editions.

This leadership experience allowed me to deepen my technical skills in circuit design, battery systems, and system integration, while also sharpening my soft skills in team coordination, budgeting, time management, and decision-making. I'm especially grateful to teammates like Kishore and Girinith, whose support was instrumental throughout the journey.

Despite numerous challenges, we completed the car and ran it successfully on the track. Watching it move after months of effort was an unforgettable moment—a true reflection of the power of collaboration, resilience, and interdisciplinary teamwork. Being part of Velocita E-Racing didn't just enhance my technical knowledge—it shaped my identity as an engineer and gave me some of the most memorable and meaningful moments of my college life.

"Velocita E-Racing didn't just shape my technical skills—it gave my college life meaning, purpose, and memories I'll carry forever."

Abhinesh S R | Dharsana J

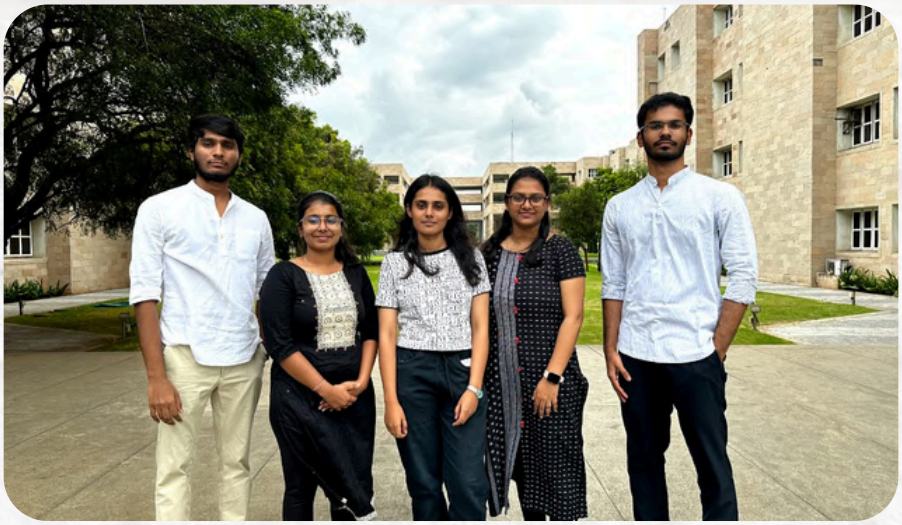
TEAM QUIDDITCH



A soft start, somewhere in between chance and choice, it was !!
For us, it all began on a regular day in our second year — the kind of day you never expect to remember. A few seniors walked into our classroom and spoke about something called the Bosch Future Mobility Challenge. The way they described their journey sparked something in us ,a quiet pull, a sense that maybe this was something worth exploring.We went through a casual interview, got selected, and just like that, a new chapter began. For a while, we were just helping out — learning, observing, absorbing bits and pieces of the project. We didn't know it then, but that phase was building the foundation for something bigger.
Fast forward to our third year — the official notification for BFMC 2024 arrived. With our hearts racing, we applied as a team, sat through the selection interview, and a few weeks later, received the much-awaited mail: You're in. That moment is hard to put into words — we were excited, nervous, and proud all at once.

The journey after that was anything but easy. From figuring out how to make a small car react to road signs, to debugging late into the night, to endless discussions about what "could" work we did it all. There were moments we felt stuck, confused, even doubtful. But somehow, someone always pulled the rest of us up. That's what made this team special. Every month, we submitted progress reports and review videos. Slowly, we saw our little car come to life , stopping at red lights, reading signs, choosing paths It felt surreal. When we finally submitted our project for the semi-finals, it didn't matter what the result would be — because the journey had already given us so much more.

In the end, we didn't make it to the final rounds. But we walked away with something better — stories, memories, and a bond that no result could replace. We laughed, we learned, and we grew — not just as engineers, but as a team.

Sometimes, it's not about where you end up. It's about who you become on the way.

Sibhiganth B
Karthikeyan S

Sahithya R
Srinidhi S

TEAM CAPTIVATORS

We, Team “The Captivators”, had an incredible experience being a part of the Bosch Future Mobility Challenge 2024 (BFMC 2024). Our team members are Karthikeyan S, Sibhiganth B, Sahithya R, Srinidhi S, and our junior Michelle Ann Cedric. We were guided by Prof. R. Divya from the Department of Electrical and Electronics Engineering. Out of more than 160 global teams, we were proud to be selected as one of the 24 semi-finalist teams.

The journey began with immense excitement, especially as we eagerly awaited the arrival of the autonomous car kit provided by Bosch. Despite a delay due to international shipping and customs clearance, the anticipation made the moment it arrived truly unforgettable. Holding the kit in our hands made everything feel real and marked the beginning of our hands-on journey into autonomous systems.

We worked on converting the miniature autonomous vehicle into a fully functioning prototype capable of lane detection, object detection, traffic sign classification, and traffic light classification.
Beyond the technical challenges, BFMC was a masterclass in coordination, time management, and team spirit. Balancing our academic schedules with strict competition deadlines wasn’t easy, but we learned to delegate tasks, stay accountable, and motivate each other. These experiences strengthened our bond as a team and helped us push through each milestone.

Although we couldn’t travel to Romania for the finals due to semester exams, reaching the semi- finals and being among the top 24 teams in the world remains a milestone achievement. The journey not only improved our technical abilities, but also taught us the importance of patience, planning, and tenacity.

TEAM AURORA

Ever since I was a child I have always been fascinated by space and been curious about how things work in this universe and Aurora gave me the opportunity of exploring far beyond what I have known. I first saw the first ever rover developed by Aurora 1.0 during the college tour and that is when I decided I must be a part of this team.

I joined the team in my second year as member of electrical subsystem of Aurora 4.0. During the initial stages I was tasked with designing the thermal management system of the rover and Thermal Power Station for powering a Mars colony in the polar region as part of the International Rover Design Challenge (IRDC) 2022. Later I worked in the power train and traction of the newly built second rover.

My first full-fledged project was the designing of the power train, traction control, nuclear reactor and thermal management system of the rover for IRDC 2023. Where we wone the second prize by defeating over 25 other international teams marking the first big win of Team Aurora.

After becoming the team captain, I guided the team in the development of our third rover of the team. I designed the power train circuit, wiring convention, traction control algorithms and Machine Operating System (MOS) to combat the shot comings and communication issues with ROS.

Being in the Aurora I was able to learn that nothing ever goes as planned and helped me learn how to navigate through various problems. I was also able to become a great leader who is able to drive the team through all the tough times all the while having the team highly motivated to face any challenge up ahead.

REWARDS, RECOGNITIONS AND MORE !

AAKARSHNA K

NATIONAL CADET CORPS

A WAY OF LIFE !

TN21SWA839290 | SENIOR UNDER OFFICER

Joining the National Cadet Corps was one of the most defining decisions of my college life. When I first stepped into the uniform, I didn't fully grasp the depth of what lay ahead. But over the years, the NCC became more than just a co-curricular activity—it became a way of life and instilled in us the bigger dream to join the forces some day. Through early morning drills, camps, and countless hours of training, we discovered a version of ourself that was more disciplined, resilient, and focused. The physical challenges pushed our limits, but it was the mental strength we gained that truly transformed us. We learned to lead when needed, to follow with respect, and to always stand by the team. What stood out most were the values instilled in us— unity and discipline, service, and integrity. Whether it was participating in social service drives, standing in formation during parades, or simply showing up every day with commitment, each moment taught us something valuable. We began to understand the importance of time, the power of teamwork, and the quiet pride that comes from serving something bigger than oneself. NCC also gave us a sense of belonging. The friendships we formed, our seniors, the shared struggles and victories, and the unspoken bond of the khaki uniform—these are memories we will carry for life. It wasn't always easy, but it was always worth it.

As I now look back at these four years, I feel immense gratitude—for the mentors who guided me, the peers who stood beside me, and the experiences that shaped me. NCC didn't just make me a cadet it made me a better person.

ACHIEVEMENTS

- Attended National Special Camp – All India Trekking Expedition, Ooty
- Senior of TN Directorate – All India Trekking Expedition, Ooty
- Extempore Winner – CATC PSG Tech
- Guard Commander - CATC PSG Tech
- Best cadet – 2022 to 2024 of 5 TN Girls Battalion NCC
- Unit level TSC Camp Selected
- Attended Coimbatore Republic Day Parade at VOC Ground – 2022 to 2023

HARI NANDHANA M

ITECH MUSIC

A Musical Journey !

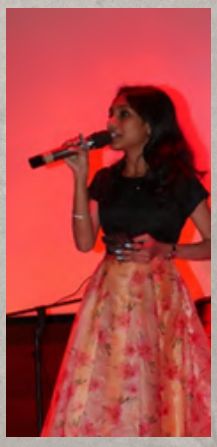
Music has always been more than just a hobby for me—it has been my passion, my therapy, and my way of expressing emotions when words fall short. Being a part of the college music club throughout these four amazing years has been one of the most rewarding and enriching experiences of my life. From nervously humming my first song in front of a crowd to confidently performing full sets on stage, the journey has been nothing short of transformative. The music club became my second home in college. It wasn't just a place to sing, but a platform to explore myself as an artist and individual.

I was fortunate to actively participate in and organize numerous shows and events such as Yukta, Daksha and many others—both within the college and at inter-college band competitions. Each event brought its own set of challenges and learnings, from coordinating with team members and managing time for rehearsals to understanding the technical aspects of a live performance like mic handling, sound checks, and stage presence.

Over time, I also had the opportunity to step into leadership roles—leading group performances, managing events, and representing our college music club in external platforms —which significantly boosted my confidence and organizational abilities.

Being a vocalist in the college music band allowed me to work in a team with extremely talented instrumentalists and singers from different years and departments. This diverse environment helped me build a strong network of friends and collaborators, which was not only fun but also helped me grow musically. I understood the importance of synchronization, harmony, and respecting each member's input to create something magical together.

On a personal level, the music club became a space for self-discovery. By constantly practicing and performing, I discovered my strengths as a singer—my range, tone, and comfort zones—and also became aware of areas where I could improve. This honest introspection helped me understand myself better, not just as a musician but as a person. Singing became a form of meditation, a mental escape from the academic and personal pressures, and a source of peace and happiness. The music club journey has been one of the best parts of my college life. It gave me memories I'll always treasure, helped me become more self-aware, confident, and expressive, and most importantly, surrounded me with people who share the same love for music.



VIJAY MOHAN

TARANGINI CLUB

Member of Design Team	Vol. 8 – "Wave of Thoughts."	Tarangini Magazine

"What could be interesting in a club that creates a magazine and newsletter?" My mind lingered on this question as I filled out the Google form for the club. Later, I was called for a brief interview and got selected, not because I was the most skilled, but because I was ready to work and add value to the club.

We had a clear plan for how the magazine needed to look—no unnecessary content, clean and clear design, structured and professional layout. We worked on the output for a week and managed to release the magazine in such a short time. I was a member of the design team for Tarangini Magazine Vol. 8 – "Wave of Thoughts." We selected an artwork from an alumnus and decided to feature it on the front cover. We received appreciation for our simple yet professional presentation, just the way we had envisioned it

Personally, I got to know about all the happenings in the college. My perspective on various clubs changed after seeing their efforts and contributions. One key aspect of the magazine was to serve as an analytical tool—we were able to identify departments and clubs that underperformed, and we also discovered students' growing interest in hackathons. We were proud to be a medium that showcased the talents and achievements of our peers. I gained exposure to various tools such as LaTeX and Canva, which also helped me develop my personal LinkedIn account. I learned that any opportunity—big or small—needs to be seized and utilized. I'm glad that the question at the start didn't stop me from filling out the form. It eventually made me a proud member of the Tarangini Club

OUR WORK

- collect authentic information, photos, and student contributions of all the events, achievements, creations, projects, and artworks
- sketching the outline of the magazine

OUR TEAM

We were a group of 10–15 members, along with faculty mentors. We split ourselves into teams of three. Each team was assigned specific work.

KAVYANJALI G

ITECH BROADCAST

I've always been someone who goes quiet when technical questions come up—not because I'm not interested, but because I take time to process and understand. On the flip side, hand me a mic or a script, and I come alive.

There's something about hosting, emceeing, or simply engaging with people that energizes me. I enjoy creating a connection, building a vibe, and holding space for expression.

That's why ITech Broadcast immediately felt like the right fit. It gave me the chance to step into a space where my voice, energy, and creativity actually had room to breathe. That's where I feel most like myself—whether I'm behind the mic or out there interacting with a crowd.

Over time, as I mingled with people who shared the same interests, I learned a lot more than just teamwork. Things didn't always go my way, and I had to learn to adapt, make peace with unexpected outcomes, and stay grounded when plans shifted. That ability to adjust and respond calmly is a skill I never thought I'd value so much. It's underrated, but it changes everything. Even among like-minded people, disagreements are bound to happen. What matters more is how those conflicts are handled. I learned that resolution isn't about winning an argument—it's about finding common ground, being open to different perspectives, and keeping the bigger picture in mind.

Stepping into my final year, I began mentoring juniors in emceeing, RJ and Nstage presence. That experience not only gave me the joy of passing on what I'd learned but also helped me evolve further. My communication improved, my stage presence matured, and I became more aware of how to carry myself—both verbally and nonverbally.

It wasn't just about talking anymore; it was about impact. Now, even as I prepare to enter a professional path aligned with my academic background, I know that this part of me—the communicator, the storyteller—will always remain. It's more than a hobby; it's a passion. And no matter where I go, I'll always carry that same warmth, energy, and love for meaningful connection.

SRINIVASAVI K

DANCE CLUB

IHey everyone, I am Srinivasavi. When they asked me to write a piece about my dance club experience, the first thought that popped up in my head was, "How will I write a full-page write-up?"

The one piece of advice I would like to give is: find a passion worth holding on to, something that gives you countless memories throughout your college life.

For me, it was the dance club. I still remember the first time I went to the floor for the audition, the way seniors made us feel comfortable and taught us many things. I believe I spent way more time dancing than studying.

You should never stop learning. This is not only applicable to academics but to everything. Learn new hobbies, pursue your passion, learn from your seniors, juniors, learn from your mentors, and most importantly, learn from your mistakes.

The way the dance club taught me many things, from my first stage performance to making a full choreography, and finally, I learnt to organize an entire event. Rome was not built in a single day. It took lots of breakdowns and lots of happy jumps, and I even received an award on the 2025 Annual Day.

The only way I could do all of this is because of my team, team turned into family. They had my back through everything. Dance had my back throughout college.

I can still feel the energy of Yukta and Daksha. Countless other performances. The first time I went for a competition alone in KPR, I blinked. The next time, we went as a team for a competition in IIT Palakkad. Yeah, I blinked again. Now I am writing this.

On second thought, I don’t think a full page is enough for writing this piece. I hope you guys have something that you look forward to every day of your college life.

SENTHAMIZH SELVI P

ஐந்திணைத் தமிழ் மன்றம்

During my time at college, being a part of Aindhinai Tamil Mandram was one of the most impactful and memorable experiences. I had the privilege of serving as Joint Secretary and later as Secretary for two consecutive years. These leadership roles allowed me to explore my passion for the Tamil language and culture while driving meaningful changes in how the club operated.

I introduced a structured approach to organizing monthly Tamil-related events, which ensured consistent engagement throughout the academic year. As part of my responsibilities, I frequently served as the Master of Ceremony (MC) in Tamil, an experience that helped me build confidence and polish my public speaking skills. Representing our language with pride became a source of motivation and growth. My passion for Tamil was the driving force behind all our activities, and under my leadership, Tamil Mandram earned a strong reputation on campus. For every major event organized by the college or student council, Tamil Mandram played a key role reflecting not only our hard work but also the widespread interest and enthusiasm we cultivated. We designed events rooted in Tamil culture but presented them in a fun, relatable way debates, oratory, performances, and competitions. Our aim was to make Tamil an immersive celebration, not just a language. These events engaged even those less fluent in Tamil. This journey also gave me the fortune of meeting my inspirational public speaker, Mrs. Jayanthishree Balakrishnan, who appreciated my Tamil oratory skills. Her recognition was a defining moment, reaffirming my commitment to this path and inspiring me to continue growing. In recognition of my four years of continuous contribution to Tamil Mandram, I was honored with the Student Recognition Award by my college during my final year. This award holds a special place in my heart as it acknowledged my leadership, dedication, and love for Tamil. Through this experience, I learned valuable lessons about leadership, planning, coordination, and staying true to one's passion. I had the opportunity to work with wonderful teams, overcome challenges, and witness how a shared vision can unite people. My advice to others is: "Follow your passion. Do what you love, and you will shine in your own unique way." No dream is too small, and when you dedicate your heart to something meaningful, success will naturally follow. Be proud of your roots and create your own path with confidence and courage.

ANANTHI K

SPORTS

MEDALS AND MILESTONES

National level Achievements :

- Secured silver medal in 33rd Junior South National Athletics Championship held at Guntur, Andhra Pradesh during 9 to 11 September 2022.
- Secured fifth position in 37th Nationals Junior Athletics Championship held at SAI stadium, Guwahati, Assam during 9 to 15 November 2022.
- Participated in All India Inter University Athletics Tournament held at Kalinga Institute of Technology, Bhubaneshwar, Odisha during 29 December 2025.
-

State level Achievements :

- Secured silver medal in Javelin and Shot Put in 36th TamilNadu Inter district Junior Athletics Championship during 16 October 2022.
- Secured gold medal in Javelin and Shot put in Anna University InterZone Athletics Tournament during first, second and fourth year of college.
- Secured gold medal in Javelin and Shot Put in Anna University Zonals Athletics Tournament for four consecutive years.
- Participated in the State level CM trophy Athletics Tournament held at Nehru Stadium, Chennai.

College level:

- Served as Joint Sports Secretary for 2 years during the academic year 2021 - 2023.
- Awarded as Individual Champion for Athletics for two years.
- Received Star Sports Person Award for two years.
- Won gold medal in Javelin and Shot Put in Centies Athletics Tournaments held at Coimbatore Institute of Technology, Coimbatore.

STUDENTS UNION

JOINT SECRETARY

Being a part of the student union was one of the most transformative experiences of my college journey. While many might associate such roles with event organizing, the reality was far more enriching and multi-dimensional. It became a crash course in leadership, planning, crisis management, communication, and collaboration — all essential skills that later translated seamlessly into my professional career.

One of the proudest chapters of my tenure was organizing Yukta, our flagship technical symposium. It wasn't just another event on the calendar — it became a benchmark for student engagement and turnout. Yukta witnessed the highest-ever participation from students across multiple colleges, and it was incredibly fulfilling to see our months of hard work pay off. From curating relevant technical events and hands-on workshops to ensuring smooth logistics, marketing, and sponsorship acquisition — the entire planning process was driven by student effort and collaboration. Managing a large team and aligning them with our collective vision taught me more than any textbook could.

In addition to Yukta, we also successfully conducted other marquee events like the iTech Expo and the Annual Day celebrations. The iTech Expo, in particular, allowed students to showcase innovations and live projects, creating a platform for real-time learning and exposure. Meanwhile, Annual Day brought together the entire institution in a vibrant display of cultural, academic, and extracurricular excellence.

These experiences gave me a rare "insider's perspective" of how an institution operates beyond the classroom. You start to understand how decisions are made, how teams must align with institutional values, and how crucial communication and coordination are when working across departments and stakeholders.

But here's something I've come to believe strongly: take up such a role only if you're genuinely open to learning, contributing, and growing. It's not just about the position or the title on your resume. It's about what you make of it — how you absorb the challenges, how you rally your peers, and how you leave a legacy that others can build on. The leadership you demonstrate and the systems you help create or improve will often outlive your time in college — and that's something truly powerful.

VISHNUPRIYA L

ACADEMIC PROFICIENY

CGPA | 9.3

Receiving the Academic Proficiency Award in Electrical and Electronics Engineering is a proud and emotional milestone for me. It is not just a recognition of academic success, but a reflection of how far I've come, especially considering how uncertain the journey felt at the start. In my second year, I was introduced to Circuit Theory, a subject that initially confused me deeply. I still remember struggling to grasp even the basics and, at one point, failing an internal test.

That moment was disheartening but also eye-opening. I decided to take ownership of my learning and made the most of the study holidays, turning to textbooks, video lectures, and handwritten notes. As I worked through the subject on my own, piece by piece, something shifted. Understanding began to grow, and with it, my confidence and interest. That turning point not only helped me master Circuit Theory but also sparked a genuine passion for electrical engineering.

This interest soon expanded into other core subjects like Electrical Machines and Transmission & Distribution, where I found joy in learning about how electrical power is generated, controlled, and delivered. What started as a challenge became a fascination that drove me throughout the rest of my academic journey.

While college life offers freedom, I've always believed that freedom comes with responsibility. I consistently attended classes without taking a single sick leave and maintained punctuality throughout. At the same time, I enjoyed campus life—chitchatting with friends and sharing light moments that made the experience memorable. I often studied not just for my own understanding, but with the intention of teaching concepts to my friends who found them difficult in class. Helping others not only strengthened my knowledge but also gave me a sense of purpose and teamwork.

In my later years, I developed a strong interest in the Electric Vehicle (EV) domain. I explored topics like electric drives and power electronics, and Testing of Electric Vehicles. These hands-on experiences helped me connect my academic knowledge to real-world innovations in clean energy and sustainable mobility.
This award stands as a symbol of perseverance, growth, and the power of self-motivation. From failing an internal test to excelling in my field, the journey has taught me that challenges can become stepping stones when met with dedication and a willingness to learn.

YOUNG INNOVATOR

My Innovation Journey

My journey as an innovator began with a passion for solving real-world problems and a drive to learn through hands-on experience. Over the years, I have participated in more than 15 national and international hackathons, winning top positions in five of them. Each event has been a stepping stone, helping me grow from a participant to a mentor, and eventually to an evaluator for the Smart India Hackathon (SIH) 2024.

Major Achievements

- Smart India Hackathon 2022 Winner

Developed an adaptive learning platform for students (software).

- Smart India Hackathon 2024 Winner

Created a water sanitation and E-coli detection kit (hardware).

- First Prize Pioneer Award

Won at the ST Microelectronics Innovation Fair.

- Smart India Hackathon 2023 Finalist

Recognized for innovative problem-solving.

- Evaluator for Smart India Hackathon 2024

Selected to mentor and evaluate India's brightest young minds.

Global Hackathon Highlights

- UNESCO Indo-Africa Hackathon (International) Finalist

Collaborated with global teams to address cross-continental challenges in education and healthcare.

- India-Japan Hackathon (IIT Gandhinagar) Finalist

Worked on international projects fostering collaboration between Indian and Japanese students.

- Finalist, Capture the Flag by Ministry of Electronics and Information Technology (MeitY)

Demonstrated cybersecurity and problem-solving skills on a national platform.

- **GDSC WOW Finalist**

Showcased innovative solutions in a global developer community.

Innovation Beyond Hackathons

- Patent Holder

Filed and published a patent:
"Real-Time Health Monitoring and Emergency Alert System for Enhanced Safety and Wellbeing of Elderly People"
(Patent Office Journal No. 04/2025, dated 24/01/2025).

- Research Author

Published and presented a paper on health monitoring for wheelchair patients at ICSSEECC 2024.

Empowering the Next Generation

As the founder of Challenge Chazers, I have built a community of 2000+ students on WhatsApp and12000+ followers on Instagram, reaching over 11,00,000 people monthly. My mission is to bridge the information gap and empower students with opportunities in hackathons, internships, and career growth.

Each milestone—whether as a participant, mentor, evaluator, inventor, or community builder—has strengthened my commitment to creating impactful solutions and inspiring others to innovate.

YOUNG RESEARCHER

During my undergraduate journey at PSG Institute of Technology and Applied Research, I immersed myself in research across electric vehicles, power electronics, battery management systems, and machine learning. This passion led me to publish two research papers and a book chapter, and submit six additional papers, ultimately earning me the prestigious **Young Researcher Award** from my institution. These experiences not only deepened my technical foundation but also shaped my identity as a hands-on, innovation-driven engineer.

Among my published works, **"AI-Enhanced PFC Control for EV Charger Using Boost Converter"** proposed a novel AI-based control method to improve energy efficiency and reduce harmonic distortion in EV chargers. Another, **"Smart Security Alert System,"** presented a real-time embedded system using sensors and GSM modules for critical alert applications. I also co-authored a book chapter titled **"International and Indian IoT Standards Used in Different Applications,"** which explored how standards shape IoT deployment in sectors like healthcare, agriculture, and smart cities.

As my interest grew, I submitted multiple papers that further pushed the boundaries of what I had learned. One of my key submissions was on **temperature forecasting using GRU-LSTM hybrid models**, where we analyzed 22 years of climate data across five Indian states and demonstrated the model's superior accuracy. In another, I developed a functional BMS prototype using op-amps (LM741), NPN/PNP transistors, and a PIC16f877a microcontroller to monitor lithium-ion battery cells and support top-cell charging via Bluetooth communication. I also worked on an **automated face mask detection system** using CNN, YOLO, and ensemble learning on Raspberry Pi, enabling real-time identification in both static images and video streams.

In the renewable energy domain, I contributed to a paper focused on **solar PV monitoring**, where we built a 1 kW LabVIEW-based emulator and applied machine learning to analyze performance under partial shading, achieving up to 83% efficiency. My most recent submissions addressed **cell balancing in EVs**: one explored optimized balancing based on SoH, temperature, and time; the other proposed a hybrid strategy combining active and passive balancing to improve battery safety, efficiency, and longevity.

These projects, developed under the guidance of Dr. C. S. Subash Kumar and Mr. S. Ravikrishna (**Fuel Cell Systems**) and Dr. A. Jeyashree (**BMS Development**), gave me hands-on exposure to MATLAB simulations, embedded system design, PCB fabrication, and data-driven decision-making. More importantly, I gained skills in technical writing, leadership, and collaboration across interdisciplinary teams.

The outcomes of this journey have been incredibly rewarding: I was selected as a Research Scholar at **IIT Bombay** in the area of BMS, secured a campus placement, received an internship offer from **DRDO**, and earned admission to the **University of Texas at Dallas (UTD)** for an MS in Electrical and Electronics Engineering, specializing in Power Electronics. These achievements reflect not only my academic growth but the practical, impactful learning that shaped my vision as an engineer driven by innovation and sustainability.

AAKARSHNA K

DEPARTMENT

BEST OUTGOING STUDENT

A Journey I'll Cherish

When I first heard about the Best Outgoing Student Award in my early college days, a quiet voice inside me said: If I ever receive this, it should be because I followed my heart—not just a checklist. I didn't want to chase it for the sake of fulfilling criteria. I wanted it to be a reflection of what I genuinely loved doing. Now, having received this award, I feel deeply humbled, happy, and above all, grateful. It's a reminder that staying true to yourself does lead somewhere meaningful.

What contributed most to this recognition, I believe, was my consistent involvement across multiple areas - academics, research, leadership, mentoring, and co-curriculars. But more than that, it was the intent behind everything - working without having expectations on the outcome, giving the best to grow, contribute, and challenge myself and kept showing up, even after setbacks, with a strong purpose and a grateful heart. I embraced every opportunity - big or small - and learned from both success and failure.

There were many defining moments, but being part of Velocita, my NCC journey, and balancing it quite well with academics and other responsibilities stands out. It made me realize the importance of coming out of our comfort zone and taught people skills, time management, and the importance of being present and dependable. I learned to handle situations calmly, make decisions thoughtfully, and value relationships deeply. There were times I struggled to manage everything, but I never wanted to compromise one for the other. I improved, adapted, and kept going.

The support I received from my faculty, mentors, friends, and family was incredible. They believed in me even before I did. Their encouragement, guidance, and constant presence gave me the strength to push my limits and stay grounded.

To me, this award is not just a personal milestone—it's a symbol of gratitude for a journey that shaped me. If I could speak to my first-year self, I'd say: You can and you will. Just keep going. Be true to yourself, trust the process, and be sure of your intent. One lesson I would like to carry forward is that: **The universe always stays in love with a stubborn heart**. Be stubborn about your growth, your values, and your purpose. Give your best, stay patient, and let life unfold.

ANANTHI K

OVERALL

BEST OUTGOING STUDENT

A Journey of Growth and Gratitude

Being named the Best Outgoing Student of 2024-2025 is a moment of immense pride and gratitude for me. This recognition is not just a reflection of my academic and extracurricular achievements, but a celebration of the journey, the people, and the experiences that shaped me during my time at PSG Institute of Technology and Applied Research.From the very beginning, I was fortunate to be surrounded by inspiring seniors, supportive faculty, and encouraging peers.

Their belief in me helped me push my limits and strive for excellence. I feel truly grateful. This award is a testament to the hard work, perseverance, and the unwavering support I received from my mentors and family.

One of the most defining experiences of my college life was serving as the Joint Sports Secretary in my first year. It taught me invaluable lessons in leadership, teamwork, and responsibility. My passion for Javelin throw was nurtured by the excellent infrastructure and encouragement provided by the college.

I owe a great deal to my teachers who recognized my potential early on and motivated me to pursue both my academic and athletic goals with dedication. I would like to express my heartfelt thanks to my college management, Dr. C. L. Vasu, Dr. A. Robinson, and all the faculty members and staff of the EEE department. Your guidance and encouragement have been instrumental in my growth.

I am also proud to share that I have been placed at Schneider Electric, a global leader in energy management and automation. This opportunity is a reflection of the strong foundation laid by my department and the holistic development I experienced at PSG iTech. The placement process taught me the importance of perseverance, adaptability, and continuous learning, skills that I will carry forward into my professional journey.

I am equally thankful to my seniors, juniors, and friends who stood by me through every challenge and triumph. As I step into the next chapter of my life, I carry with me not just a degree, but a treasure trove of memories, lessons, and relationships that I will cherish forever. My future plan is to start a coaching centre for athletes and pursue higher studies in electrical engineering, eventually leading to a startup. Thank you, PSG iTech, for being the foundation of my journey.

MESSAGE *from the* EDITORIAL TEAM

This magazine was never meant to be just a collection of articles, it was our way of giving back. We wanted it to reflect our journey meaningfully and to serve as a genuine resource for our juniors and the department.

From the beginning, every page was curated with thought and purpose. We wanted it to carry the essence of what these four years meant to us not just as students, but as individuals who grew, stumbled, learned, and evolved together.

We're especially grateful to everyone who contributed their experiences from various activities. They didn't write out of formality, they shared with gratitude and honesty, with the hope that what helped them might help someone else too. Their sincerity is what made this magazine truly valuable.

Thank you to all who supported us, faculty and friends. Every message, moment, and detail shared here was chosen with care, and this magazine is a result of that collective effort. Above all, this stands as a tribute to our college and especially to the faculty mentors who guided us, believed in us, and helped shape who we are today.

We hope this magazine finds its place on a shelf, in a hand, or in a heart—whenever someone needs a reminder that they're not alone on this path.

Warm regards,
Aakarshna K & Dharsana J
